LIST OF ABBREVIATIONS

ARC – Architectural Research Consultants, Incorporated

A/V – Audio/visual

CIP - Capital improvement projects or plan

 CO_2 – Carbon dioxide

EdSpec – Educational specifications

ELL – English language learner

FAD – Facility adequacy database

FMP - Facilities master plan

FCI – Facility condition index

GSF – Gross square feet, or the sum of net assignable square feet plus all other building areas that are not assignable (the area remaining is called "tare," which includes areas such as hallways, mechanical areas, restrooms, and the area of interior and exterior walls)

HVAC – Heating, ventilating, air conditioning

IEP – Individualized education program

IT – Information technology

JPTA – J. Paul Taylor Academy

LCD - Liquid crystal display

LCPS – Las Cruces Public Schools

LTSP – Linux Terminal Server Project

MAP – Measure of Academic Progress

MEM – Membership, number of students in funding formula

NASF – Net assignable square feet, or the total of all assignable areas in square feet

NMAC – New Mexico Administrative Code

NMCI – New Mexico Condition Index

NMELPA – New Mexico English Language Proficiency Assessment OS – Operating system

PC – Personal computer PE – Physical education

PED – New Mexico Public Education Department

PPM – Parts per million

PSCOC – Public School Capital Outlay Council

PSFA – Public School Facilities Authority

PTR – Pupil/teacher ratio

RTI - Response to Intervention

USB – Universal serial bus

 $\mathsf{VAC}-\mathsf{Volts}\;\mathsf{AC}$

VPN – Virtual private network

WAP - Wireless access point

INTRODUCTION

This document is a Facilities Master Plan (FMP) and Educational Specifications (EdSpec) for J. Paul Taylor Academy Charter School (JPTA), a state-chartered public school. The intent of the plan is to guide capital planning decisions that support the charter school's educational mission and that meet minimum state adequacy standards for school facilities. The Public School Capital Outlay Council (PSCOC) and the Public School Facilities Authority (PSFA) require that all New Mexico public charter schools have a fiveyear FMP and EdSpec as a prerequisite for eligibility to receive state capital outlay assistance. This master plan and educational specifications is in accordance with guidance issued by the PSCOC and PSFA.

The combined FMP and EdSpec identify specific current and projected facility needs to accommodate the charter school's anticipated five-year enrollment, and to forecast strategies and required resources to implement those facility needs. The document is a flexible facility planning tool that the school can revise on a periodic basis as conditions change.

Five main sections and this introduction comprise the master plan and educational specifications:

- Introduction
- Section 1 Goals / Process provides information about the charter school's goals and the planning process
- Section 2 Existing and Projected Conditions provides information about programs and delivery methods, enrollment, details about the school's existing facilities, and technology and energy management. It outlines facility goals and concepts, details space needs and other facility requirements, and describes strategies for implementing space needs.
- Section 3 Facility Requirements contains facility goals and concepts, lists and diagrams specific facility needs to accommodate projected enrollment, and identifies how the school will implement facility needs over time
- Section 4 Capital Plan provides information about capital resources, capital needs, project priorities, and capital project implementation
- Section 5 Master Plan Supporting Material contains detailed information about school facilities, evaluations, plans, and other information

This page is intentionally blank.

GOALS / PROCESS

1.1 GOALS

1.1.1 J. Paul Taylor Academy Mission

J. Paul Taylor Academy, in alliance with families at the school and community, will offer a rigorous, well-rounded, dual language, project-based instructional program in a smaller school to promote academic excellence for the diverse students of the Las Cruces area. The school intends to target underserved populations within the low income, ethnic minority, and English language learning categories.

1.1.2 Educational Philosophy¹

Child Centered / Hands-on Learning - It is the belief of the J. Paul Taylor Academy founders that children are more successful in an environment in which they are fully engaged in their own learning and where they interact with other students to achieve goals and acquire knowledge. The school will be very child-centered with hands-on learning. The curriculum will focus on mastery of basic competencies which will be applied to projects generated by teacher and students.

Bilingual - J. Paul Taylor Academy founders believe children will need dual language skills to be more successful in their lives. A dual language program is imperative in preparing students for success in a diverse global society. It is recognized that languages are more easily learned at an early age, making elementary school the perfect vehicle for this instruction. Acquiring a second language will not only enable children to participate more fully in our global economy, but will also demonstrate the value of New Mexico's two dominant languages [English and Spanish].

Family Participation - J. Paul Taylor Academy founders believe that families are children's first and most important teachers and therefore will strongly encourage families to take an active role in their child's education. This participation will be planned according to the time constraints and abilities of each individual family member.

1 From J. Paul Taylor Academy charter application, submitted 2010

Community Involvement - Community involvement will enable additional opportunities for students to apply their learning and to connect that learning to life beyond the school walls. This interaction with the community will be through guest instructors, student mentors, field trips, and project and presentation evaluators.

Project-based - Research suggests that there is a relationship between the role that children have in determining their own learning experiences and the development of social skills. Students learn by doing. J. Paul Taylor Academy founders believe that children learn best what most interests them and it is our goal to make learning meaningful and exciting for all of our students. Projects foster vital workplace skills and lifelong habits of learning. They allow teachers to use resources from the community to move project boundaries beyond the school walls.

School Size - J. Paul Taylor Academy founders believe a smaller school size (maximum 300) allows for community connectedness and enhanced student achievement. Students who, as a rule, struggle with academics or come from challenged socioeconomic backgrounds, benefit the most from smaller schools.²

1.1.3 Serving the Community

The J. Paul Taylor Academy will serve Las Cruces area children. It proposes to meet the unique needs of the local school community which include many families within the low income, ethnic minority and English language learning categories. The Academy proposes to address these needs by providing a smaller learning environment, incorporating project-based learning for mastery of curriculum, implementing dual language and enhancing family involvement and interaction with the community.

The J. Paul Taylor Academy will actively seek the community's involvement, specifically, the New Mexico State University Music and Physical Education Departments. Both have committed to placing practicum students in the school and will incorporate music, dance, movement and other physical education topics that typically receive less attention.

Administration and staff of J. Paul Taylor Academy will provide opportunities for family and community involvement bimonthly to

2 Matthew Project, Raywid, and Leithwood and Jantzi, 2009

build school community as documented by attendance logs and photos, demonstrating at least 25% involvement of families with children attending the school the first year, growing to 75% by the fifth year.

1.1.4 Statewide Adequacy Standards

New Mexico's statewide adequacy standards for primary and secondary educational facilities (NMAC 6.27.30) provide standards for public school districts to "... provide and sustain the environment to meet the needs of public schools." They are intended to create a minimum facility standard to establish equity among all educational facilities that serve New Mexico public school students. Alternative and charter schools may seek a variance for facilities, since they do not necessarily conform to the programs, delivery methods, and facility needs and budgets on which these standards are based. In such cases, schools meet the intent of the facility requirements through "alternative methods." However, alternative and charter schools must provide the minimum square footage allowances for general classroom spaces, as identified in the adequacy standards. Section 3.2.5 Space Needs indicates conformance with adequacy standards for minimum square footage per student.

Implementation of space needs of the J. Paul Taylor Academy will meet the following required standards, listed below with statute section citations in parentheses:

6.27.30.8 General Requirements

- Building structural soundness (A.1)
- Weather-tight exterior envelope (A.2)
- Interior surface condition (A.3)
- Interior finish harmful elements (A.4)
- Building system integrity (B.1)
- Plumbing type / accessibility (B.2)
- Adequate fire alarm system (B.3)
- Adequate two-way communication system (B.4)

6.27.30.10 Site

- Student drop-off pedestrian pathway (A)
- Protection of building structural integrity (C)
- Potential of flooding, ponding, or erosion (C)

6.27.30.12 Academic Classroom

- Appropriate size (A)³
- Lighting (C)
- Temperature range (D)
- Acoustics (E)
- Air quality (CO₂ PPM) (F)

³ See Section 2.3.3 for a description of compliance with requirements for square feet per student

1.15 Adoption of Facilities Master Plan

Exhibit 1-1 Confirmation of Board Adoption of FMP

To come

1.2 PROCESS

1.2.1 Data Gathering and Analysis

ARC worked with a steering committee, comprised of charter school founders, members of the administration and governance council to understand and document the charter school's programs and delivery methods, and to establish facility needs to support the charter's educational requirements. ARC and the steering committee held workshops for information sharing and feedback after each phase: the data-gathering phase, the space needs determination phase, and the facility implementation phase. The steering committee reported all process decisions to the governance council.

1.2.2 Authority and Facilities Decision Making

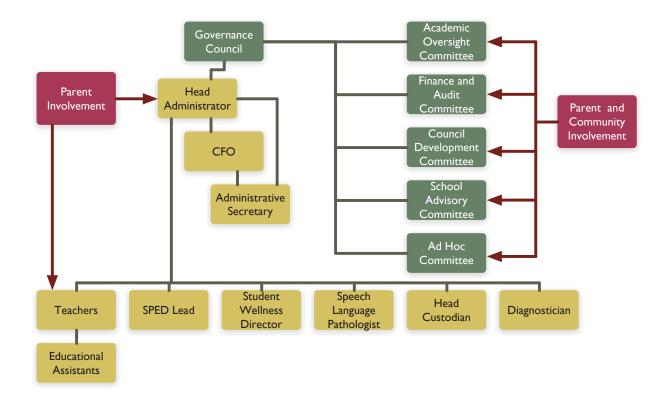

The governance council is the central focus of the governance of J. Paul Taylor Academy. The council is responsible for ensuring adherence to all laws, formulating policy, approving the budget and hiring the head administrator. Committees who will prepare reports and make suggestions to the governance council include, but will not be limited to, the academic oversight, the finance and audit, school advisory and the council development committees. The head administrator will be a member of all permanent committees. The council will strongly encourage teachers to participate in these committees to ensure they have a voice and can make reports from their school curriculum meetings as well as express needs they experience in executing their jobs. Since the FMP/EdSpec process took place during the planning year, before operations commenced, steering committee meetings included concerned and involved participants who were available.

1.2.3 Community Involvement in Decision Making

Parents and community members can hold a direct leadership position and influence decisions regarding school facilities by serving on the governance council or one of the advisory committees.

See Exhibit 1-2 for an organization chart that illustrates opportunities for parents and community members to participate in decision-making processes.

This page is intentionally blank.

