INTRODUCTION

The intent of the Facilities Master Plan is to identify existing facility conditions, past and future enrollment, review of the district's educational program, the identification of new or replacement facilities to meet the needs of the district.

This Facilities Master Plan is designed to be a flexible planning tool to identify facility issues and programmatic needs to the community, parents, staff and the Las Vegas City Schools Board of Education and offer periodic input and revision as conditions change and new needs are identified within the district. The plan identifies capital needs and allocates resources to address the following facility issues:

- Life/health/safety
- Educational and programmatic needs and curriculum needs
- Enrollment Trends (decline/ growth)
- Promotes efficient use of educational space
- Facility Renewal Needs (renovations/ refurbishment)
- Educational Technology
- Energy Management

The Facilities Master Plan is comprised of five main sections:

- Section 1 Goals / Process provides information about the charter school's goals and the planning process.
- Section 2 Existing and Projected Conditions provides information about facilities used by the school, enrollment, technology, and capital resources.
- Section 3 Capital Improvement Plan provides information about capital needs, project priorities, and implementation strategies.
- Section 4 Master Plan Supporting Material contains detailed information about school facilities, evaluations, plans, and other pertinent information as required.
- Section 5 Appendix contains LVCS Preventative Maintenance Plan and Structural Engineering Report for multiple district facilities.

THIS PAGE IS INTENTIONALLY BLANK

1.0 GOALS / PROCESS

1.1 Goals

The City of Las Vegas is both the largest community within San Miguel County as well is home to the county seat. Originally settled by Luis María C. de Baca and his family in 1821, Nuestra Senora de los Dolores de Las Vegas Grandes (our Lady of Sorrows of the Great Meadows) was the last Spanish land grant in North America awarded in 1835. Las Vegas has a very rich and colorful history, located along the Santa Fe Trail the community quickly grew from a small agricultural based settlement to a thriving city. With the coming of the Atchison, Topeka, and Santa Fe Railroad in 1879, a new community was established on the east side of the Gallinas River and quickly grew, creating "two" Las Vegas cities - east Las Vegas and west Las Vegas that were separated by the river. While over time the "two" cities merged to become "one" City of Las Vegas, the two long ago established school district's remain in existence today - West Las Vegas Schools and Las Vegas City Schools, and both district's combined serve the educational needs of over 3,000 students per year.

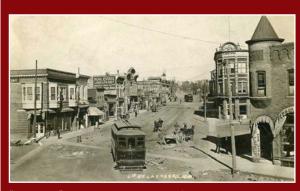

Las Vegas City Schools (LVCS) has been serving the educational needs of the students residing within its district and the larger community well over 100+ years. The District is committed to the educational quality of all students. As such, LVCS is focused on providing quality 21st century education opportunities for all students attending its schools by providing healthy, safe and academically equitable learning environments in all district facilities. The new 2017-2022 District-wide Facility Master Plan identifies current and future Capital Improvement Needs that need to be addressed over the next five to seven years to be able to continue to provide adequate educational facilities that meet state standards and serves the district's students, teachers and staff.

District Mission Statement

"The Mission of the Las Vegas City School District, in partnership with parents and community, is to provide a safe, nurturing and challenging environment in which all students develop a sound academic and moral foundation, demonstrate commitment to learning and become responsible citizens capable of participating in an ever changing global society."

Historic Plaza - Source: mainstlvnm.com

"New Town" Las Vegas - Source: mainstlvnm.com

Old Castaneda Hotel - Source: mainstlvnm.com

Las Vegas City Schools - Former San Miguel Courthouse and Post Office, 1927

Las Vegas City Schools recognizes its shared responsibility with the surrounding community for the effective and efficient use of its resources to educate students. LVCS believes that all students are unique individuals with special needs and abilities; and as such must work towards providing a safe, inviting, and quality 21st century learning environment for all district students and staff.

In order to conduct a good self-study and to address the content and curriculum issues which will directly impact students, the district must develop an educational system that can listen to, and listen from, its various constituencies within the community. The purpose of this is to provide training, support and networking to achieve systematic changes needed for that listening and learning to occur. Only through collaborative effort will LVCS improve the way children can learn and be educated

Facility Master Plan Goals

The District's Five Year Facility Master Plan was developed from information gathered during site visits as well as information from the LVCS Superintendent, Board Members, Facility Manager, administrators, teachers and community members from the various committee meetings. The intent of the Facility Master Plan is to create a forward thinking documented approach for the district's facilities, so that when fully implemented, provides the school district with facilities over the next ten to twenty years that meet the needs of both teachers/staff and students as well as:

- Extends the life of existing facilities and building systems
- Increases opportunities to implement future educational programs with flexible spaces
- Improve facility utilization through grade realignment
- Improves the 'Learning Environment' through building modernization/ renovation
- Improves safety and security of ALL of the district's facilities
- Provides for both current and future technology needs
- Leverages opportunities for PSCOC funding for priority projects when available
- Identifies other funding options to meet facility capital improvement needs
- Instills pride in the community

1.2 PROCESS

To generate input into the Five Year Facilities Master Plan, numerous meetings were held by the Facilities Master Plan Committee, whose membership was composed of community representatives, parents, staff and administration. The Facilities Master Plan Committee was presented information concerning: enrollment projections which included birth, migrations, housing, program requirements, historical enrollments; educational facility assessments which included quantitative / qualitative analysis, capacity studies, profiles, priorities; and community and school profiles which included demographics, educational program, academic achievements, financial information.

The Facilities Master Plan Committee reviewed the information, developed goals for the school district, established facility priorities and reviewed their findings and recommendations with the Board of Education for final approval.

Authority and How Decisions Are Made

The Superintendent and Board of Education appointed members of an advisory committee to consider and recommend capital needs. The Facilities Advisory provided guidance to the administration and Board of Education on capital improvement priorities. The Las Vegas City Schools Board of Education makes all final decisions in regards to the Facilities Master Plan.

Facility Assessments -April 10-11, 2016

Facility Assessments were conducted by Visions In Planning, Inc. for each facility owned and operated by the Las Vegas City Schools. The assessments included:

- Site visits
- Meeting with Superintendent
- Facility walk-through to document existing conditions
- Meetings with Facility Manager for District
- Review of NMPSFA Facilities Assessment Database
- Review of NMPSFA Facilities Maintenance Assessment Report
- Capacity and Utilization Study for each facility

Facilities Advisory Group Meetings:

Once the facility assessments were completed and the data gathered, meetings with the Facility Master Plan Committee were begun. The first committee meeting was used to explain the purpose of a facilities master plan and identify the tasks and responsibilities of the Facility Master Plan Committee. Several subsequent meetings were held where the facility data was then presented to the Facility Master Plan Committee for review. The FMP Committee worked to align the needs of each school facility with the Districts goals and objectives and developed a priority list for capital improvement projects. Once the committee determined the priorities for the capital plan, possible funding sources were identified and a time line was developed to assist LVCS in addressing their priorities over the next five to seven years.

March 3, 2016 - Facility Planning Meeting 3:30pm-5:30pm

The first step of the FMP process was to have a kick-off meeting with the Facilities Master Plan Committee. During this meeting the following topics were discussed:

- Intent of FMP
- What is used for?
- Role of FMP Committee
- Where we are now...
- Three Themes (Educational Programs, Enrollment/ Demographics, and Facility Needs)
- Group breakout goal session

The Facilities Committee was broken into groups to conduct a SWOT (Strengths, Weaknesses, Opportunities, Threats) of the Dexter Consolidated School District. While the lists for each area were quite extensive, the committee determined that the overall key items for each area were:

Strengths:

- Community support/ rapport
- Parental support
- "At Risk" programs
- Tax payer support for capital projects
- Sports activities community involvement
- Outreach programs
- Generational Extended families

- Dual credit at H.S.
- Support Medical/ behavioral
- Parent support w/in schools
- Training for teachers/staff
- Shared community/ school resources and cooperation

Weaknesses:

- Safety/ security at schools
- Technology infrastructure & equipment (improvements)
- Less variety of electives
- Less upper level courses (AP-honors)
- Sports facilities could use some improvements
- Economy lack of jobs = reduced enrollment
- Drug use

- Single Parents/ Family Values
- Playground equipment
- School wireless communication
- Weak links in security
- Structural integrity (Paul D. Henry)
- Lack of focus on objectives
- Not complying with master plan
- Lack of consistency
- Lack of funding

Opportunities:

- Post-secondary Education
- Agriculture
- Eatery RHS
- Traffic flow Legion Park
- Finalize improvements MARR gym
- Input to Master Plan Process
- Follow through with Master Plan

Threats:

- State Funding Reductions/ % Sweeps
- Economic downfall
- Security Buildings
- Poor Local Economy
- Insufficient Water Resources

- Building Improvements
- Technology Improvements
- Library sources
- Community use of facilities
- Improve elective options for MS/HS students
- Better Purchasing Decisions
- Limited Building Security
- Limited Teaching Staff
- Better Purchasing Decisions
- Old Buildings Need a Lot of Work

April 26, 2016 - Facility Planning Meeting 3:30pm-5:30pm

During the second meeting discussion centered on local demographics, historic enrollment and preliminary enrollment projections, lack of available housing, growth in the community and local employment opportunities.

Breakout group work by the committee centered on what learning environments will look like in the future and how can the district's facilities compare to other surrounding school districts?" The five topics the Facilities Committee focused on were:

- It's now 2035, what kinds of changes have occurred in your district over the past 20 years? As a group describe it as if you were able to see it, realistically around you. What kinds of changes do you see in your community? What kinds of programs would need to be offered to prepare your students for success in this world?
- If the district only had enough money to correct Four (4) facility issues at each school. What would they be?
- As part of identifying some guiding concepts to measure the schools in the district, answer the following question How does the educational environment/programs in Dexter differ from those in other surrounding districts?

The end result of the discussions of these questions identified the need for facilities to be agile and flexible, as technology will be a main driver in delivering education in the future, educational programs at the high school level need to prepare students to not only for college through dual credit opportunities and enhanced curriculum's but also through providing higher skilled vocational programs that prepare students for local employment opportunities. With several of the district's facilities in need significant capital improvements and limited available funding, priorities will need to be strategic to improve the district's facilities as well as to continue to provide safe, comfortable and flexible learning environments to meet the educational needs of current and future students.