EXISTING AND PROJECTED CONDITIONS

2.1 EDUCATIONAL PROGRAMS AND DELIVERY SYSTEMS

2.1.1 Programs Overview

Organization

JPTA commenced operations in summer 2011, providing programs to students in kindergarten through 6th grades. It plans to grow enrollment through 8th grade within the next two years of operations.

Instructional Environment

Although students are enrolled by grade and spend time at the beginning and end of each day in grade-level home rooms, the entire school functions as a community and students in various grades interact through skill-level instruction and project-based hands-on activities.

2.1.2 Programs Provided

JPTA provides all elementary school core courses: English, mathematics, science, and social studies as well as physical education, music, art, and language. Each activity and/or assignment is coded to the New Mexico benchmarks and performance standards.

2.1.3 Delivery Systems

Classrooms

The school delivers programs in classroom settings. It places children in fluid groups created by the teachers in response to needs identified by short-cycle assessments, such as the Measure of Academic Progress (MAP). The school will formally review groups monthly to ensure each child is working on his/her specific needs and that he/she is sufficiently challenged. This EdSpec refers to these classroom groups as "skill level" classes. When the school grows to include middle school grades, elementary and middle school students will share common facilities.

Block Schedule

The school delivers mathematics and language arts in block

schedules daily, while it delivers the other core subjects heterogeneously (in mixed grades) through project-based instruction in blocks. It delivers PE and music in larger mixed grade groupings. A student may potentially use several rooms a day, depending on skill level needs.

Schoolwide Project Based

Each school semester will feature a schoolwide project for each skill-based group to produce with skill-level-appropriate scope and activities. While the focus will be on the central topic, the school will add related activities to project activities to ensure that the standards and benchmarks for each grade level are addressed. Most projects will be schoolwide, but grade-level or multigrade-level projects that do not involve the whole school may be included.

Meals

In a permanent facility, meals will ideally be prepared on site and delivered in a multipurpose room. Several grades (although not the entire school) will share lunch period and eat in the same multipurpose room.

Media Center

JPTA considers literacy a critical aspect of the school's mission and will therefore strive to provide a media center at the permanent facility.

Special programs

JPTA intends to include a space in the permanent facility for a multipurpose venue for activities such as music and indoor physical education, as well as to accommodate larger gatherings and project implementation activities.

Technology

Some desktop computers will be available in each classroom. Classes will share mobile laptop carts to provide online and program access at times of greater demand.

Student Health Center

The student health center houses a full-time nurse.

2.1.4 Special Populations

Special Education Population

JPTA will provide services for those students who are already identified as eligible for special education eligible and have current IEPs. Students who do not reach success in Tier 2 instruction will be referred to Tier 3 and a multidisciplinary assessment to determine their needs. The school has a certified Special Education lead/teacher on staff to ensure that services and instruction listed in the student's IEP are appropriate for the student's needs and that these services and instruction are delivered. The school provides facilities on site to accommodate special education services and service providers.

ELL Population

For all students whose response to the home language survey is other than English, the school will administer the New Mexico English Language Proficiency Assessment (NMELPA) or other test required at the time. J. Paul Taylor Academy offers a dual language program beginning with kindergarten during the first school year and continuing thereafter, adding one dual language classroom per school year. Staffing will determine the final design of the program, but JPTA anticipates a model in which teachers divide into pairs, with one teacher responsible for English instruction and the other for Spanish language instruction. This model will enable more children to receive this benefit, even although not all teachers are bilingually certified. There will be no separate classrooms for ELL students. ELL students in grade levels not yet served by a dual language program will have their English language needs met by an endorsed Teaching English to Students of Other Languages (TESOL) teacher or a bilingually certified teacher in the school.

Low Income Population

For children from impoverished backgrounds, teaching must be made relevant to the children. These children must develop and maintain resiliency, and the ability to recover from setbacks. In studies of children who demonstrate resiliency, Garmezy (1983) found that successful students in high-poverty areas demonstrated the following common characteristics: good social skills, positive peer interactions, a high degree of social responsiveness and sensitivity, intelligence, empathy, a sense of humor, and critical problem-solving skills and positive attitudes. Teacher/student interactions and the structure of the classroom environment are also factors in student success. Project work provides opportunities to build resiliency skills and positive attitudes.

2.1.5 Alternative Methods

JPTA intends to provide spaces to accommodate all planned programs within the school facilities. No alternative methods will be necessary at the permanent facility.

2.1.6 Anticipated Changes in Programs

As indicated in enrollment information in Section 2.2, JPTA started its first year of operation in 2011-12 with grades kindergarten through 6th. With the addition of 7th and 8th grades in subsequent years, programs will be tailored toward anticipated skill levels specifically for those grades.

2.1.7 Schedule

JPTA is a year-round school, commencing the first semester in July. Full school days are held on Monday through Friday. Students gather in home room (grade level) groupings at the beginning of the day for breakfast and practicing conversation. The balance of the morning is split into two instructional blocks, the first for language arts and the second for mathematics. Students return to home room groups for lunch and walking/conversation activities. The afternoon is dedicated to project-based instruction that integrates core subjects, PE, music, and art.

The daily schedule is:

Home room for breakfast
Language Arts block, currently nine skill-level
groups
Recess
Math block, currently seven skill-level groups
Lunch and walk, two groupings
Projects, PE, music, RTI, and ancillary services
Recess
Projects, PE, music, RTI, and ancillary services

After-school programs include clubs, tutoring, and outdoor athletics for students, and classes, meetings and other activities for community members.

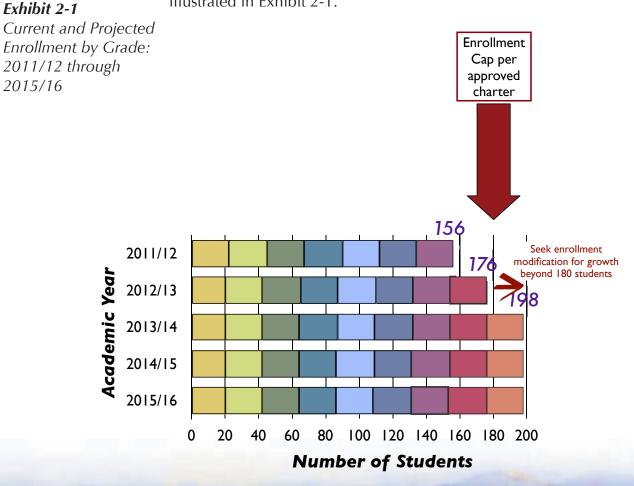

2.2 ENROLLMENT

2.2.1 Historic and Current Enrollment

JPTA commenced operations in July of academic year 2011/12 with a 40th day total enrollment of 156 students in kindergarten through 6th grades.

2.2.2 Projected Enrollment

The approved charter application allows for an enrollment cap of 180 students in kindergarten through 8th grades, with growth continuing from the current initial year incrementally through 2013/14 with 20 students in kindergarten each year and 6th grade progressing through 7th and 8th. Before the third year of operations, when the enrollment, projected to reach 196 students, exceeds the approved enrollment cap, the school will need to seek an enrollment modification. JPTA is committed to remaining a small school, and will hold enrollment at one class for each grade into the future. Current and projected enrollment is illustrated in Exhibit 2-1.

2.2.3 Classroom Loading Policy

The approved charter application identifies pupil/teacher ratio (PTR) standards over the five years of initial charter operations not to exceed the following:

- 20 : 1 with all certified teaching staff, not including contracted services
- 15:1 with all certified and classified teaching staff

The document does not discuss classroom loading policies, but participants in steering committee meetings discussed the desire to keep class sizes flexible to the maximum allowable by PED (20 students in kindergarten, 22 students in 1st through 3rd grades, 24 in 4th through 8th grades). First year enrollment numbers exceed these limits in kindergarten, and 1st and 3rd grades, but PED issued a waiver for academic year 2011-12.

2.2.4 Student Origination

ARC used student addresses to map the origins of registered JPTA students. In its initial year of operation, the school has a broad reach, with students attending from throughout the Las Cruces Public School district. See Exhibit 2-2 for a map of student origins.

2.2.5 Classroom Needs

In order to accommodate programs according to the school's planned delivery methods, JPTA will need a total of seven general classrooms for the first year enrollment. When the school reaches maximum planned growth, it will need a total of nine general classrooms. Exhibit 2-3 shows the changing need for classrooms as well as the need for other types of instructional spaces.

Exhibit 2-2 Map of J. Paul Taylor Academy Student Origins

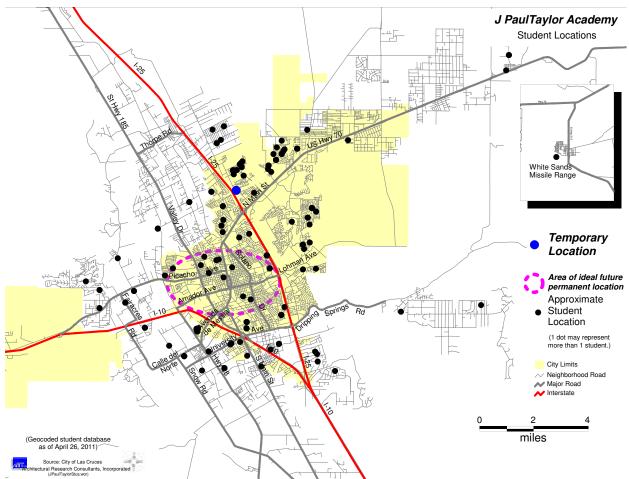

Exhibit 2-3

Chart of Current and Projected Classroom Demand: 2011/12 Through 2015/16

	2011-12 Enrollment 156	2012-13 Enrollment 176	2014-2016 Enroliment 198	2016 + Enrollment 198

J. Paul Taylor Academy Charter School Facilities Master Plan and Educational Specifications ARC 21022

2.3 SITE AND FACILITIES

2.3.1 Temporary Location

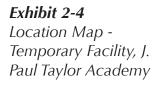

The J. Paul Taylor Academy began operations in a temporary facility in July 2011. Although the facility is not in the ideal location according to the facility goals of the steering committee, the property was immediately available and meets the requirements for House Bill 283 for new charter school facilities, as determined by an assessment conducted by PSFA personnel in June 2011.¹

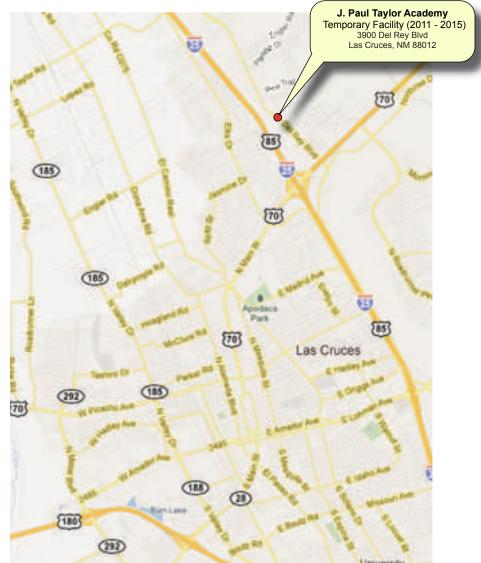

The property has the capacity to accommodate current and proposed enrollment (with proposed modifications) for the next two to five years, at which time JPTA will be due to renew its charter. At this time, further requirements of House Bill 283 will take effect and the charter school will have taken the necessary steps to locate in a permanent facility.²

The location of the current temporary facility is 3900 Del Rey Boulevard, Las Cruces, NM 88012 and is shown in Exhibit 2-4.