November 14, 2016 - Board of Education Work Session 5:15pm-9:30pm

Presentation to the LVCS Board of Education centered on the continued decline in enrollment, poor utilization of each district school, capital improvement needs, condition of Paul D. Henry Elementary. The LVCS Board of Education requested further information / options to be presented at the next BOE meeting.

- Enrollment (current & future)
- Utilization & Capacity of Each School
- Paul D. Henry Elementary Structural Issues
- Facility Condition/ Needs Over \$82M in needs
- Discussion

December 13, 2016 - Board of Education Presentation 5:15pm-9:30pm

Presentation to the LVCS Board of Education included proposed grade realignment changes and appropriate facilities that would be able to accommodate them with minor modifications. Updated capital improvement costs based on "right-sizing":

- School "Right-Sizing"
- Grade Realignment Options
- Updated Options Discussion
- Capital Improvement Costs
- PSFA/ PSCOC Rankings of District Schools for 2017/18

January 10, 2017 - Facility Planning Meeting 3:30pm-5:30pm

Discussion at this meeting centered on the decline in enrollment, facility deficiencies, poor facility utilization and the need to consider other facility options.

- Enrollment (current & future)
- Utilization & Capacity of Each School
- Facility Conditions
- Capital Improvement Costs
- PSFA/ PSCOC Rankings of District Schools for 2017/18
- Facility Deficiencies Over \$82M in needs

January 17, 2017 - Board of Education Presentation 5:15pm-9:30pm

Presentation to the LVCS Board of Education included final proposed grade realignments, adjusted capital improvement costs based on "right-sizing", proposed implementation plan and discussion with the Board of Education.

- Proposed Final Grade Realignments
- Adjusted Capital Improvement Costs
- Proposed Implementation
- Approval by the BOE to submit application for Los Ninos Elementary Renovation and Addition to the PSCOC.
- Discussion

January 26, 2017 - Community Forum 6:00pm-9:00pm

Community Presentation to inform parents and community members of existing facility conditions, at this meeting centered on the decline in enrollment, facility deficiencies, poor facility utilization and the need to consider other facility options.

- Summary of Existing District Conditions
- School "Right-Sizing"
- Proposed Grade Realignment and School Changes
- Discussion & Community Feedback

The Board of Education retreat at New Mexico Highlands University was a more informal setting in which to discuss community feedback, passage of the GO Bond, proposed time-lines, and logistics as they pertain to school "right-sizing" and grade realignments.

- Summary of Existing District Conditions
- Enrollment Projections based on Grade Realignment at Remaining Schools
- Implementation time-lines
- Adoption of district-wide "Right-Sizing" and grade reconfiguration by the Board of Education

March 28, 2017 - BOE Presentation & Approval 5:15pm-8:00pm

Presentation of the recommended priority projects that will be funded in part from the 2017 GO Bond and future GO Bond elections. Discussion items at this meeting centered on the district's overall facility needs as well as the need to ask the community to support a local GO Bond referendum in 2021 to continue to fund the priority projects identified in this document. The LVCS Board of Education approved the 2017-2022 Las Vegas City Schools District Wide Facility Master Plan on March 28, 2017.

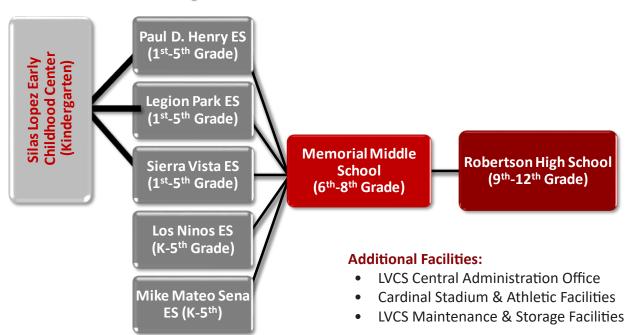

THIS PAGE IS INTENTIONALLY BLANK

2.1 PROGRAMS

2.1.1 Current Educational Programs and Facilities

The Las Vegas City Schools located in northern New Mexico, serves a student population of approximately 1,596 (2016/2017) ranging from Pre-Kindergarten through twelfth grade. The district maintains one early childhood center for kindergarten, five elementary schools, one middle school, one comprehensive high school, central administrative office, a maintenance/storage facility, and high school sports facilities. The Las Vegas community supports the district in providing a sound, basic instructional curriculum that inspires learning to a wide variety of students at all levels. In addition to basic instruction, a variety of programs serve the needs of special students, gifted and talented young people and programs which cater to students with limited English-speaking (ELL and Bilingual) proficiency; Los Ninos Elementary is the district's only Dual Language School. Currently the district does not have any charter schools.

Current District Grade Configuration & Feeder Schools

Early Childhood/ Head Start

The district has an early childhood Head Start/ Pre-K program located at Los Ninos Elementary that is operated by West Las Vegas Schools (WLVS) through a joint-use agreement. While the program serves nearly 80 students per academic year, only a small portion of the enrollment is credited to the LVCS 3-4 year old Pre-K DD program, the remainder of the students are counted towards WLVS. As of the official 40-day count for the 2016/17 school year, there were 9 Pre-K DD students enrolled in the program.

Elementary School

The LVCS elementary program consists of six schools serving grades Kindergarten through Fifth, with each grade level instructed in the core subject areas including computer skills, library, and weekly art/music classes. The Silas Lopez ECC serves at the district's primary Kindergarten feeder school for Paul D. Henry, Legion Park and Sierra Vista Elementary Schools, Los Ninos' has an integrated Kindergarten program as part of its Dual Language curriculum, and due to its rural location outside the Las Vegas city limits, MM Sena Elementary

has its own dedicated Kindergarten program. Special education services are delivered both in the general education classroom environment (inclusion) and through pull-out resource instruction as needed. The district also has identified specific schools that have expanded special education programs dedicated for gifted, autism, behavior, and other special needs program support such as PT/OT and SLP. As of the official 40-day count for the 2016/17 school year, there were 755 K-5th grade students enrolled district-wide.

Middle School

LVCS has one single traditional Middle School that serves grades 6th-8th has a total enrollment of 382 students (40-day 2017/17). Classes are held on a rotational schedule meeting at seven intervals or "periods" throughout the day. Courses required include: English, Literature, Math, Pre-Algebra, Life and Earth Sciences, Geography, New Mexico History, U.S. History, Keyboarding/Computer Literacy, Computer Applications and Physical Education as well as other elective classes. Special Education services are provided through inclusion and in separate pull out classrooms.

High School

As the 2016/17 school year the district's single comprehensive high school - Robertson High had a 40-day official enrollment 450 students in grades 9th-12th. The district offers a solid academic curriculum that is designed to prepare students for entry into college and other post-secondary educational training programs including vocational schools and military service, along with various extra-curricular/co-curricular programs and sports. Robertson High School is working hard to keep pace with technology through offering various computer based instruction and dual credit options.

Special Education

Students who are referred to the Special Education Program must be evaluated to determine if they meet qualifications and the need for special services. Special Education courses are developed to address student needs according through an Individual Education Plan (IEP). Students in the program generally have a combination of Special Education and Inclusion Classes.

LVCS Middle/ High School Organizations

The Las Vegas City Schools supports activity programs that are open to all students. The district attempts to provide a diversified and balanced programs of extra classroom activities including special interest clubs, physical activities, student government, class organizations, class activities, social activities, etc., at each school. These extra-curricular/co-curricular programs are offered in conjunction with the core curriculum and make up the educational programs at the middle and high school level.

District Athletic Programs

The Athletics/Activities Department oversees a variety of athletic programs offered to eligible students in the middle and high school grade levels. Fall Sports include: Cross Country, Football, High School Soccer, Volleyball, Basketball and Wrestling. Sports played during the spring season are: Baseball, Softball, Golf, Tennis, Track, and Soccer. Cheerleading and Dance, including various other activities are offered throughout the year.

| LVCS SPORTS / EXTRA CURRICULAR ACTIVITIES | | | | | | | | | | | |
|---|------|-------|----------------|-----------------|--|--|--|--|--|--|--|
| | Boys | Girls | Grades 6th-8th | Grades 9th-12th | | | | | | | |

| Tennis | Х | Х | | Х | | | | | | | |
| Track & Field | Х | Х | Х | Х | | | | | | | |

2.1.2 Anticipated Program Changes

As part of the Facility Master Plan process both the LVCS's educational programs and facilities were evaluated and analyzed. Currently the district has nearly twice the amount of square footage needed to serve its existing and future student population. In an effort to improve educational programs and equity throughout the district, LVCS will be implementing a "Right-Sizing" of schools initiative as of the 2017/18 school year which will include grade realignment and facility decommissioning. As part of this initiative that was approved by the LVCS Board of Education on February 16, 2017 the following grade realignments and facility retention has been identified as follows:

- Silas Lopez Early Childhood Center (SLECC): Will continue to serve traditional Kindergarten students until 2019/20 when a new classroom addition is completed at Los Ninos Elementary School. SLECC will also become the new location for the WLVS Head Start/ Pre-K Program.
- Los Ninos Elementary: Will serve grades 1st-3rd grade as of the 2017/18 school year and will add traditional Kindergarten students as of the 2019/20 school year once the new classroom addition is completed. The school currently has a "Dual Language" program in place that will remain for parents wishing to have their students participate including two kindergarten classes, and a traditional elementary program will serve the remaining students.
- Sierra Vista Elementary: Will serve grades 4th-6th grade as of the 2017/18 school year. The "Dual Language" program in place at Los Ninos will expand to 6th grade for parents wishing to have their students participate, and a elementary program will serve the remaining students.
- Robertson High School: Will serve grades 7th-12th grade as of the 2017/18 or 2018/19 school year. A new 7th/8th grade Academy will be established on the high school campus, and will operate independently on it's own bell schedule separate from the high school, however it will share campus resources improving overall campus utilization.