¹ House Bill 283, Section 2.C. - On or after July 1, 2011, a new charter school shall not open and an existing charter school shall not relocate unless the facilities of the new or relocated charter school, as measured by the New Mexico condition index, receive a condition rating equal to or better than the average condition for all New Mexico public schools for that year.

² House Bill 283, Section 2.D. - On or after July 1, 2015, a new charter school shall not open and an existing charter shall not be renewed unless the charter school: (1) is housed in a building that is: (a) owned by the charter school, the school district, the state, an institution of the state, another political subdivision of the state, the federal government or one of its agencies or a tribal government; or (b) subject to a lease-purchase arrangement that has been entered into and approved pursuant to the Public School Lease Purchase Act; or (2) if it is not housed in a building described in Paragraph (1) of this subsection, demonstrates that: (a) the facility in which the charter school is housed meets the statewide adequacy standards developed pursuant to the Public School Capital Outlay Act and the owner of the facility is contractually obligated to maintain those standards at no additional cost to the charter school or the state; and (b) either: 1) public buildings are not available or adequate for the educational program of the charter school; or 2) the owner of the facility is a nonprofit entity specifically organized for the purpose of providing the facility for the charter school.

Map courtesy of Google Maps

2.3.2 Temporary Site³

The boundaries of the temporary campus are to the south by Settlers Bend Road, to the west by Del Rey Boulevard, to the north by vacant land owned by the same property owner, and to the east by residential properties. The site includes a building of approximately 7,100 gsf, three single classroom portable buildings totaling approximately 2,530 gsf on loan from the Las Cruces Public Schools (LCPS), a play area with play equipment, approximately 15,700 gsf of parking and maneuvering area, and drop-off drive. See Exhibit 2-5 for an aerial view of the site. The property line is the "effective" property boundary which the property owner allows the school to use. The school can expand it to include additional land when it needs more portables.

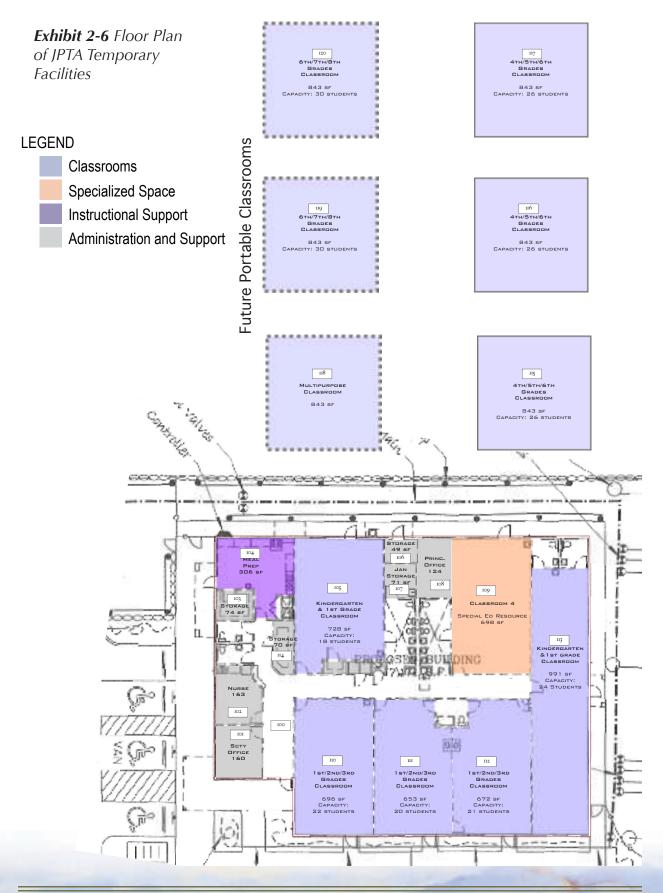

3 Ibid.

Aerial view courtesy of Google Maps

2.3.3 Temporary Facility

The facility is a one-story building, constructed and formerly used as a day care center. The usable space in this facility is augmented by three portable classroom buildings of approximately 843 sf each which are leased from LCPS and adapted to the site by the property owner for this immediate purpose. JPTA plans to install three additional portable classrooms before the end of calendar year 2011 to provide space for delivering programs such as music, media center, and indoor multipurpose activities. Exhibit 2-6 illustrates the use and size of spaces.

2-11 October 2011

2.3.4 Facility Evaluation

2.3.4.1 Inspection by PSFA

On June 2, 2011, PSFA staff visited the facility at 3900 Del Rey Boulevard, Las Cruces to conduct an adequacy analysis, facility condition assessment, and change of occupancy analysis. The following are excerpts quoted from the findings of this visit.

Adequacy Analysis

Facility

- Based on visual inspection, only, the building appears to be structurally sound.
- The exterior envelope appears to be weather tight.
- Because this facility was recently constructed, it is highly unlikely that lead, asbestos or other harmful materials are present.
- The electrical and plumbing systems appear to be functioning normally, as did the fire detection and HVAC systems. The fire suppression system is a wet system. The suppression system was not tested, but, given that this facility was recently constructed, it is assumed to be in good condition.

• A two-way communication system is a feature of this building. **Site**

- There is the ability to provide a student drop-off and pedestrian pathway on site.
- Site drainage appears to be adequate to protect the structural integrity of the building.
- No evidence of past flooding, ponding or erosion on the site was observed.

Change of Occupancy Analysis

- Building is fully sprinkled. No additional fire protection requirements are applicable.
- No required changes to the exiting system are anticipated
- The facility complies with allowable heights and areas for an E occupancy for Type V-A construction, and is eligible for allowable area increases due to frontage fire sprinkling.
- The facility is handicapped accessible, with the exception of signage.

Concerns

• The primary concern with regard to this facility is that a change of occupancy is required prior to JPTA occupying the building.

Assessment documents completed by PSFA staff are in Section 5 Master Plan Support Material.

2.4 UTILIZATION AND CAPACITY

2.4.1 Utilization

Utilization analysis identifies existing classroom use and the number of classrooms that accommodate current student enrollment. Section 5 Master Plan Supporting Material includes a PSFA's utilization analysis form, completed with current data.

2.4.2 Capacity

A school's stated delivery methods, usually expressed in terms of classroom loading and PTR, determine the capacity of a charter school facility. The New Mexico Public School Facility Adequacy Standards require a minimum of 50 square feet per student for kindergarten, 32 square feet per student for elementary school classrooms, and 28 square feet per student for middle school classrooms (when the school reaches maximum enrollment, it will educate students from kindergarten through 8th grades). JPTA's delivery model is skill-level based and students spend their day in various rooms with mixed grades. Therefore, PSFA has allowed compliance with adequacy standards with regard to square feet per student for kindergarten classrooms to be an average of the kindergarten standard (50 square feet) and primary standards (32 square feet). The resulting average is 41 square feet per student. This averaged standard applies to two classrooms shared by kindergarten, 1st and 2nd grades. The capacity analysis, illustrated in Exhibit 2-7, reflects the current capacity of 170 students, as well as the near future condition with additional portables, for which the capacity will be 214 students.

Capacity of JPTA Temporary Facilities

2.5 TECHNOLOGY

2.5.1 Technology Use

In the educational setting, technology allows students to practice computer skills, do research, work on projects, and make presentations. Technology will be one of the individualized instructional tools for those students who need extra practice or enrichment.

2.5.2 Technology Implementation

Furnishing an entire school with a new computer network can be unaffordable for a start-up school. However, JPTA has found ways to bring technology into the classroom at a lower cost.

Operating System

The first step in reducing the cost for technology is to use a free operating system (OS) instead of paying for a Microsoft or Macintosh OS. JPTA chose as its network Ubuntu's Edubuntu OS, which runs in conjunction with the Linux Terminal Server Project (LTSP).

"Edubuntu's objective is to create an integrated and usable experience for educational users by enhancing Ubuntu with educational applications, tools, content, and themes." (Edubuntu, para. 1,2007) Ubuntu is the most popular version of Linux currently offered.⁴ The OS typically has two major releases a year and supports each version for a full 18 months. Users can download free upgrades from the Internet and easily install them.

The benefit of LTSP is that applications reside and run on the LTSP server, rather than on individual workstations. LTSP allows schools to use smaller, less expensive "thin" client computers, which depend heavily on the server to fulfill their functions. These computers display the output of applications and control keyboard, mouse, sound and display functions. They "boot" off the network rather than an internal hard drive. It is easy to replace a malfunctioning thin client since they have no software to install. As well, any computer that can boot from the network could be used with LTSP, which would also allow JPTA to use older personal computers.

4 Distro Watch. com, January, 2011

Software

JPTA can also save on software costs with Edubuntu and LTSP by using of Sun Microsystems' free Open Office Software instead of software such as Microsoft Office 2007. The school also has access to many educational programs contained in Edubuntu. These educational programs serve students from pre-K to the 12th grade. Edubuntu also includes the program iTalc, which allows teachers to monitor student screens from their own workstations, unlock programs, power off workstations, and run programs on their workstations and student workstations simultaneously.