While all facilities that will remain are in need of major renovation and facility improvements, only one school

2017 - 2022 Facility Master Plan • Las Vegas City Schools

will require a small 4.5 classroom addition (Los Ninos Elementary) to accommodate the "Right-Sizing" initiative. The facilities identified for closure as of 2017/18 and future demolition are: Paul D. Henry Elementary, Legion Park Elementary, Memorial Middle School. Once the classroom addition is completed at Los Ninos Elementary and the remainder of the Kindergarten program relocated, the Silas Lopez Early Childhood Center will be either re-purposed for expansion of the Head Start/ Pre-K program or closed and the property sold "as-is".

2.1.3 Shared / Joint Use Facilities

The district has a formal policy for community use of sites and facilities. The policy is available on the district's WEB site at:

http://www.cybercardinal.net/images/Maintenance/use%20of%20facility%20application.pdf

2.2 SITES & FACILITIES

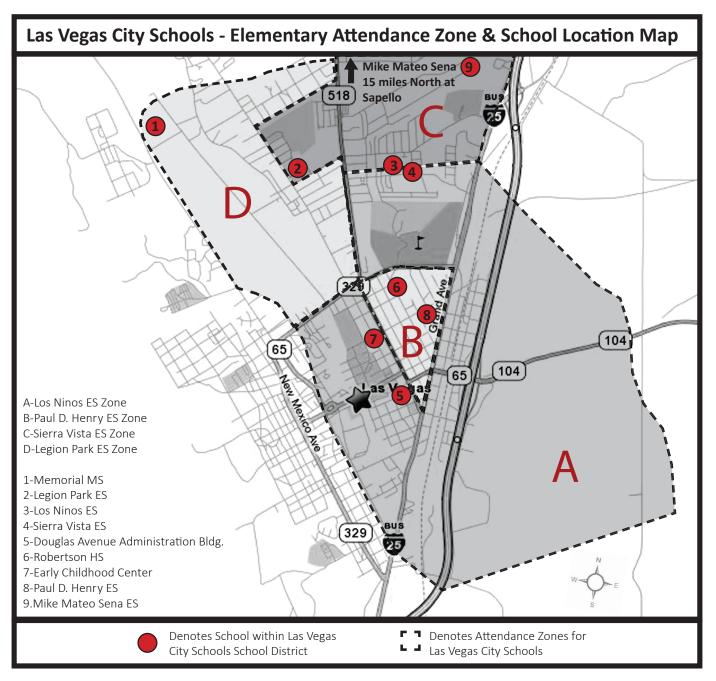

2.2.1 District Boundary Map

Located along the I-25 corridor in northern San Miguel County, the City of Las Vegas is a small city situated 65 miles to the east of Santa Fe and 110 miles south of Raton. At nearly 1,261 square miles, the LVCS District attendance boundary borders the West Las Vegas, Pecos, Mora, Wagon Mound and Roy School Districts. The district has six elementary schools, one middle school, and one high school that serves the families within it's attendance zone, which in the northwestern area is very rural. All but one of LVCS's schools is located within the city limits of Las Vegas - Mike Mate Sena Elementary is located 15 miles to the northwest in Sapello.

Las Vegas City Schools 1,261 Sq Miles 25 [120] Santa Fe Las Vegas City Schools Vegas San Miguel County Tocumcari

2.2.2 - Facility Inventory

Las Vegas City Schools currently owns, maintains and operates eight school sites with a combined site acreage of 137 acres and a total overall square footage of 470,771. The district also owns and maintains two non-educational use facilities: Central Administrative Office and Maintenance Complex for an additional 2.8 acres and 38,299 SF. There are currently six elementary schools that have a combined square footage of: 177,695, with only one of those schools having a portable facility - MM Sena Elementary. The district has one single middle school with 101,127 SF and one high school with 173,924 SF, both of these school sites have athletic fields and support facilities.

See Table 2.2.2 for an overview of the district facilities, additional details about each facility can be found in Section 4.1.

Future Changes to Facility Inventory

Currently, only the elementary schools are divided up into neighborhood attendance zones of which there are five zones: Legion Park, Sierra Vista, Paul Henry, Los Ninos, and MM Sena. Only the Silas Lopez Early Childhood Center does not have an attendance zone as it is currently the district's primary Kindergarten school. Both the middle and high schools serve the entire student population within the districts boundary regardless of address.

As part of the district's "Right-Sizing" plan, as of the 2017/18 school year as the new grade realignments begin to take effect and several facilities are decommissioned, the only elementary attendance zone that will remain will be that of MM Sena Elementary as all of the elementary students residing within the Las Vegas city limits will be combined into one attendance zone. Facilities identified for decommissioning and future demolition as of the 2017/18 school are Legion Park Elementary (31,733 SF), Paul D. Henry Elementary (30,442 SF), Memorial Middle School Main Classroom Building (72,637), and at Robertson High School the Chorus Building (2,989 SF) and Quintana Building (8,788 SF). Once demolished the district will have achieved a square footage reduction of 146,589 SF or close to nearly 29% of its current facility inventory.

2.3 DISTRICT GROWTH

2.3.1 Population Trends

The Las Vegas City Schools attendance boundary is primarily located in San Miguel County with a very small portion located in Mora County. Two other school districts are also located in San Miguel County: West Las Vegas Schools and Pecos Municipal Schools. San Miguel located in northern New Mexico and consists of 4,736 square miles of land area.

The City of Las Vegas is home to the county seat for San Miguel County, which is also the largest city and primary retail base for the county. Some of the other small rural communities located in San Miguel County are: Bernal, Garita, Holy Ghost, Ilfeld, Montezuma, Rociada, Sapello, Serafina, South San Ysidro, Tererro, Trementina, and Valles de San Geronimo.

According to the 2010 Census, there were 29,393 residents in San Miguel County which was a decrease of -2.4% county-wide since 2000, and based on updated information from the US Census' American Community Survey in 2015, the population has decreased another -2.4%. While there continues to be a population decrease county-wide, Las Vegas has also been experiencing population decreases similar to that of the county. Between 2000 - 2010, population in Las Vegas decreased nearly -5.6%, and since 2010 has decreased only -0.02%.

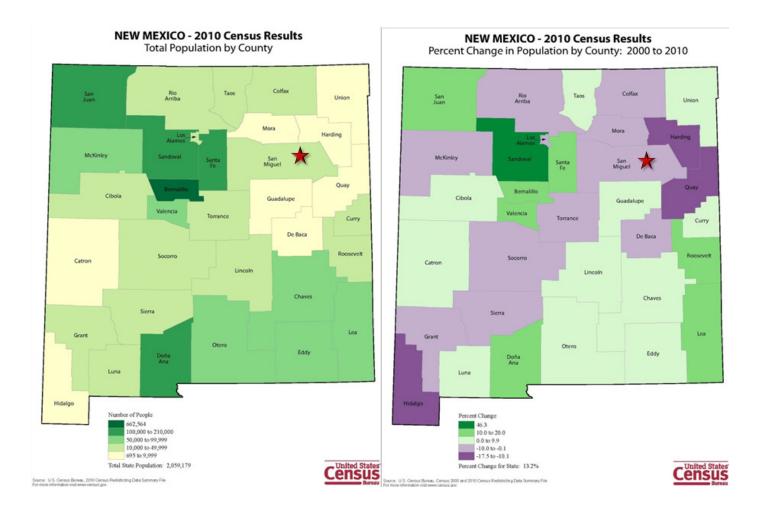

The decrease in population can be attributed to an aging population in the area and the lack of economic development opportunities along the I-25 corridor. Since 2000, San Miguel County has lost approximately -19.7% of its under 18 residents, while Las Vegas has lost nearly -22.9% of its under 18 residents. This population loss has had a direct impact on not only the enrollment of Las Vegas City Schools but also on the enrollment of West Las Vegas Schools.

| Population | 2000 | 2010 | % of Change (10 Year) | ACS* 2015 | % of Change (5 Year) |

Source: US Census 2000 & 2010 DP-01, 2015* American Community Survey DP-05 5Yr

The maps below identify population distribution throughout the State of New Mexico, since the 2000 Census, San Miguel County decreased its population at a modest rate (-2.4%) over the ten year period primarily due to an aging population and local economic conditions.

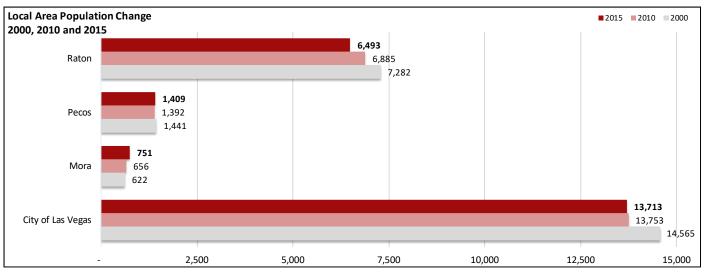

Total population growth in San Miguel County decreased 2.4% from 2000-2010, while the state population overall grew 13.2%. In 1910, the population of San Miguel County was close to 23,000 residents and peaked in 1940, as there began a shift in the State's economy towards the Middle Rio Grande area. Within forty years the population declined to less than that of 1910 before starting a gradual reverse of in-migration residents to the area, peaking once more in 2000 before beginning another gradual decline. The chart below documents the changes in population that has occurred in San Miguel County over the past 100 years, while the population of Las Vegas has remained relatively stable over the past sixty years with only minor fluctuations in its population.

Source: Bureau of Business and Economic Research, University of New Mexico: Historic population 1910-2015

Only the population Raton has experienced similar rapid population declines as that of Las Vegas over the past fourteen years. The two communities that experienced the population growth were Pecos and Mora, due mostly in part to the area's diversification in economic development and tourism. The chart below shows the changes in population in Las Vegas and the surrounding major communities since 2000.

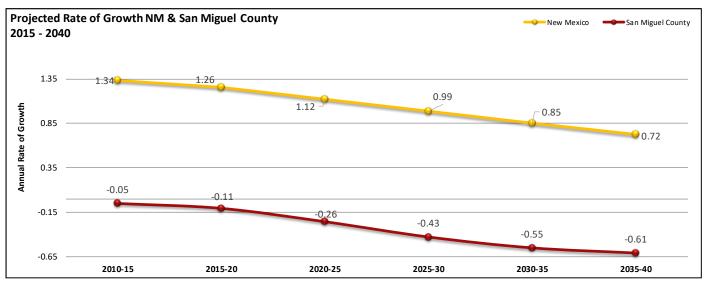

Source: U.S. Census Bureau, DP01 - 2000 & 2010; U.S. Census Bureau, Population Division - 2010-2015 Population Estimates

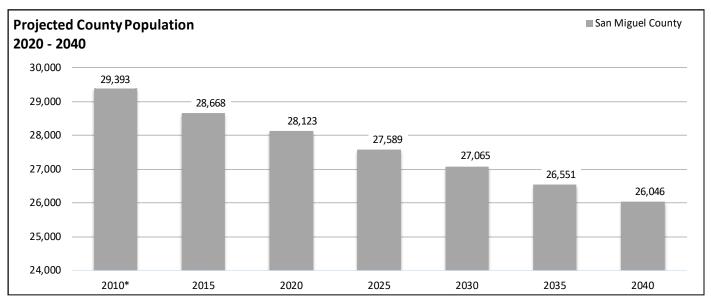

Projected Population

From 2015 through 2040, the Bureau of Business and Research (BBER) at UNM, projects annual population growth rates to stay between -0.11% to -0.61% for San Miguel County for the next twenty years as compared to the projected growth statewide as a whole of more than 1% until 2025 and then slowing to just less than 1% between 2025 and 2040.

Source: New Mexico County Population Projections July 1, 2015 to July 1, 2040, Geo-spatial and Population Studies Group, University of New Mexico Released November 2012.

This projection results in a continued decline in population for San Miguel County over the next twenty year period of about 9.1%. The greatest challenge that all of the communities in San Miguel County will continue to face in regards to a declining and aging population, including Las Vegas, will be in being able to reverse this trend through retaining those that are coming of working age and recent college graduate through creation of a solid economic development plan that creates more private sector jobs with higher paying wages and encourages younger workers to remain in the community.

^{*} Note: 2010 County Population is Actual Count Per 2010 US Census.

2.3.2 Local Area Demographics

The 2015 US Census identified San Miguel County's (which is where both the City of Las Vegas is located and where the LVCS's attendance boundary encompass') racial composition as comprised of 76.4% Hispanic, 19.0% Anglo (not Hispanic), 1.3% African American, 0.9% American Indian, 0.9% Asian, 0.1% Native Hawaiian/Pacific Islander and 0.9% of people identifying with two or more races as indicated in the adjacent chart.

According to the 2015 US Census American Community Survey responses, the racial breakdown of residents within the City of Las Vegas is very similar in nature to that of the majority of the population in San Miguel County, as it is also predominately Hispanic, with the next largest population being White/Anglo.

While the local population residing within the city limits of Las Vegas continued to experience a small decrease of 0.02% to 13,713 residents in 2015, the majority of residents having school aged children attend either Las Vegas City Schools or West Las Vegas Schools.

Las Vegas Population by Age

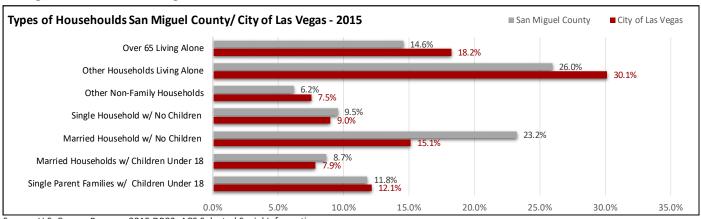

In 2015, based upon the most recent US Census estimates combined with information from the State of New Mexico, population within Las Vegas decreased to 13,713 residents. As of 2015, the median age of all residents in Las Vegas was 40.8 years as compared to 40.7 in 2010, and 34.0 in 2000 with the median age of males in 2015 being 39.3 and females 41.6 which is on the far upper end of prime childbearing ages. This is very similar to the 2015 median age within San Miguel County of 42.9 years, both of which are above the overall State of NM median age of 36.8 years. The chart below breaks down the population for Las Vegas by age group between 2000. 2010. and 2015.

Source: U.S. Census Bureau, 2010 Census, Demographic Profile Summary File and 2015 B0101*: ACS Age & Sex

Households & Families

Based on 2015 US Census data, there were approximately 5,081 households in Las Vegas, which is a decrease of 11.7% since 2010 from 5,751. The average family size in Las Vegas was 3.71 which reflects an increase in size from 2.93 in 2010. Families with children made up 27.5% of the households in Las Vegas, which just slightly more than that of San Miguel County at 26.7%. This figure includes both married-couple families (7.9%), and single parent families (12.1%). Non-family households with school aged children also made up 7.5% of all households in Las Vegas. Most of the non-family households were people living alone, but some were composed of people living in households in which no one was related to the householder as well as those that are aged 65 and older living alone.

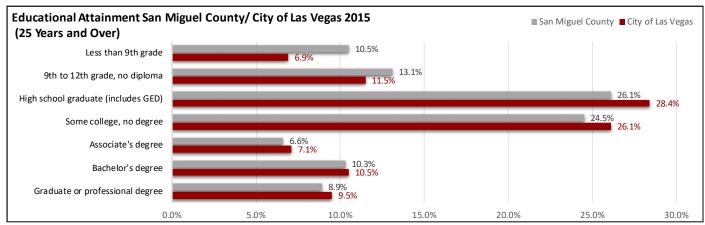

Source: U.S. Census Bureau, 2015 DP02: ACS Selected Social Information

Education

During 2015, 81.6% of people twenty-five years of age and over in Las Vegas had at least graduated from high school and 27.1% had an Associates degree or higher. Approximately 18.4% were dropouts; they completed less than 9th grade or did not graduate from high school. Total school enrollment (official 40-Day count) in Las Vegas City Schools was 1,596 during the 2016/17 school year and high school enrollment was 450 students. Based upon the new 4-year cohort graduation rate calculations provided by the NM Public Education Department, the most recent available data shows that Robertson High School had a graduation rate of 68% for the graduating Class of 2015/16 as compared to the State of NM average rate of 71%.

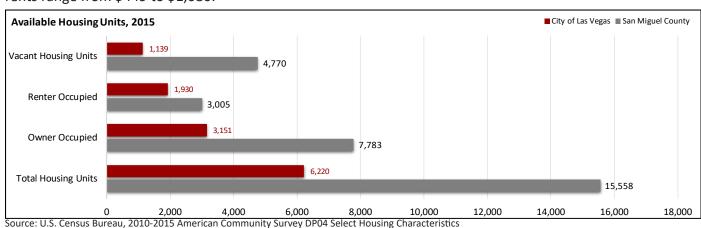

Source: U.S. Census Bureau, 2015 DP02: ACS Selected Social Information

Housing

While over the years new housing has been built on an individual basis, residential construction has been considerably reduced with the housing development moratorium due to severe sustained drought, multi-year water restrictions and an inadequate long term water supply. Since the early 2000's, a total of approximately 357 new houses were constructed, with a majority of the community's housing stock having been constructed between 1960 and 1999. The list price for a single family home in Las Vegas ranges between \$59K - \$1.9M with the average list price around \$150K (March 2017) with 176 single family homes currently listed for sale, many of which have more than 120 days on the market. The average mortgage cost in Las Vegas is \$890 per month.

There are 12 low-income housing apartment complexes which contain 844 subsidized apartments for rent in San Miguel County. There are 754 other low income apartments that don't have rental assistance but are still considered to be affordable housing for low income families. Fair Market Rents are used to establish the payment standards for the Section 8 Housing Choice Voucher Program. In San Miguel County, the fair market rents range from \$449 to \$1,080.

Educational Facility Planning Consultants

2.3.3 Local Economy

A study done by the UNM Bureau of Business and Economic Research in 2010¹, found that the growth in population for San Miguel County will continue to fall behind that of the remainder of the State of NM as the county's population continues to age or "gray" and fewer residents are of child bearing age. The impact of this "slow growth and graying" of the populations of both San Miguel County and City of Las Vegas will have long term lasting implications on the economy and opportunities to bring economic development to the area. Regardless of county or city residency, the common goal throughout the region is the same -find ways to create job opportunities to keep youth in the area, create prosperity and raise a family without sacrificing lifestyles and traditional cultures. A common theme expressed by the community is encourage growth that is compatible, does not conflict with community values, and protects the area's natural resources.

The City of Las Vegas still serves as the regional commercial hub and provides regional educational, healthcare and government assistance services to the seven northeastern New Mexico counties. This market contributes significantly to the future sustainability of Las Vegas and San Miguel County. The city however, has seen a downward trend in employment with the greatest losses in retail, industry, restaurant, information, and professional services. The national economy and decline in the construction industry have also impacted both San Miguel County and Las Vegas. Low Gross Receipts Tax revenues potentially lower quality of life, city and county services, and dramatically impacts investments in economic and community development initiatives. The out-migration of the areas qualified workforce has also affected

the community's ability to compete with other neighboring cities and states to attract new businesses and potentially stem its out-migration of residents. The flight of its population in the area creates a low population market area which has increased the challenge to the community recruit retail and service businesses.