Equipment

Thin clients will save JPTA money because they are less expensive than regular computers. As well, netbooks are another option for workstations and have small keyboards that are highly suited for elementary students. They would connect to the LTSP server either via a network boot-up or with an Ubuntu USB key. The size of the netbook allows it to fit easily on the smaller desks and tables in elementary schools. By its third year, JPTA plans to create two to four laptop "carts" to store 20 netbooks and accessories, which will allow classrooms to easily share computers. Netbooks would run on batteries charged while on the carts, and would not require power cables.

Security

Security will include individual sign-on / login names and passwords. Additional group security will allow access for students to only their own individual information, for teachers to grade books and student information, and for administration to administrative data. Ubuntu's firewall prevents access from outside the school, although it may allow remote access via a secure virtual private network for teachers, administrators and information technology volunteers approved by the JPTA head administrator.

Technology Type and Costs

The following table shows JPTA's technology inventory.

Exhibit 2-8 Table of JPTA Technology Inventory

2.6 ENERGY MANAGEMENT

2.6.1 Energy Management Plan⁵

Vision Statement

Recognizing that building system energy usage impacts the school's ability to meet educational missions and be fiscally responsible, JPTA will minimize our energy consumption at our current leased and future owned facilities, while maintaining a comfortable and effective learning environment. By employing common-sense conservation guidelines and implementing behavioral solutions in both classrooms and operations while in leased facilities, and additionally through facility capital investments in energy efficiency when in an owned facility, we will measurably demonstrate continuous improvement in energy-use reduction and energy conservation awareness.

Proposed Policy Statement

The governing board of the J. Paul Taylor Academy Charter School is committed to the efficient use of energy resources, the protection of the environment, and the responsible employment of those financial resources which are devoted to our energyrelated budget. Every employee, student, and facility user is expected to contribute to energy efficiency by developing their own awareness of the need to conserve energy and by being an "energy saver" through their judicious use of energy. The school will address the following:

Further policy measures

In leased and owned facilities: This policy will be implemented in both leased and owned facilities.

In owned facility: the charter school will draft an energy conservation policy that will govern capital improvements to the owned facility to improve energy use and greenhouse gas reduction.

Goals and Tasks

Goal 1 - Reduce energy consumption and green house gas emissions at any facility occupied by JPTA through implementation of behavior modification programs. Task 1a - Draft an energy-use behavior policy to include in JPTA's operating policies, including standards such as

The energy management plan has not yet been adopted by the Board of Directors

turning off lights in unoccupied rooms, shutting down all electronic devices at the end of every day, keeping thermostats at an agreed-upon level during the school day, and lowering temperature settings during unoccupied hours.

- Task 1b Create an action plan to implement identified behavior modification strategies.
- Goal 2 Raise awareness among staff and students regarding the need to use energy responsibly.

Task 2a - Establish an energy-awareness program that provides training for personnel and educational opportunities for students.

- Goal 3 Realize energy savings through facility retrofits (owned facility only).
 - Task 3a Determine where energy savings can be most effectively and affordably realized through completion of an energy audit upon occupancy of the owned facility.
 - Task 3b Create implementation strategy for energy savings and establish exact energy reduction targets based on energy audit.
 - Task 3c Establish a capital plan to affordably implement identified capital projects that will achieve the energy reduction targets.

This page is intentionally blank.

FACILITY REQUIREMENTS

3.1 FACILITY GOALS AND CONCEPTS

The steering committee established the following goals and concepts for architectural design for the JPTA facility:

Goal 1

Provide a facility that is easily accessible to low-income families and English language learners

Concept 1a

Choose a neighborhood centrally located in the city of Las Cruces, near public transportation, and walkable to public amenities

Concept 1b

Choose a culturally neutral neighborhood with a broad representation of demographic strata to be culturally welcoming

Goal 2

Provide a safe, stable, and healthy learning environment for students

Concept 2a

Locate in a fully developed neighborhood to ensure a minimum of disruptive changes to the school environment

Concept 2b

Secure the property perimeter and simplify the entrance to indoor spaces to limit public access during school hours

Concept 2c

Limit visibility into the building to secure classrooms during lockdown

Concept 2d

Provide daylight and views from classrooms out to secure areas of school site

Concept 2e

Ensure that classrooms receive adequate ventilation to promote healthy learning environments

Concept 2f

Eliminate or minimize hazardous crossing from parking to classroom, and from classroom to play areas

Concept 2g

Stimulate learning with a warm, clean, and colorful indoor environment

Goal 3

Create a community asset by accommodating programs for community members

Concept 3a

Provide facilities that enhance communication with the surrounding community

Concept 3b

Create a street presence that will invite community members to use the facility after school hours

Goal 4

Create an environment that will support opportunities for students' academic excellence

Concept 4a

Design classrooms with sufficient space and facilities to accommodate project-based learning

Concept 4b

Provide state-of-the-art technology infrastructure to furnish students and teachers with access to computers and the Internet throughout the facility

Concept 4c

Provide sufficient outdoor space to accommodate activities that support health and learning, such as physical fitness, gardening, farming, and group project implementation

Goal 5

Ensure that building operations are environmentally sustainable

Concept 5a

Install equipment and fixtures that minimize energy and water use inside and outside the facility

Concept 5b

Include recycling and composting practices as part of the instructional program

Concept 5c

Ensure that materials used in renovation construction do not create an unhealthy indoor environment

3.2 SPACE REQUIREMENTS

The space requirements described and quantified in the following section explain the space needs for JPTA when it reaches full enrollment and acquires permanent facilities. ARC determined the space requirements to accommodate the programs offered at JPTA based on the needs of a stand-alone school. If JPTA can colocate with another charter school, some facilities can be shared if safety for young children is accommodated.

3.2.1 Space Summary

Overall Space Summary

The space needs analysis shows the total amount of space required by JPTA to serve a projected enrollment of 198 students in kindergarten through 8th grades with all necessary functions included in the facility. See Exhibit 3-1 below for a summary of the space needs. The total nsf needed is 11,551. The total gsf (assuming 70% efficiency) is 16,501.

Overall Relationship Diagram

The overall relationship diagram (Exhibit 3-2) indicates how the basic site functions, building, access, and outdoor spaces should be organized.

		NASF	GSF	% of Total
1.0	Instructional Program Spaces	7,214	10,304	62.44%
2.0	Instructional Support	2,740	3,910	23.70%
3.0	Administration and Support Areas	1,597	2,287	13.86%
		11.551	16.501	0

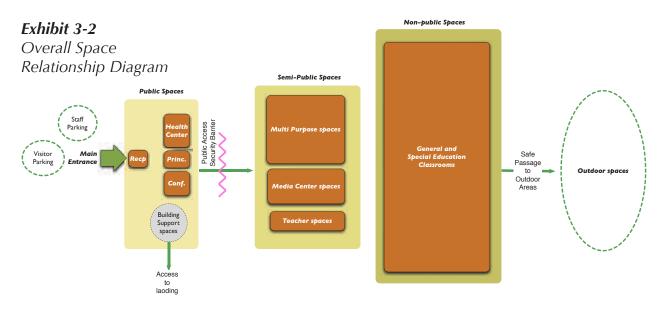

3.2.2 Site requirements

Transportation Accommodation

Students or parents of students are responsible for their transportation to and from school, which includes personal vehicles, parent-organized car pooling, and public transportation. When the school occupies an owned or public facility in the future, pick-up and drop-off functions as well as parking for staff, visitors, and students should be available on site. Ideally, staff parking would be separate from public parking, but it is not necessary.

Exhibit 3-1 Overall Space Requirements for JPTA at Projected

Enrollment

Recreation Facilities

Outdoor physical education, recess, and outdoor instructional programs should take place in outdoor play areas, outdoor classrooms, fields, and gardens. It is desirable to provide separate play equipment areas for primary elementary children, and for intermediate elementary / middle school children. Adjacency to public green space and/or recreational facilities could reduce the site area needed for outdoor programs. Exhibit 3-3 lists site requirements and total site space needs.

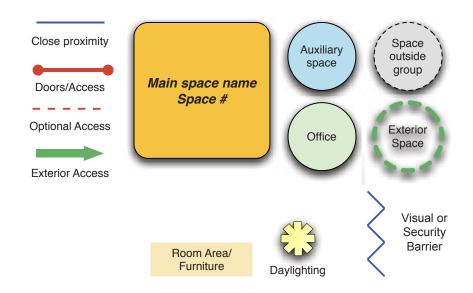

Exhibit 3-3

Site Requirements for JPTA Permanent Facility

Site Requirements		Unit Size	Total GSF	Acres
Permanent Buildings allowing for build-out*	1 2012	16,491	18.491	0.38

Sub-tot	tal school a	rea needed	51,588	1.18

3.2.3 Descriptions and Diagrams of Required Spaces

Following are narrative descriptions and functional diagrams that indicate the needs of each program area. Relationship diagrams illustrate the relationships between spaces, such as adjacency, visibility, and access. Exhibit 3-4 shows the legend of symbols used in the space relationship diagrams.

3.2.3.1 Category 1.0 - Instructional Program Spaces

General classrooms at JPTA will accommodate two kinds of class structures:

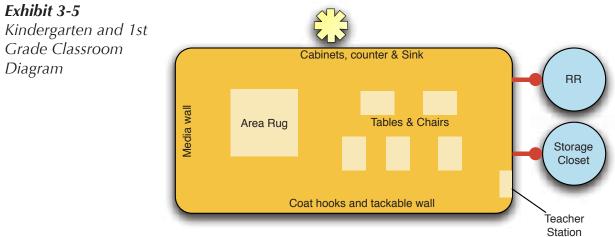

- Home room classes by grade that will engage in the following activities:
 - Breakfast and practicing conversation
 - End-of-the-day wrap-up
- Skill-level classes by competency that will engage in the following activities in small group clusters at tables:
 - Language arts block
 - Mathematics block
 - Project implementation activities

Exhibits 3-5 and 3-6 are relationship diagrams.