Over the past few years there have been a few positive economic indicators for the City of Las Vegas. The largest job gains and revenue centers are concentrated in administration, health care and lodging. City lodgers tax has remained level with slight increases over four years. These industries could represent Las Vegas' and San Miguel County's highest potential growth industries. The presence of Alta Vista Regional Hospital (even with the recent staffing changes), New Mexico Behavioral Health Institute, as well as the strong local education industry, offers significant opportunities to develop and recruit high paying jobs. Tourism has high growth potential nationally, for the State of New Mexico, as well as for the San Miguel County region, based on the area's strong tourism assets with nature, recreation, art, historic architecture, and culture. ¬

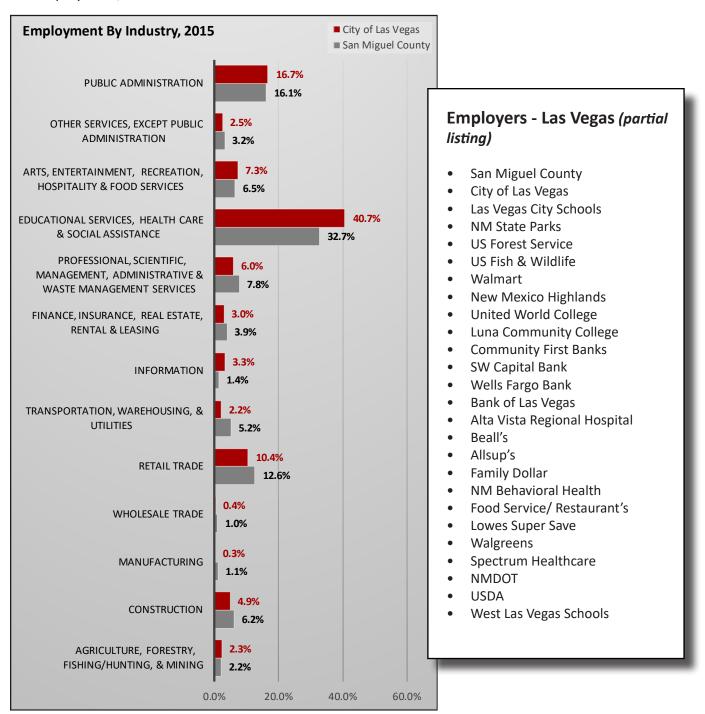

Historic downtown retail groups are anxious to focus limited resources on retention and expansion initiatives, as well as the promotion of the tourism industry to prevent further business closures. There is also strong movement to preserve historic commercial buildings and homes through economic development initiatives including promotion of re-use and live-work as well as historic district tax incentives.

¹ UNM Bureau of Business and Economic Research - An Assessment of the San Miguel Economy, Dr. Jeffery Mitchell, August 2010.

INDUSTRY EMPLOYMENT DISTRIBUTION

According to the NM Department of Workforce Solutions the total number of civilian employees located in San Miguel County, New Mexico in December 2016 was 11,019. The top three major industry sectors within Las Vegas are Education Services & Health Care at 40.7%, followed by Public Administration with 19.4% of the employment, and Retail Trade at 10.4%.

U.S. Census Bureau, 2011-2015 American Community Survey DP03 Employment by Industry

The table below identifies areas of employment within San Miguel County from 2005 - 2015. In 2015, 60.3% of all workers in San Miguel County were employed in the Private sector which is an increase of 7.6% over the past 10 years; while all Government sectors accounted for 39.7%, which has decreased approximately 15.4% over the past 10 years. Within the Private sector, the industries with the highest percentage of employment included: Healthcare at 22.1%, Retail Trade at 11.1%, and Accommodation and Food Services at 9.8%. For the Public Sector: Education, Local and State governments were the largest employers with over 55% percent of total employment. The majority of the jobs identified are located within the City of Las Vegas area, although there are many small businesses including agriculture and ranching located in the outlying rural communities that contribute to the county's overall economic development.

D Withheld to avoid disclosing confidential data. Data that are not disclosed for individual industries are always included in the totals. Therefore, the individual industries may not sum to the totals.

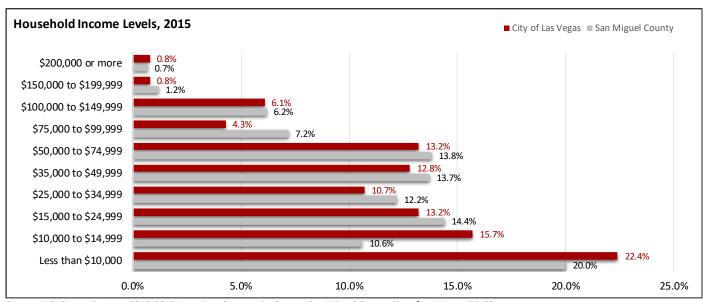

Personal income, an indicator produced by the U.S. Department of Commerce, is a major index of economic well-being and is broadly defined as the current income received by residents of an area from all sources. The components of personal income are net earnings (adjusted for residence), transfer payments, dividends, interest, and rent. Per capita income is average income per person and is calculated by dividing total personal income by the resident population.

In 2015, San Miguel County had a per capita personal income (PCPI) of \$32,461. This PCPI is ranked 25th in the State of NM out of 33 counties and was 14.4% below the State of NM average of \$37,938. The 2005 - 2015 PCPI in San Miguel County reflected an average increase of 3.6% per year as compared to the State of NM average increase 2.9% over the 10 year period. In 2015, 29.7% of the San Miguel County population was considered to be living in poverty.

Source: U.S. Dept. of Commerce, Bureau of Economic Analysis. Data update released: May 30, 2016

In 2015, the median household income for the City of Las Vegas was \$23,904 which is 18.2% *less* than that of the median household income of \$29,237 for San Miguel County, and 35.3% of the City of Las Vegas' population was considered to be living in poverty. According to the NM Department of Workforce Solutions most recent published data (3rd Qtr 2016 - February 2017), the average weekly wage for San Miguel County as of October 2016 was \$593 which is 28.6% below the State of NM average of \$830.

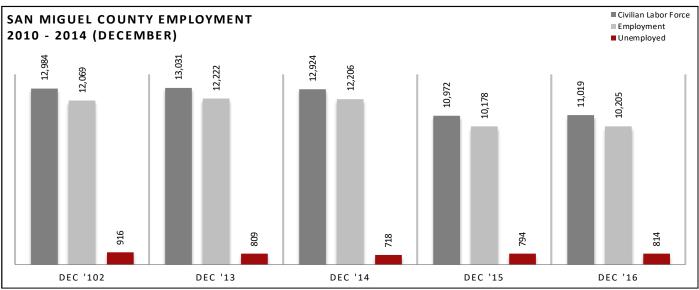

Source: U.S. Census Bureau, 2010-2015 American Community Survey, San Miguel County, City of Las Vegas- DP-03

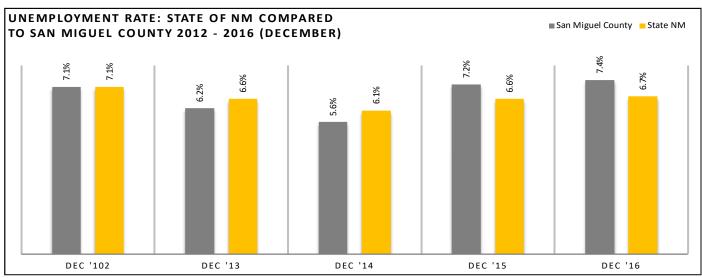

EMPLOYMENT & WAGE DATA

According to the NM Department of Workforce Solutions, employment losses in the Northeastern counties during the recession were greater than those of other counties in the state. Employment losses also appear to have varied somewhat for the region. San Miguel County experienced job losses in 2012, primarily in the Las Vegas area which was followed by a slight recovery in 2013 and over the past three years available jobs within the county have fluctuated as well as have the amount of available workers. Both City of Las Vegas and the San Miguel County Economic Development Corporation working hard to continue to attract new business' to the area and improve wages.

Source: New Mexico Department of Work Force Solutions - Table A Civilian Labor Force, Employment, Unemployment and Unemployment Rate (Dec 2012 -2016)

San Miguel County's unemployment rates have typically been slightly below or even with those of the State of NM average and have had a much slower than average rate recovery. The county continues to see some stagnation in job growth, unemployment and claims did begin to decline in the Winter of 2014 to 5.6% from a high of 7.1% in the Winter of 2012 but rose to higher than the State of NM average the following year in 2015. As of December 2016, San Miguel County's unemployment rate has again increased to 7.4% which higher than the State of NM's average unemployment rate of 6.7%.

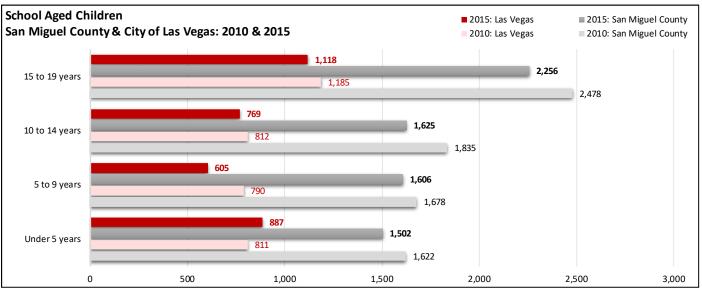

Source: New Mexico Department of Work Force Solutions - Table A Civilian Labor Force, Employment, Unemployment and Unemployment Rate (Dec 2012 -2016)

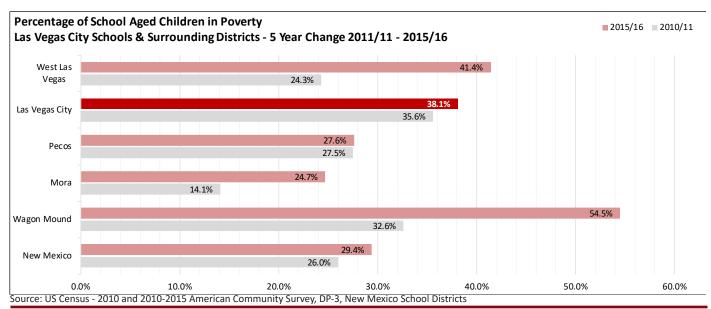

2.3.4 - School Aged Children

Since the 2010 US Census, the number of school aged children in San Miguel County has decreased in all age groups between 4.3- 11.4%. The City of Las Vegas has experienced a slight increase in the under 5 age group of about 9.4%, however experienced a sharp decline of nearly 23.4% in the five to nine age group. The city also experienced declines in both the ten to fourteen and fifteen to nineteen ages groups between 5.3-5.7%. This decrease in school aged children is primarily due in large part to the poor economic conditions in the area and families relocating. Birth rates have however, have also decreased over the past three years which will may impact the district's elementary enrollment pattern over the next 5 years.