Exhibit 3-4

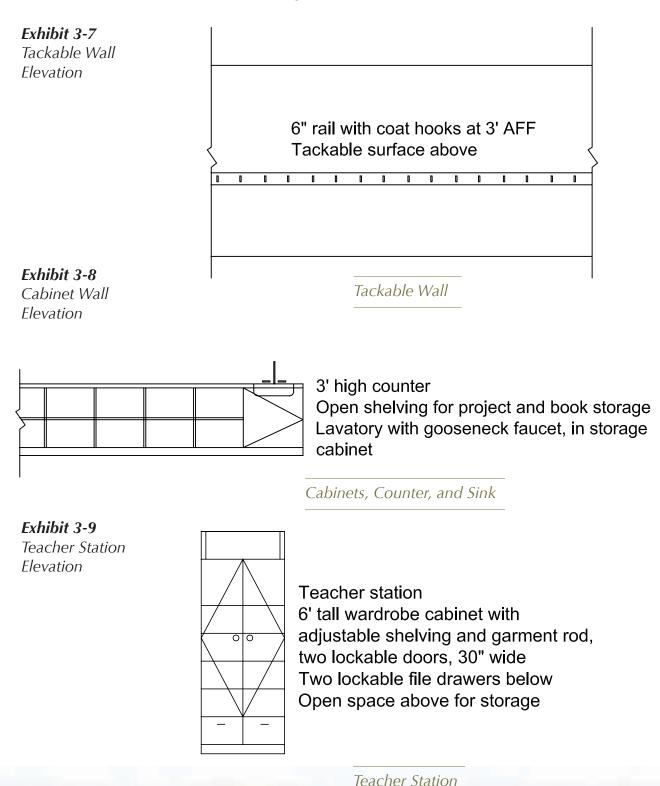

Relationship Diagram

Legend of Symbols

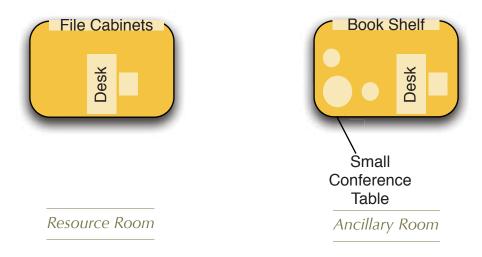

Exhibits 3-7 through 3-9 illustrate the built-in fixtures that are featured in the general classrooms.

Special Education

Special education students are fully integrated in the classrooms, but there are two pull-out spaces for those students who need occasional individual attention in a resource room and ancillary services in a treatment room.

3.2.3.2 Category 2.0 - Instructional Support Spaces

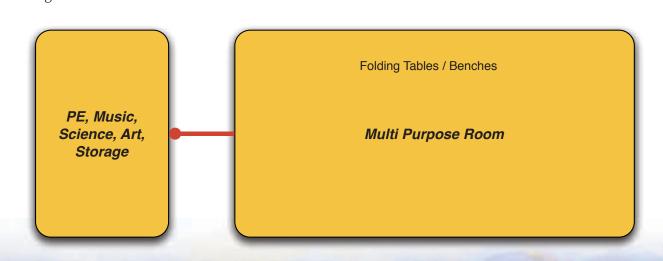

Multipurpose Room

The school uses the multipurpose room for large group gatherings, eating lunch, large group project team work, music instruction and indoor physical education. It will also make the multipurpose room available for after-school community use, such as meetings and instruction.

Exhibit 3-10

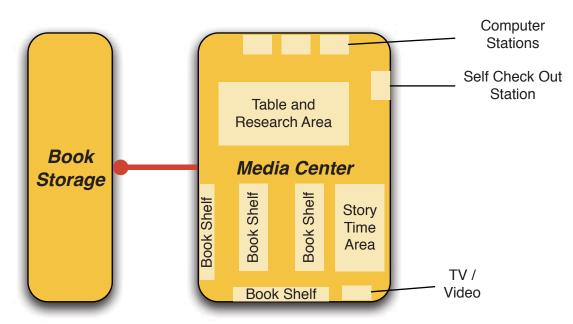

Special Education Spaces Diagrams

Media Center

The media center will support the goal of literacy for English Language Learners as well as provide research sources for projectbased activities. The media center will include a story time area for small groups and computers for online research.

Exhibit 3-12 Media Center Diagram

3.2.3.3 Category 3.0 - Administration Spaces Administration

Administration areas include the following spaces:

- A waiting area for visitors
- A reception area with an administrative assistant's work station
- Shared work stations for part-time staff
- Office for the Head Administrator (principal)
- A conference room
- A work room / lounge
- A student health center

The waiting area for visitors is also the main entry/lobby. The reception area is the first point of contact for visitors. From there, visitors are escorted to their destination. The room includes spaces for the administrative assistant and part-time staff.

The head administrator's office is adjacent to the reception area and has a separate entrance.

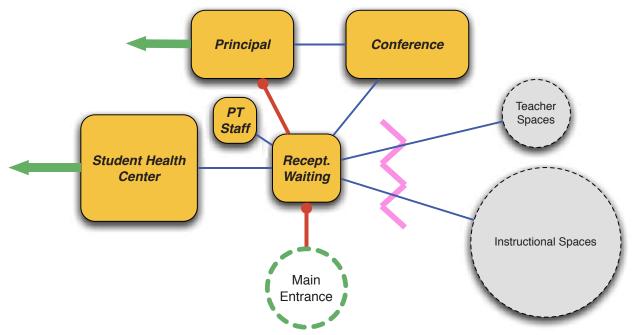

The conference room should be near the main entrance and convenient to the head administrator's office.

Teacher spaces include a workroom and a lounge. These spaces are location-neutral.

The student health center includes space for the nurse to conduct business, store equipment and supplies, and do required testing, as well as a cot area for sick students. The student health center must be adjacent to a restroom or include a dedicated restroom. Convenient access to a building exit is necessary for emergency transportation.

Exhibit 3-13 illustrates the relationships between the administrative spaces.

3.2.3.4 Facility Support

Facility support areas include the following spaces: main facility storage, custodial storage, PE equipment storage, music storage, art and science storage, book storage, and a server room. Storage associated with instructional space will be adjacent to the instructional rooms. Other storage areas and the server room are location-neutral, but should be convenient to a shipping entrance.

3.2.4 Alternative Methods

JPTA intends to provide all spaces necessary for program delivery on campus at the permanent facility. In temporary facilities, the school will need alternate methods to deliver media programs and some programs that would otherwise be delivered within the multipurpose room.

3.2.5 Space Needs

Needs for each type of space are itemized in Exhibits 3-14 and 3-15, which also note comparisons to the New Mexico Public School Adequacy Standards.

Space Needs - Instructional, Administration and Support Spaces

J. Paul Taylor Academy Charter School Facilities Master Plan and Educational Specifications ARC 21022 This page is intentionally blank.

3.2.6 Detailed Space and Room Recommendations for New Construction

3.2.6.1 Technology and Communications Criteria Network

- Network Classrooms
 - 7 CAT 6 hard-wired drops
 - CAT 6 drop or port available for wireless access point (WAP) [IDEAL: 18 inches from the ceiling on the far corner from the doorway with one 110 VAC/power outlet]
 - Wireless network capacity to support 22 computers at 1 Gbps in each room
 - Coaxial wiring to support cable broadcasts
- Network Administration spaces
 - 2 CAT 6 drops and one 110 VAC/power duplex outlets at each worker-occupied desk/workstation
 - Conference room wireless network capacity to support 15 machines at 1 Gbps

Devices

- Computers and network devices classrooms
 - Students 5 workstations per classroom, shared portable laptops, minimum of 1 per student, will be available periodically in classrooms, 1 printer per classroom
- Computers and network devices Teachers and staff
 - One device per teacher/instructional staff
- Peripheral devices
 - Workroom each of shared devices such as printers, copiers, scanners, etc.
- Projection capability classrooms
 - Each classroom will have access to a portable LCD projector
 - Each classroom will be equipped with one A/V screen

Communications -Voice

• Each instructional space, office, and support space will have 1 voice jack with connection for multiple phone lines

Intercom

• Each instructional space will have an intercom connection

3.2.6.2 Power Criteria

Classrooms

- Minimum of 3 duplex outlets on every wall
- Outlet for wall clock
- Center ceiling outlet for future ceiling-mounted devices
- 1 outlet 6' from FF for wall mounted TVs
- Surge suppression

Offices and support spaces

• Meet code for outlet distribution

3.2.6.3 Lighting Criteria Classroom lighting

- Each instructional space requires a light level of at least 50 foot candles, measured at a work surface located in the approximate center of the classroom between clean light fixtures
- All fixtures will have 2-level switching

3.2.6.4 Environmental Conditioning Criteria Classroom temperature

- Each instructional space shall have a heating, ventilation, and air conditioning (HVAC) system capable of maintaining a temperature between 68 and 75 degrees Fahrenheit with full occupancy
- The temperature shall be measured at a work surface in the approximate center of the classroom

Classroom air quality

- Each instructional space shall have an HVAC system that continually moves air and is capable of maintaining a CO₂ level of not more than 1,200 parts per million
- The air quality shall be measured at a work surface in the approximate center of the classroom

3.2.6.5 Classroom Acoustics Criteria

- The sound level in each general and specialty classroom shall be a one-hour, A-weighted noise criteria of less than 55 decibels
- The sound level shall be measured at a work surface in the approximate center of the classroom
- Reverberation times in classrooms shall be within a range of 0.4 - 0.6 seconds

• All other occupied spaces shall maintain a background sound level of less than 55 decibels

3.2.6.6 Plumbing Criteria Classrooms

• Kindergarten and multipurpose classrooms shall have one lavatory with goose-neck faucet, built-in drinking fountain, and hot and cold water

3.2.6.7 Furnishing / Finishes / Fixtures / Equipment Criteria Built-in Furniture

Classrooms

Each general and special education classroom shall have the following:

- Two 12' long magnetic white boards
- One 4' x 4' tack board
- Cabinets as described on page 3-8

Movable Furniture

General Classrooms

- Accommodate up to 22 students with chairs and work surfaces (some work surfaces may accommodate more than one student)
- Primary elementary classrooms shall have one kidney table or round table, and one conference table. Intermediate elementary and middle school classrooms shall have student desks and one conference table. All classrooms should have one 4-drawer file cabinet.