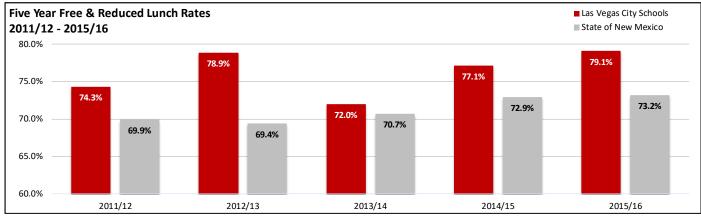

Source: US Census - 2010 DP-1 and 2010-2015 American Community Survey, City of Las Vegas / San Miguel County Population

Over the past five years, the child poverty rates for students at Las Vegas City Schools, as well as surrounding school districts have increased with the largest increases in child poverty rates being in Mora, West Las Vegas and Wagon Mound. Due to the lack of economic development in the area that have impacted the local economies, child poverty rates are expected to continue into the future at similar rates. Another indicator of student poverty rates is can be found in the increase/ decrease rates of students receiving free and reduced lunches within each district.

As of the 2015/16 school year (most recent published data), approximately 79.1% of the students enrolled at Las Vegas City Schools in grades PK-12th grade received free or reduced lunch. While this figure has slightly increased over the past year, the district's rate overall is consistently above that of the State of NM as a whole. Over the past five years, Las Vegas City Schools has ranged between 1.3 - 9.5% above the average free and reduced lunch rate for all district's combined in the State of New Mexico as shown in the table below and is expected to remain in this the same range over the next five years.

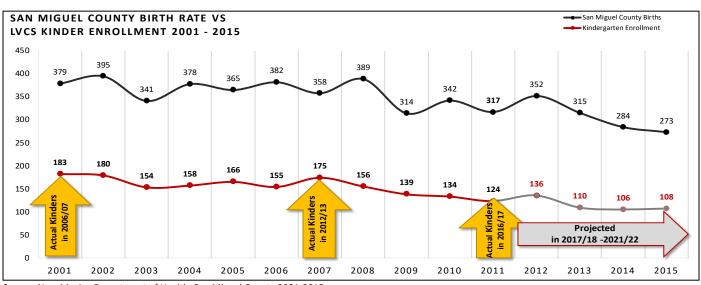

Source: New Mexico Public Education Department - Free & Reduced Lunch Rates (2011/12-2015/16)

San Miguel County Birth Rates

The San Miguel County trend in birth rates although lower than in the 1990's, was fairly stable between 2001 and 2008 with minimal fluctuations between highs and lows. In 2009, the county experienced it's first significant decline in birthrates that can be tied to the national recession and overall health of the local economy and has not been able to recover to pre-2009 levels. The decline in birthrates since the early 2000's have been reflected in the overall decline in enrollment at both Las Vegas City Schools and West Las Vegas Schools. Approximately 42.8-47.2% of San Miguel County's births impact kindergarten and first grade enrollment at Las Vegas City Schools.

The decrease in birth rates experienced between 2011-2015 will begin to impact LVCS at the elementary level over the next five years and will continue to impact the upper grade levels of the elementary, middle and high school enrollments for the next 10 years. The local area birth rates cannot account for in-migration of families from elsewhere that also have a direct impact on current and future enrollment.

2.4 ENROLLMENT

2.4.1 Past / Current Enrollment

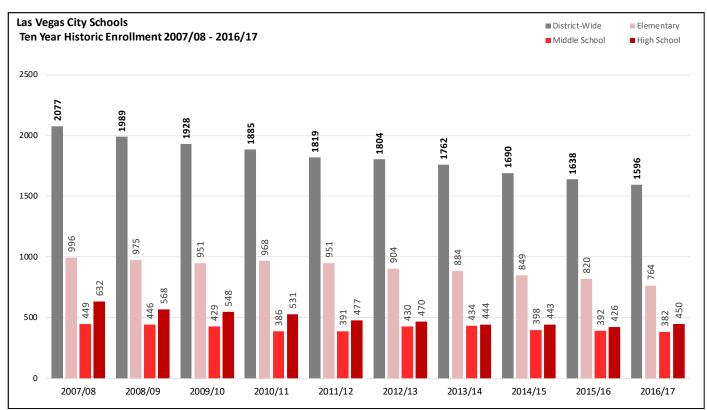

According to past historic enrollment trends, overall district enrollment has decreased from 2,077 students enrolled during the 2007/08 school year to 1,596 students as of the official 40-day count for the 2016/17 school year. That figure equates to a decrease of 23.2% students over the course ten years or approximately -2.9% per year. The district hit its lowest enrollment of 1,596 students as of the current school and enrollment has not increased over the ten years.

Elementary enrollments have experienced a steady rate of decline in partially due to lower birthrates beginning in the early 2000's. Overall elementary enrollment has declined 23.3% over the past ten years or approximately 2.9%, with

the largest decrease being in the 2016/17 school year of 6.8%. Both the middle and high school have also experienced declines in enrollment with the middle school declining 14.9% or about -1.6% per year, and the high school experiencing the largest decline of nearly 28.8% or approximately -3.6% per year.

The following chart shows district wide enrollment trends by elementary, middle school and high school levels beginning from the 2007/08 school year.

Source: New Mexico Public Education Department - Official 40-Day Reporting

The table below identifies the past ten years of enrollment for Las Vegas City Schools. The figures show the amount of students enrolled at each grade during each school year. Grades are broken up according to school level based on the current grade configurations, which will be changing as of the 2017/18 school year as part of the District's "right-Sizing" initiative.

Elementary Enrollment - Grades PK-5th

Las Vegas City Schools is comprised of one early childhood center serving a large portion of the district's kindergarten students and five additional elementary schools. Only Los Ninos Elementary because of it's dual language program and Mike Mateo Sena Elementary due to its rural location outside the city limits offer kindergarten. Los Ninos Elementary is also the current location of the joint LVCS/ WLVS Head Start/ Pre-K Program, students enrolled in this program other that DD PK LVCS students are not counted in the district's official enrollment but average approximately 70-80 students per year. The remaining three elementary schools: Legion Park, Paul D. Henry and Sierra Vista Elementary serve grade levels 1st-5th grade.

Over the past ten plus years, enrollment at the elementary grade levels has steadily declined nearly 23.3% directly impacting each elementary school within the district, and subsequently the middle and high schools. All of the schools have gone from having at least two classes per grade level to in most cases only having one class per grade level or two partially filled classes. The decline in enrollment has impacted the number of FTE's at each site as well as special education and itinerant staff that have to travel from school to school to provide services or instruction. The decrease in enrollment has also resulted in poor utilization of each of the elementary schools as well. The charts below illustrate the ten year enrollment history at each of the districts elementary schools.

Middle School Enrollment - Grades 6th-8th

Las Vegas City Schools has one single middle school campus - Memorial Middle School that serves grades 6th-8th grade and over the past ten years has experienced an overall decrease in enrollment of nearly 14.9% as larger cohorts have already moved to the high school level. The district experienced its lowest middle school enrollment as of the current 2016/17 school year with only 382 students in all 3 grades. While the middle school does lose a few students as they transition from elementary to middle school, it has been able to maintain between 90-95% of each cohort as students advance. Based on the enrollment trends at the elementary level, enrollment in the middle school grades are expected to continue decline over the next 5 years, which will have a direct impact on programs at the middle school and will further reduce utilization of the facility.

High School Enrollment - Grades 6th-8th

Las Vegas City Schools has one single high school campus - Robertson School that serves grades 9th- 12th grade and over the past ten years has experienced an overall decrease in enrollment of nearly 29% as larger cohorts have begun to upward to the high school level. The district experienced its lowest high school enrollment in 2015/16 with only 450 students in all 4 grades. While the high school does lose a few students as they transition grade levels, it has been able to maintain between 90-100% of each cohort as students advance. Based on the enrollment trends at the middle school, enrollment in the high school grades are expected to continue decline over the next 5 years, which will have a direct impact on programs that can be offered at the high school.

Proposed Grade Reconfiguration 2017/18

In an effort to improve educational programs and equity throughout the district, LVCS will be implementing a "Right-Sizing" of schools initiative as of the 2017/18 school year which will include grade realignment and facility decommissioning. This initiative was approved by the LVCS Board of Education on February 16, 2017 and will be submitted to NMPED for approval in April 2017. The enrollment projections in the next section reflect the new grade realignments at the remaining school facilities.

2.4.2 Projecting Enrollment: The Cohort-Survival Method

Various methods might be employed to forecast enrollment changes. If one thinks of future enrollment as a function of past trends, one could use historical trends as a place to start. Such trends can be extrapolated to predict future enrollment. Statistical analysis also can be employed to estimate future enrollment based on changes in certain critical variables. However, although these and other techniques have been used to predict demographic trends including future enrollment, the method most widely employed and accepted for predicting future school enrollment is the "cohort-survival" method. This method is considered the most reliable and is used to determine the school districts future enrollment. It captures the key determinants of enrollment, yet also allows for changes in historical trends, is relatively simple to apply and the data requirements are reasonable and usually easily fulfilled.

The major assumption underlying the cohort survival method is that the past to a large extent is a reasonable predictor of the future: that is, given the number of births, the net effects of all other factors (migration, policies, retention rates, new home construction, etc.) remain in relative balance.

The cohort-survival method requires the calculation of the ratio of the number of children in one grade in one year compared to the number of children who "survive" the year and enroll in the next grade the following year. Fluctuations in such data from year to year create a pattern over time from which an average rate may be calculated to project enrollment. For example, if over a period of years, an average of 95 percent of the enrollment in grade 2 goes on to grade 3, and if 100 children are now enrolled in grade 2, the method (without any modifications) will predict that there will be 96 children in grade 3 next year. Clearly an important aspect of this computation is deciding the appropriate time period over which to compute the average grade-to-grade ratio. In areas with rapidly changing demographic trends, shorter time frames are usually better, whereas in communities with more stagnant trends, longer time periods are preferred.