Special Education

- Resource room shall be equipped similarly to general classrooms (with appropriate number of desks for class size)
- Ancillary service rooms shall have one work surface, one small conference table, file cabinets, and bookshelves

Offices

Each office shall have the following modular office furniture:

- Desk and credenza work surfaces
- Drawer stack, four file drawers, overhead storage

Media Center

To be determined

Multipurpose Room

To be determined

3.3 IMPLEMENTATION OF SPACE NEEDS

3.3.1 Scenarios for Implementation

JPTA has three options for occupying future facilities within the current master plan's time frame (current school year through 2015/16 school year):

- 1. Remain at the current location with a main facility and portable classrooms, or with an additional permanent facility added to the existing main facility
- 2. Seek an adequate facility to lease from a public entity
- 3. Seek an adequate facility to lease/purchase from a private entity

JPTA will remain at its temporary facilities and grow enrollment through 8th grade. During this time, it can research options for a permanent facility and, if desirable, find a permanent facility that:

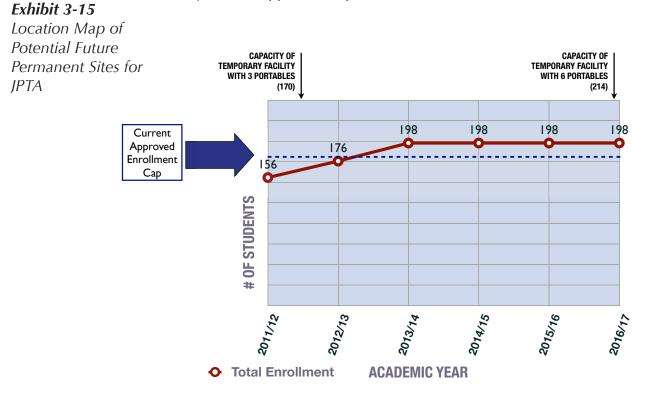

- Satisfies the program needs described in the EdSpec portion of this document
- Meets the goals outlined by the steering committee
- Complies with House Bill 283 regarding ownership of facilities occupied by state-chartered charter schools.

House Bill 283 states that in order for the school to renew its charter (scheduled for academic year 2016/17), it must either be:

- 1. Housed in a publicly-owned building that is owned by any of the following:
 - the school
 - the school district
 - the state, institution or political subdivision of the state
 - the federal government or one of its agencies
 - a tribal government
- 2. Subject to a lease-purchase arrangement
- 3. Housed in a leased facility, because public buildings are not available or adequate, that either:
 - is privately owned, meets statewide adequacy standards, and is contractually obligated to maintain those standards at no additional cost
 - is owned by a nonprofit entity organized to provide a facility for the school

3.3.1.1 Remain at Current Facility

JPTA's current temporary facility can accommodate current enrollment and can be modified by installing additional portable classrooms to accommodate projected enrollment increases beyond the approved cap, as shown in the chart in Exhibit 3-16.

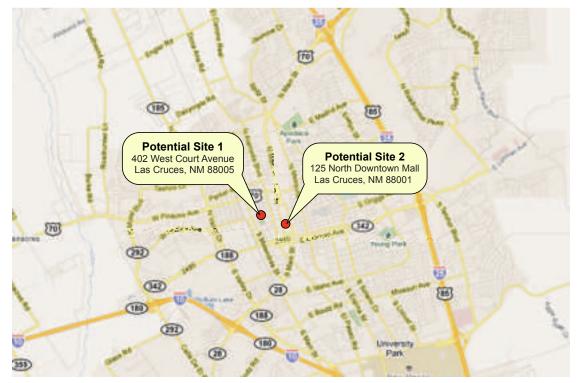

However, the facility does not meet all of the facility goals established by the steering committee and may not comply with HB283. Therefore, JPTA is researching potential permanent quarters and hopes to secure, renovate and occupy a new facility before the end of the initial charter period.

3.3.1.2 Seek Alternative Permanent Facility

JPTA board members are currently pursuing two potential permanent sites, described below. Exhibit 3-17 maps the locations of potential permanent sites.

Exhibit 3-16

Location Map of Potential Future Permanent Sites for JPTA

Potential Site 1 - Court Youth Complex

During the planning process for this document, the school founders negotiated the use of a vacant building at the Court Youth Complex, located at 402 Court Avenue, Las Cruces, NM 88005, a site that houses programs run by the nonprofit organization Court Youth Center. The campus is home to several programs: the Court Youth Center, which provides programs in the arts to the community; Alma d'Arte charter school; and Crossroads alternative school which is a program of the Las Cruces Public Schools. Partnerships with Court Youth Center programs and use of the facilities is a desirable match for JPTA. However, LCPS owns the property and would be necessary to transfer the property to the city of Las Cruces in partnership with the Court Youth Center before renovating it to accommodate JPTA's space needs. JPTA would then lease the facility.

The campus is bounded to the south by Court Avenue, to the west by Raymond Street, to the east by Armijo Street, and to the north by Mountain Avenue. It is located within a state registered historic district. The site includes several buildings constructed at various times beginning in 1941 with the main building, which was originally the Court Junior High School. A building constructed later (probably in the 1960s), the Educational Services Center (ESC), is available to JPTA. The main building is considered to be "contributing" to the historic district, although the ESC building is not. The courtyard between the ESC building and the historic building would contain play equipment for all grades and the shared playing fields north of the buildings, which is approximately 1.02 acres, would accommodate outdoor activities. A small parking lot north of the ESC building, approximately 4,000 sf, can accommodate visitor parking. See Exhibit 3-18 for an aerial view of the site.

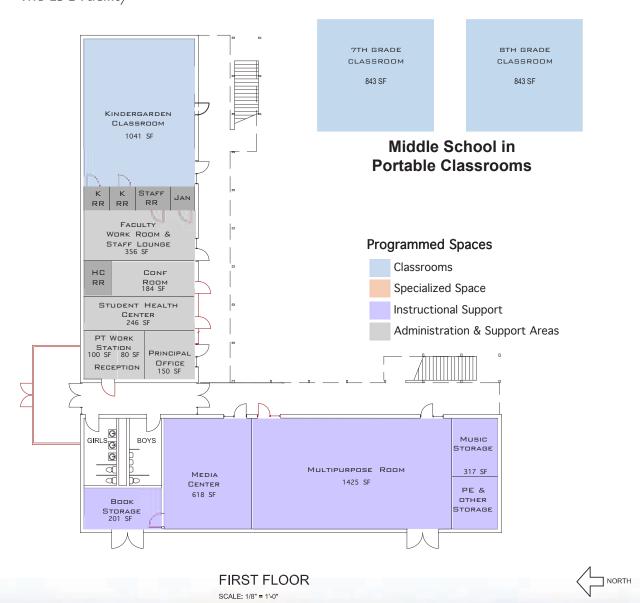

J. Paul Taylor Academy Charter School Facilities Master Plan and Educational Specifications ARC 21022 **3-21** October 2011

Exhibit 3-17 Aerial Site Plan of The Court Youth Center Campus

Court Youth Complex Facility

The facility at the Court Youth Complex that is available to JPTA is a two-story brick building that most recently served as administrative space by LCPS. It is the only facility at the campus that JPTA will be allowed to occupy, although space for placing portables is potentially available to accommodate space needs that do not fit within the proposed facility.

Exhibits 3-19 and 3-20 show the proposed adaptation of the facility to meet the space needs outlined in the program of requirements.

3-23 October 2011

Potential Site 2 - 125 Downtown Mall

JPTA has recently worked with a realtor to find available vacant facilities for sale of an adequate size in the target area defined by the facility goals. Potential Site 2 is available for renovation and lease-purchase at 125 North Downtown Mall. Negotiations have not yet been conducted with the property owner, but it appears that the facility could be adapted to JPTA's space needs. The facility faces North Downtown Mall, a pedestrian walkway, and is surrounded to the east and west by commercial properties. See Exhibit 3-21 for an aerial view of the facility.

J. Paul Taylor Academy Charter School Facilities Master Plan and Educational Specifications ARC 21022

Exhibit 3-20

Aerial Site Plan of the

Property at 125 North

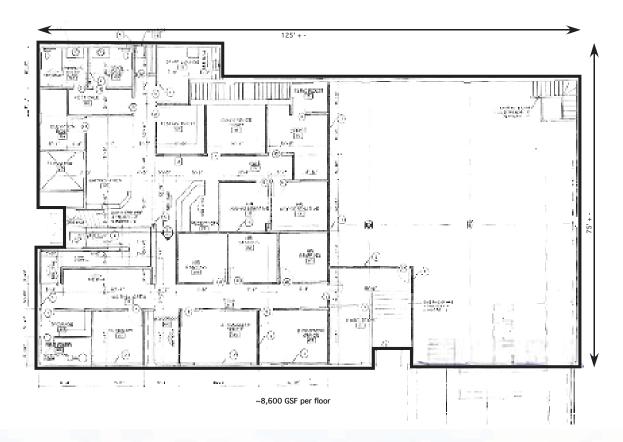

Downtown Mall

3-24 October 2011

125 North Downtown Mall Facility

The property at 125 North Downtown Mall is a vacant two-story masonry structure, most recently occupied by a call center. The existing interior walls are non-load bearing and the space can be adapted to accommodate the school's program requirements. There are approximately 8,600 gsf per floor, a total of about 17,200 gsf in the facility, which exceeds the total programmed space needs. Maneuvering the varying floor heights for handicapped access will increase tare square footage, but the post and beam construction allows for ample flexibility of the floor area. Exhibit 3-22 illustrates the first floor plan of the property in existing condition.

Exhibit 3-21 Lower Floor Plan of 125 North Downtown Mall

This page is intentionally blank.

CAPITAL IMPROVEMENT PLAN

4.1 CAPITAL FUNDING

4.1.1 Historic and Current Funding

In its first year of operation, 2011-12, JPTA will receive facility funding from only one source, lease reimbursement funds from PSCOC at approximately \$700 per MEM per year.

4.1.2 Current Capital Expenses

JPTA has entered a lease agreement for a one-year period with a guaranteed one-year extension and a promise to install additional portables to accommodate enrollment growth. The property owner is willing to continue this arrangement until the school is able to acquire a permanent facility. Lease payments are covered exclusively through facility funds.

4.1.3 Potential Future Sources of Revenue

JPTA may access the following sources of funding for facilities capital projects:

- Future annual lease payment from PSCOC
 - For planning purposes, the funding amount expected from the PSCOC will continue annually at roughly \$700 per MEM. When enrollment increases to the projected level of 198, the lease reimbursement payments will increase to a total of approximately \$138,600 annually. Exhibit 4-1 shows how this funding stream will increase as the enrollment grows.
- The voters of Las Cruces have currently elected to tax themselves in accordance with HB33 and SB9. JPTA is not eligible for a portion of that funding until the next election. If those future elections pass (SB9 in 2014, HB33 in 2015), a portion of mill levies from those source will be available to JPTA.
- If the school is able to negotiate an agreement with the Las Cruces Public Schools, it could potentially receive funding from the general obligation bond which is scheduled for an election in 2014, but this master plan does not anticipate the potential for funds from this source.

- PSCOC capital outlay, a competitive process (see Section 4.14 below)
- Legislative appropriation
- Federal grants

Exhibit 4-1

Facility Funding

Available from Current and Anticipated Funds • Private fundraising (gifts and grants)

Exhibit 4-1 illustrates the expected cash flow based on projected enrollment growth until the school reaches the planned enrollment level of 198 students (which exceeds the current approved cap).

AY	Students	PSCOC Lease Cash Flow	From LCPS Mil Levy	Total Anticipated Cash Flow
2011-12	156	\$ 109,200		\$ 109,200
2012-13	176	\$ 123,200		\$ 123,200
2013-14	198	\$ 138,600		\$ 138,600
2014-15	198	\$ 138,600	\$ 44,411	\$ 183,011
2015-16	198	\$ 138,600	\$ 112,533	\$ 251,133
2016-17	198	\$ 138,600	\$ 113,814	\$ 252,414
2017-18	198	\$ 138,600	\$ 115,660	\$ 254,260
2018-19	198	\$ 138,600	\$ 117,432	\$ 256,032
2019-20	198	\$ 138,600	\$ 119,153	\$ 257,753
2020-21	198	\$ 138,600	\$ 121,536	\$ 260,136

Lease allowance / MEM \$ 700.00

Annual cash flow available to pay rent ²

4.1.4 PSCOC Capital Outlay Funding

The New Mexico legislature provides capital funding for public schools, through either direct allocation or capital outlay from the PSCOC, for renewal or new construction projects. Each school facility in the state is ranked with respect to all other facilities in the state, and assigned a condition index value which describes physical and programmatic deficiencies. The New Mexico condition index (NMCI) value is a composite derived from the cost to repair deficiencies compared to the replacement cost of the facilities.

Charter schools are eligible for funding after operating successfully for six consecutive years (first year for planning in

advance of opening, second through fifth years for operations, and sixth year for charter renewal process). J. Paul Taylor Academy will be eligible when it has undergone the charter renewal process (AY 2014-15) and occupies a permanent facility.

Funding from the PSCOC follows a matching formula that varies by district. State-chartered schools follow the formula of the district where they are located. JPTA would follow the Las Cruces matching formula (currently, the state share equals 65%, requiring a 35% local match).

PSCOC satisfies facility funding needs statewide by meeting the greatest needs first. The PSCOC generally funds award applications for projects in the top 100 on the ranked list of public school facilities needs in each funding cycle.

PSCOC funding is primarily for correcting deficiencies in a facility, based on a statute that outlines the prioritization criteria for deficiencies correction (6.27.41 of NMAC).¹ The temporary JPTA facility is not currently listed on the NMCI.

[&]quot;Deficiencies" means conditions in public school buildings and grounds that may adversely affect the health or safety of students and school personnel, including:(1) health and safety/building code compliance such as fire code compliance, fire resistance and fire control capability, emergency lighting, and compliance with the Americans with Disabilities Act; (2) building structural stability such as foundation/ structure, exterior walls, roof, exterior, windows/doors, interior floors, walls and ceilings, and fixed equipment; (3) mechanical/electrical systems defects such as plumbing, HVAC-combination heat/cool, insulation, and electrical/lighting.

4.2 CAPITAL NEEDS AND CAPITALIZATION ANALYSIS

Since JPTA currently occupies a temporary leased facility with no definite plan for future facilities, eventual capital needs are unknown. Anticipated financial resources can realistically fund the three options identified for meeting future facility needs.

4.2.1 Capitalization Options for Permanent Facilities

When JPTA nears the end of the initial charter period, in 2016/17, it will realize a total annual cash flow from all anticipated sources, as described in 4.1.3 Potential Future Sources of Revenue, of approximately \$260,000. These funds can satisfy a lease or capitalize a lease-purchase.

The amount of cash flow available to satisfy a lease in a permanent facility of a size adequate to accommodate programs and delivery methods, as identified in Section 3.2 Space Requirements (approximately 11,500 sf), would support a rent of approximately \$22/square foot.

The alternative to leasing a facility that complies with HB 283 is for the school to own a facility, either by purchasing land and building new or by purchasing an existing structure and renovating to suit program needs. The capitalization analysis to lease-purchase a facility is based on the following assumptions about potential financing terms:

- 20-year payback term
- 6.5% interest

The capitalization potential of cash flow from these sources allows for a present value investment (new construction or purchase and renovation of existing structure) of \$2.84 million.

Purchase of land and construction of an adequately sized facility using 2011 construction data would greatly exceed that figure, making this option impractical without additional gap funding. See Exhibit 4-2 for the cost breakdown of new construction option.

Due to construction cost volatility in past years, projected costs noted in this master plan are based on 2010 dollars and are not escalated.

Exhibit 4-2 Programmatic Estimate of Probable Cost of New Construction

PROGRAMMATIC ESTIMATE OF PROBABLE COST OF CONSTRUCTION

A. Estimated Construction Cost 1. New	\$180.00 /SF X	16,491	\$3,000,000
B. Fixed Equipment (included in A)			\$0
C. Site Development Cost	5.00% of A		\$150,000
D. TOTAL CONSTRUCTION COST (MACC) (A+B+C)	Cost / SF=	\$191.01	\$3,150,000
E. Site Acquisition Cost	51,588 sf		\$671,000
F. Integral Moveable Equipment	8.00% of D		S252,000
G. Professional Fees	6.50% of D		S205,000
H. Administration	2.50% of D		\$79,000
I. Contingency	5.00% of D		\$158,000
NMGRT	6.6875% of D,F,G,H, I		\$257,068
J. TOTAL PROJECT COST (SUM OF D to J)		\$289.25	\$4.77 Million
Capitalization capability= \$2.8 million	Funding gap	of \$1.83	million

If JPTA can identify an existing property for lease-purchase, \$2.84 million can fund a purchase and renovation cost of approximately \$172 per square foot based on the gross square footage total identified as space needs.

- \$1.3 million for renovation ((\$80/sf)
- \$1.5 million purchase price (~\$91/sf)

4.3 IMPLEMENTATION STRATEGY

Project Prioritization 4.3.1

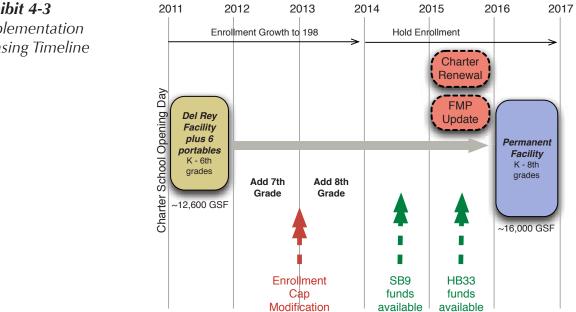

Immediate needs

The priority project for the school is to ensure that the current facility can accommodate enrollment growth while the administration researches and secures a permanent facility solution. Cash flow analysis indicates that there will be sufficient funding to satisfy an extended lease with the current landlord.

Short term needs

JPTA will take the necessary steps to secure a leased or leasepurchased facility before the end of the current charter period and comply with HB283 regarding charter school facility occupancy. Potential cash flow analysis indicates that there will be sufficient funds to lease a facility that meets all requirements, and most funds will be sufficient to lease-purchase and renovate an acquired facility.

Exhibit 4-3 shows the time line for future facility activities and accommodations.

Exhibit 4-4 illustrates a potential capital improvement plan based on the prioritized options described. Since many of the factors that will affect the realization of this plan are unknown at this time, this plan should be considered preliminary and should be updated annually as factors change and more reliable information is available.

Exhibit 4-4 Capital Plan

2	Academic Year	Academic Year Capital Project Sour		Available	
	2011-12			\$ 109,200	
Immediate needs	2012-13			\$ 123,200

Facility Detail

This section provides details about the facility condition and other supporting documents, and includes the following information:

- Sites and facilities data table
- Photographs of the school's temporary facility
- Facility space inventory
- Floor plan
- Facility evaluation
- FAD update

5.1 SITES AND FACILITIES DATA TABLE

- Name of facility leased property, J. Paul Taylor Academy Charter School
- State identification number none
- Physical address 3900 Del Rey Boulevard, Las Cruces, NM 88012
- Date of opening July 2011
- Dates of additions of portables summer 2011, fall 2011
- Facility Condition Index (FCI) and N.M. Facility Condition Index (NMCI) – NA
- Site owned or leased leased
- Total building area gross sq/ft ~12,600
- Site size ~2.5 acres
- Total number of permanent general classrooms 5
- Total number of permanent specialty classrooms 1
- Total number of portable classrooms 3 plus 3 in the future
- Total number of classrooms 9, 12 total in the future
- Percentage of portable classrooms compared to total number of permanent classrooms 33%, 50% in the future
- Total enrollment current year (40th day count) 156
- Number of gross sq. ft. per student per school facility current 63.5, future 80.8

MEMORANDUM

10:	Mr. Douglas R. Brown, J. Paul Taylor Academy
Through:	Martica Casias, PSFA Pleaning & Design Manager
CC1	Som Obenshalu, PED Charter School Division
From:	Richard A. Romero, Fucilities Specialist
Date:	June 8, 2011
RUS:	Potential Charter School Facility Assessment: 3900 Itel hey Bonievard, Las Cruses, New Mexico

At your request, Mertica Casias and I visited the referenced address on June 2, 2011. The purpose of my visit was to conduct an adequacy analysis, facility condition assessment and charge of occupancy analysis of a projected facility to becau J. Paul Teylor Charter School (JPT).

The following assessment is based on a visual inspection of the premises and no testing of any kind was conducted and no invasive or destructive inspect on methods were employed.

BACKGROUND

The JPT is a state-chartered school that proposes to begin operation for the 2011-12 school year. JPT will serve 140 students in Madergarnen through the 6th grade. By the third year of provide a grade school the anel ment to 180 kindergarnen through 8th grade students. The JPT proposes to provide a gravity as real service mean with instruction based on project based learning and dual language instruction, since it is anticipated to struggly of its students will be English language learners.