Forecasts for successive years must take as their starting points an estimate of the number of children entering kindergarten. These estimates are made by methods similar to those described above. An average birth to kindergarten survival rate is obtained by comparing known kindergarten enrollments to the number of births five years earlier. One computes this "birth to kindergarten" ratio over some relevant period of time and then applies this ratio to the number of births five years previously to derive a kindergarten enrollment projection for the current year. For example, if the average birth to kindergarten ratio was found to be 120 percent, a reasonable estimate for kindergarten enrollment would be the number of births (say 50) times 120 percent (60).

The cohort survival method is a function of two key variables, (1) the number of births, and (2) the calculated survival rates. As noted above, projections of elementary enrollment are limited to five years at most with actual birth data. Beyond five years, the number of births must be estimated, which leads to greater potential for error. Various techniques do exist for projecting birth rates and can be applied to generate elementary grade enrollment projections further into the future, but these must be viewed with a reduced level of confidence.

Once the model has been run for the district's zone, each school is adjusted to reflect changes in growth / decline which are not picked up in the projection model's histories. A few examples where corrections are required include areas where:

- New construction is anticipated to exceed the pace of historical construction. An area is reaching build-out and all new construction will cease or slow down.
- Number of out of district / boundary students increases/ decreases
- An unprecedented slow-down or increase in the economic market
- Attrition at the middle and high school levels due to drop-outs, charter school attendance, home schooling and private schools.

Reliability of the Cohort-Survival Method

The reliability of the cohort-survival method is related to both the number of years one is projecting as well as the relative volatility of the historical data. Projections covering five years or less, especially at the elementary level, tend to be more reliable than projections going out more than five years. In addition, in some communities the numbers of births, population, household size, and net migration rates have held relatively steady which increases the reliability of the results. In other communities, one or more such variables exhibit extreme variation leading to less reliable results and adjustments need to be made to accurately reflect the changes that are occurring within the community based upon the local demographic information.

Reliability of the Cohort-Survival Method

The reliability of the cohort-survival method is related to both the number of years one is projecting as well as the relative volatility of the historical data. Projections covering five years or less, especially at the elementary level, tend to be more reliable than projections going out more than five years. In addition, in some communities the numbers of births, population, household size, and net migration rates have held relatively steady which increases the reliability of the results. In other communities, one or more such variables exhibit extreme variation leading to less reliable results and adjustments need to be made to accurately reflect the changes that are occurring within the community based upon the local demographic information.

2.4.3 Future Enrollment

District enrollment projections are developed based on a cohort survival method which is the standard for projecting school enrollments. In this method:

- The number of students in a cohort (a group of students in a certain age group who move together through one grade level to the next) is tracked through past grades. Survival rates (ratios of the number of students who remain from one year to the next) are calculated from historical enrollments.
- Prevailing birth rates (for kindergarten) and average survival rates (for other grades) are used to calculate future enrollments.

As warranted, ratios were adjusted slightly to reflect factors such as continued declining birthrates, opportunity for economic development in the San Miguel County/ Las Vegas Area and the in-/ out-migration of students from outside the district were identified during the analysis. Since the cohort survival method addresses students who are currently in the system, it tends to be fairly accurate from five to seven years.

Three enrollment projection scenarios were developed, based on trends during the past five years:

- Low Range is based on the average 5-year historic enrollment trends if economic development continues to lag, and experiences a higher rate of out-migration in addition to the existing lower birth rates. Which in the case of LVCS, the district would to decline in enrollment at a faster rate will have an average five year decline rate of -6.4%.
- *Mid Range (Average)* is based on the average enrollment trends of the past five years, with some adjustment to reflect the unique local demographic conditions that are consistent with current trends and programs in place by the district. This range is considered to be the most likely scenario since it assumes continuing a small decline in elementary enrollment due to decline in birthrates over the past five years, and flat growth over the planning horizon for middle and high school. The average annual growth rate is projected to continue to decline by -2.9%.
- **High Range** based on the average enrollment trends of the past five years, this range assumes that the some progress can be made with economic development in the area and that the district can implement programs to retain and attract new students into all grade levels. The anticipated growth rate for the high range is expected to slightly decline by -0.5%.

Mid-Range District Enrollment Projections & Grade Realignment

As part of the LVCS Board of Education's effort to improve educational programs and opportunities for students, the will be implementing a "Right-Sizing" of schools initiative as of the 2017/18 school year which will include grade realignment and facility decommissioning. The current grade configuration at the elementary level will change from:

Kindergarten (single location)

PK/Kindergarten - 5th grade

1st - 5th Grade

The new elementary grade level configuration will begin in 2017/18, and is anticipated to be complete by the 2019/20 school year once the classroom addition at Los Ninos Elementary is completed. The new grades will

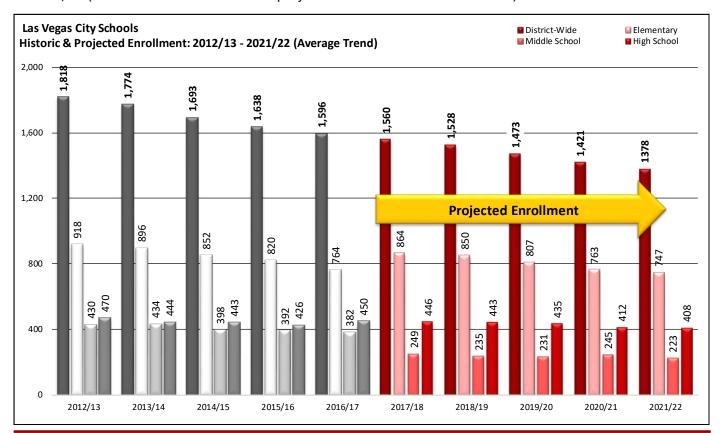

be configured as follows: K-6th Grade (MMES)

1st-3rd (LNES) Kindergarten will be added in 2019/20

4th-6th (SVES)

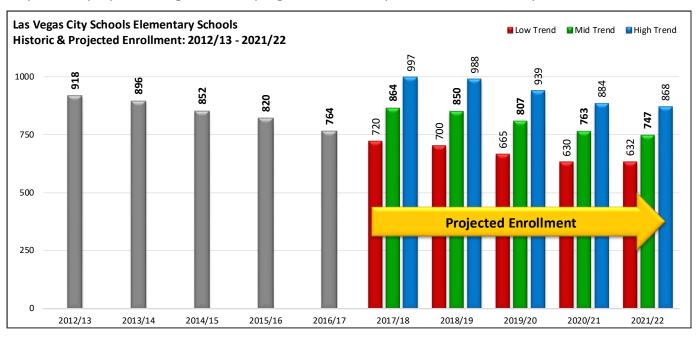

The "Right-Sizing" of schools initiative will also impact the district's middle and high school. As of the 2017/18 or the 2018/19 the school year if 2017 summer work is not completed, a new 7th/8th Grade Academy will be established on the Robertson High School campus and Memorial Middle School will be closed.

The "Right-Sizing" initiative is also a way for LVCS to address the decline in enrollment it has been experiencing in all grade levels for many years, which is also projected to continue slightly decline an additional -2.9% due in part to lower birth rates over the past 5 years. While the district anticipates a potential additional decline in enrollment in 2017/18 as the "Right-Sizing" initiative is implemented, it is expected to be only temporary until parents concerns are eased. The chart below provides the overall projected district enrollment from 2017/18 to 2021/22 (individual school enrollment projections can be found in Section 4).

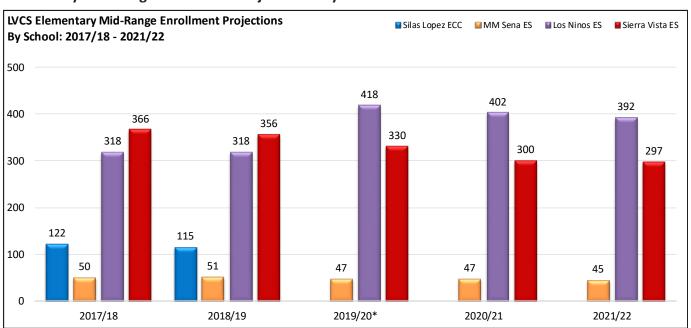

Elementary Enrollment Projections - Pre-K through 6th Grade

Enrollment at the district's elementary schools is projected to continue decline (-3.6% on average annually) over the next five years, due to several years of low birth rates in San Miguel County. If local economic conditions were to improve in Las Vegas, an in-migration of new students may help to reverse this trend. Through the "Right-Sizing" of schools initiative, the addition of 6th grade to the elementary schools will help increase enrollment beginning in 2017/18 to the mid 750's to mid 850 range as can be seen in the chart below, and help ensure proper staffing levels and programs remain in place for all elementary students.

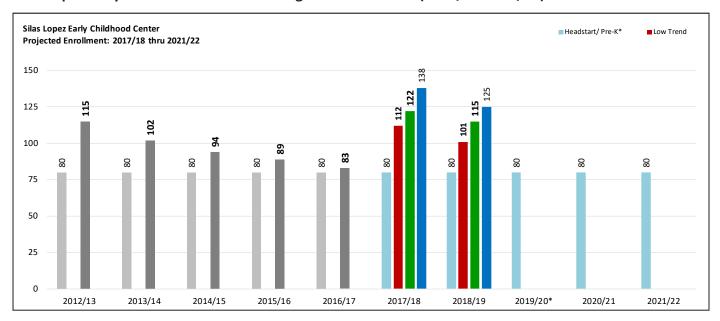

Elementary Mid-Range Enrollment Projections - By School

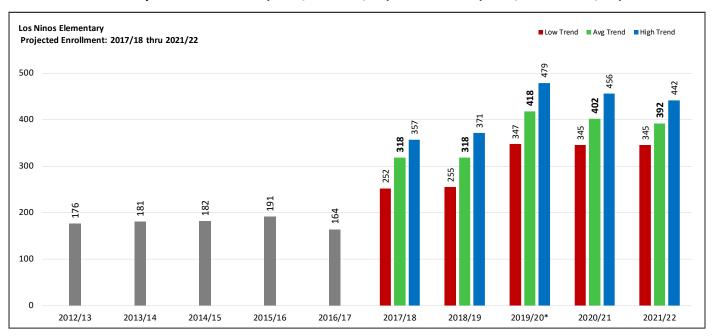

^{*} Note: As of the 2019/20 school year once the classroom addition is completed at Los Ninos Elementary, kindergarten students will be relocated. Silas Lopez ECC will either remain as the district's joint Head Start / Pre-K Facility with WLVS or will be closed.