FACILITY DESCRIPTION

The facility was constructed in 2008 and regimally housed a day care facility. As such the Facility is currently classified as an 'F' occupancy set a charge to a 'F' occupancy will be accessary. This change of occupancy should not prove to be a challenge since, is greated, huilding code requirements not possible to mergency that an 'F' occupancy give ally serves or regulation where shillity to respond to an emergency is limited due to age, infirmity or because the becau

This single store building opposes to consist of a special facting foundation and store well system with concrete slab-engrade floors. We foundation and floor slab appears to be in good condition and does not exhibit evidence of differential sottlement or other problems. Exterior fearing walls are most likely of metal frame construction. The facility exterior is finished with street thet is in good combiner.

The reef covering appearess to Thermophastic Clofin (TPO) over most of the facility, with descentive elsy tile covering the slaped areas of the tool covering the three building entrances. Both the TFO and ills perions of the reef are in good condition.

The building is loated and avoid by several combination motiop units that are in good condition. Temperature is controlled by thermostats which are present in most of the norms in the facility.

Partnering with New Identico's communities to provide quality, natainable school facilities for our students and educators

J. Paul Taylor Academy Charter School Facilities Master Plan and Educational Specifications ARC 21022 The exterior doors are metal in metal frames and are in good condition.

The exterior windows in this facility are double pane windows and are in good condition.

The interior floors are finished with vinyl composite tile (VCT) throughout. Floor finishes are in good condition.

The interior walls are assumed to be of metal frame construction and are finished with drywall and paint. The wall finishes are in good condition.

The ceiling consists of a suspended grid and acoustical tiles and fluorescent light fixtures. The ceiling grid, tiles and lighting are all in good condition.

The facility will be augmented with three single-classroom portable buildings that will be provided to JPT by the Las Cruces Public School District. All three portable classroom buildings are reported to have been built in 1985.

ADEOUACY ANALYSIS

The Public School Capital Outlay Council has waived many of the requirements of the Statewide Adequacy Standards for charter schools in recognition of the fact that charter schools, by there very nature, deliver education in a non-traditional manner. As such, this analysis is based only on those areas of the Standards that have not been waived.

GENERAL REQUIREMENTS

Based on visual inspection, only, the building appears to be structurally sound.

The exterior envelope appears to be weather-tight.

Because this facility was recently constructed, it is highly unlikely that lead, asbestos or other harmful materials are present.

The electrical and plumbing systems appear to be functioning normally, as did the fire detection and HVAC systems. The fire suppression system is a well system. The suppression system was not tested, but, given that this facility was recently constructed, it is assumed to be in good condition.

A two-way communication system is a feature of this building

SITE

There is the ability to provide a student drop-off and pedestrian pathway on site.

Site drainage appears to be adequate to protect the structural integrity of the building.

No evidence of past flooding, ponding or erosion on the site was observed.

ACADEMIC CLASSROOMS

The following student indicates the minimum net square footage per student required for an adequate general classroom.

GRADE LEVEL	REQUIRED NET SQUARE FT/STUDENT
Kindergarten	50
1 st Grade – 5 th Grade	32
6 th Grade - 8 th Grade	28
9 th Grade – 12 th Grade	25

GRADE	NET SF Required Design Capacity 140	NET SF Required – Design Capacity 180	NET SF Provided	Adequate
Kindergarten	1,000	1,000		
1"	640	640		
2"	640	640		
3rd	640	640	1 All	
4th	640	640	. Also	
5%	640	640	AT STALL	
6%	560	560 🚽	7 VDA	
7 th		560	600 B	
8 th		560	1 10	h
9 th				
10 ^m	8			
11**				
12 th				
TOTAL	4,760	5,880	9	

This next table provides the required general classroom square footage per grade required for your school, based on 20 students per grade level.

Lighting must be provided at 50 foot-candles of well-distributed lighting. This is to be measured at a work surface at the center point of the classroom between clean light fixtures. The facility lighting was not tested, but appeared adequate. Although not tested, lighting appears adequate.

Classroom temperatures must fall between 68 and 75 degrees Fabreabeit at fall occupancy. The temperature shall be measured at the approximate center of the classroom. It is assumed that, due to the relative newness of the facility, the HVAC system is capable of functioning as required. As previously mentioned, each room has an individual thermostat, which should ensure that all occupants will be comfortable.

Classroom acoustics shall not exceed a one-hour A-weighted level of 55 decibels measured at a work surface at the approximate center of the classroom. Given that the facility was completely empty at the time of the visit, no assumption can be made with regard to this item.

The HVAC system must provide continual air movement and shall maintain a CO₂ level of not more than 1,200 parts per million. This was not tested, but my observation was that nir quality was adequate.

CHANGE OF OCCUPANCY ANALYSIS

Because this facility was most recently used as a daycare facility and was classified as an '1' institutional occupancy in accordance with the current building codes, a change of occupancy to an 'E' educational occupancy will be required. While every effort has been made to provide you with a detailed analysis of the requirements to affect this change, you are strongly advised to contact the City of Las Cruces Community Development Department (CDD) as soon as possible. This is the authority having jurisdiction over the change of occupancy and they may have additional requirements beyond the minimum building code requirements.

The following information is based on the 2006 International Existing Building Code (IEBC)

General Requirement

Please provide a copy of the required certificate of occupancy to PSFA once the change of occupancy has been approved and the new certificate issued by the City of Albuquerque Building Safety Division.

Electrical

The change of occupancy will require that any unsafe conditions, as determined by the CDD, be remedied. However this requirement does not entail complete upgrade of the system. Given the relative newness of the facility, no such repairs are anticipated.

The electrical service may be required to be upgraded to comply with current electrical code requirements for the new occupancy, as determined by the CDD. This scenario is unlikely in this case, but is dependent on the CDD's analysis and requirements. Given the relative newness of the facility, no such repairs are anticipated.

The number of electrical outlets may be required to be increased, if required for the new occupancy. This scenario is unlikely in this case, but is dependent on the CDD's analysis and requirements.

Mechanical

If the new occupancy is subject to increased mechanical ventilation requirements in accordance with the currently adopted mechanical codes for the new occupancy, these increased requirements must be met, as determined by the CDD. The same is true of kitchen exhaust requirements. This is not anticipated for this facility.

Plumbing

There are currently six female water closets and six male water closets/urinals in this facility. It is not possible to perform an accurate plumbing fixture analysis until all spaces are assigned specific uses. However, the number of fixtures present can accummodate 300 females and 300 males. This is more than sufficient to accommodate 180 students as well as staff and visitors.

A detailed analysis can be performed once the uses of the individual spaces in this facility are determined.

Change of Occupancy Classification.

This is a change of occupancy classification without a separation. The subject facility will be required to comply with Chapter 8 of the International Existing Building Code as well all applicable provisions of Chapter 9.

This building is fully sprinkled. No additional fire protection requirements are applicable.

Any new interior finishes that are installed in the facility must comply with Table 803.5 of the International Building Code (IBC). No renovations are anticipated as part of this change of occupancy.

Since this facility is undergoing a change from an I to an E occupancy, a higher Means of Egress Hazard Category to a lower (less hazardous) Means of Egress Hazard Category, no required changes to the exiting system are anticipated based on applicable provisions of the IEBC. Because you have not assigned specific uses to the spaces in the facility, a final occupant load cannot be calculated and specific egress requirements determined. PSFA will review these items and make a final determination as to compliance when you planned uses for the individual spaces in the facility are finalized.

The facility complies with allowable heights and areas for an E occupancy for Type V-A construction in accordance with the IBC. In addition, the building is eligible for allowable area increases due to frontage fire sprinkling.

No change to the fire rating and opening protective requirements of the IBC is necessary for this facility because there is no increase in the Exposure of Exterior Walls Hazard Category in Table 912.6 of the IEBC.

The facility is handicapped accessible, with the exception of signage, which must comply with Section 1110 of the IBC.

CONCERNS

The primary concern with regard to this facility is that a change of occupancy is required prior to JPT occupying the building. I have telephoned the City of Las Cruces Community Development Department to inquire about the requirements, but have not yet received a return call. I will relay any information that I receive to JPT, immediately. JPT should also communicate with the CDD regarding their requirements for the change of occupancy.

WEIGHTED NEW MEXICO CONDITION INDEX (WNMCD)

The current average wNMCI for all Public Schools, including charter schools, in New Mexico is: 29.84%

The wNMCI for your school facility is: XX.XX%.

Your school facility condition is/is not better than the average condition of school facilities in New Mexico.

CONCLUSION

In general, the condition of the facility is good and is adequate to meet the needs of TGA. If attention is paid to the areas of concern noted above, the facility should serve CIS well for the foreserable future.

Executive Summary Report
State Chartered J. Paul Taylor Academy School ID: 500JPT District: Schools School ID: School ID: 500JPT
Facility Description
J Paul Taylor Academy Charter School is currently located at 3900 Del Rey Boulevard in Las Cruces, New Mexico. The school is chartered through the State of New Mexico. The one story campus contains permanent buildings and portables. Occupancy is currently K thru 6th grade. Originally constructed in 2008 as a day care center the building has been well maintained.
Site: The usable portion of the site is approximately 2.6 acres. There are 20 parking spaces (2 are handicap spaces). Concrete sidewalks are in good condition. There is landscaping in the parking lot and minimal landscaping on site.
Structural/Exterior Closure: The building appears to consist of a spread footing foundation and stem wall system with concrete slab on grade floors, which are in good condition and do not exhibit evidence of differential settlement or other problems. Exterior bearing walls are most likely of metal frame construction. The facility exterior is finished with stucco and is in good condition. the roof covering appears to be TPO (thermoplastic olefin) over most of the facility with decorative clay tile covering the sloped areas of the roof at the facility entrances. All roofing is in good condition.
Heating/Cooling: The building is heated and cooled by several combination rooftop units that are in good condition. Temperature is controlled by thermostats which are present in most of the rooms in the facility.
Building shell and interior finishes: The exterior doors are metal in metal frames and are in good condition. The exterior windows in this facility are double pane windows and are in good condition. The interior floors are finished with vinyl composite tile (VCT) throughout. Floor finishes are in good condition. The interior walls are assumed to be of metal frame construction and are finished with drywall and paint. The wall finishes are in good condition. The accurate and floors are finished with drywall and paint. The wall finishes are in good condition. The celling construction and are finished with drywall and paint. The wall finishes are in good condition.
Electrical and special systems: The electrical and plumbing systems appear to be functioning normally, as did the fire detection and HVAC systems. The fire suppression system is a wet system. The suppression system was not tested but given that this facility was recently constructed it is assumed to be in good condition. A two way communication system is a feature of this building.