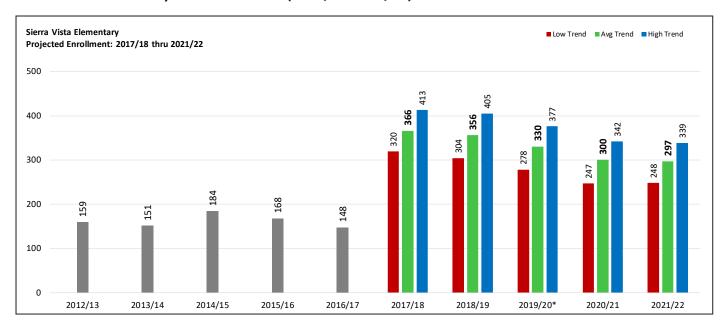

Silas Lopez Early Childhood Center - Kindergarten Enrollment (2017/18-2018/19)

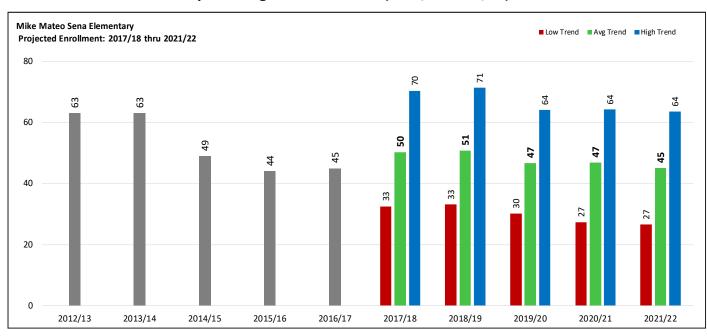

Los Ninos Elementary - 1st - 3rd Grade (2017/18-2018/19) K-3rd Grade (2019/2020 -2021/22)

Sierra Vista Elementary - 4th - 6th Grade (2017/18-2021/22)

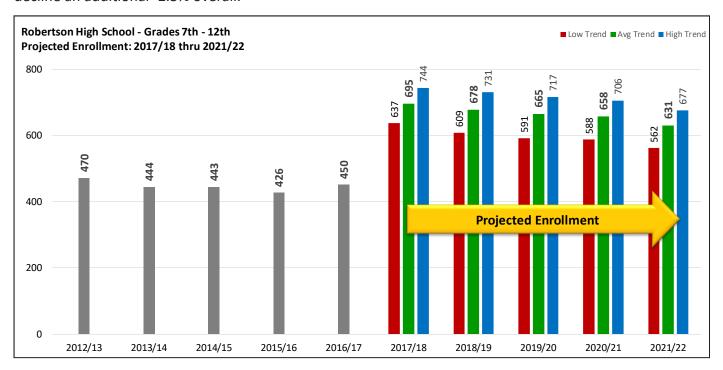

Mike Mateo Sena Elementary - Kindergarten - 6th Grade (2017/18-2021/22)

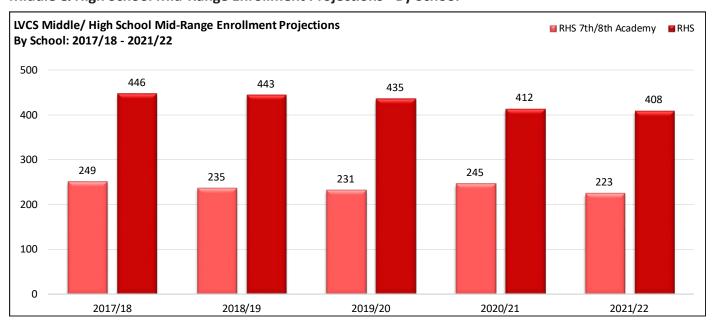

Middle and High School Enrollment Projections - 7th through 12th Grade

Through the "Right-Sizing" of schools initiative, the creation of a 7th and 8th grade Academy at the Robertson High School Campus will reduce middle school enrollment to two-grade levels, however will improve student access to educational resources and new programs at the high school, as well as increase the RHS's overall campus utilization. The district's overall decline in enrollment has been felt in all grade levels for many years and has resulted in smaller cohorts of students moving through the middle and high school grade levels. Over the next five years this trend is expected to continue, and the middle and high school are expected to decline an additional -2.3% overall.

Middle & High School Mid-Range Enrollment Projections - By School

2.5 CAPACITY & UTILIZATION

2.5.1 - Capacity & Utilization

The capacity of a school reflects how many students the school's physical facility can serve effectively. There are various methodologies that exist to calculate capacity. It is not uncommon to review an existing building only to find that the capacity which once had been assigned to a building is greater than what can be reasonably accommodated today. That is primarily due to a change in how programs are delivered today.

During the past sixty years, educational programs in public schools and the manner in which they are delivered have changed significantly. Repeated arguments are heard that "This school was able to accommodate 600 students thirty years ago and now you are saying

it can only accommodate 400 students today. How can this be the case?" Persons making these statements often do not realize that when the building was originally constructed, the average class size was 30 students, the music program was being held on the stage, the teacher provided art on a cart, there were no computer labs, the Kindergarten program went from half day to full day and severely handicapped special education students were in separate facilities and not attending mainstream public schools. Add to this the fact that many states have legislation in place for class sizes of 20 or under for the early elementary grades, schools are expanding Pre-K programs, and there are many more at-risk student programs that require additional space.

A critical component of analysis is how a space is actually used and managed. An analysis of how space is managed in Las Vegas City Schools was accomplished through analysis of the master schedule, floor plans, facility walk-through's, and confirmation of any questions regarding use by building principals.

Capacity can generally be defined in two basic ways:

- Design Capacity is the desired maximum capacity at the time of building design, and assumes the
 maximum number of students per classroom. This formula generally follows either state 'standards'
 or a modification of this standard by the locality.
- Functional Capacity is the capacity of a school as it functions from year to year based on enrollment and programs. For example, in a high growth area, a school may actually have a functional capacity above the design capacity, or if a school has a stagnant or declining population or a large population of students with special needs, a school may have a functional capacity significantly below design capacity. This methodology also takes into account that if for example, a general classroom has been converted to a book room that classroom would not have a capacity assigned to it or vice versa if a book room was converted into a classroom space and also does not meet the minimum NMAS for general classroom, it also would not be counted towards capacity.

In the case of LVCS, the formula used for determining "Functional Capacity" reflects the districts assigned programs and required services associated with those programs at each school, (i.e. Title I and special education) yet has been kept simple for planning purposes. The method for determining "Functional Capacity" is different for elementary, middle and high schools as students remain primarily in their home classroom

at the elementary school level, but travel from class to class of varying sizes at the secondary school level.

The chart on page 49 is an inventory of all available classrooms at each LVCS school, the information was then compared against state adequacy standards and guidelines to determine the capacity of each facility. The chart in Section 2.5.3 (page 53) takes the inventory and capacity a step farther and compares the existing and future enrollment of each school to the available capacity to determine if any additional classrooms are required or if there are opportunities for facility demolition.

NMPSFA Guidelines for Utilization and Capacity

As part of the utilization and capacity analysis the following criteria was established by NMPSFA and was used to identify and categorize the instructional spaces available. A study for all educational facilities (including the Pre-K program) identifies all of the available instructional spaces at each school facility and whether or not the current spaces meet the existing and projected classroom needs. Existing floor plans and space usage charts for each school identifies how the facility is being utilized and can be found in Section 4. From that information, utilization and capacity of each facility was analyzed as it relates to the State's Adequacy Standards.

| | Elementary Level (Grades PK DD thru 5th or 6th) | |
|---|---|-------|
| Space | Notes | Space |
| Regular (Standard) Classroom | Graded, 650 sf, 24 students maximum | U&C |
| Special Ed. Classroom (C & D) | If Std. Or 1/2 CR size - and if for C or D level pull-out | U&C |
| 1/2 Classroom | 450 sf - 12 students maximum | U&C |
| Special Ed Resource Room (A & B, Gifted) | If Std. or 1/2 CR size | U&C |
| Federal/Categorical | Includes ESL, SLP, OT/PT etc count if minimum 1/2 classroom size (175-450 sf) | U&C |
| Program Management Space | If Std. or 1/2 CR size - Parent Room, Hosts, etc. | U |
| Music Room | If Std. CR size - Includes Art, Science Lab - Program Space | NC |
| Computer Lab | Including Title I labs - Program Space; Not counted if in Media Center | NC |
| Lounge, etc. in Classroom Space* | Classified as Non-instruction / non-program Space see (*) to determine inclusion or exclusion | NC |
| Media Center | Not counted | NC |
| Gymnasium | Not counted | NC |
| Multi-purpose Room | Not counted | NC |

| | Middle / High School (6th or 7th thru 12th Grade) | |
|----------------------------------|---|-------|
| Space | Notes | Space |
| Standard Classroom | Graded, 675 sf, 32-35 students maximum | U&C |
| Special Ed. Classroom | If Std. Or 1/2 CR size | U&C |
| 1/2 Classroom | 375-675 sf - 12 students maximum. Do not count seminar rooms | U&C |
| Labs | Science, Business Ed, Foreign Language | U&C |
| Music | Chorus, Band, Orchestra. Do not count rehearsal or ensemble rooms. | U&C |
| Computer Lab | Count all, including "open" lab. Not counted if part of Media Center | U&C |
| Shop/Home Ec. Lab | If separate labs with separate access count each | U&C |
| Shop/Home Ec. Classroom | Only if separate space and separate access | U&C |
| Gymnasium | Count full-size gym as 2. Count usable mezzanines | U&C |
| Wrestling Gym | Or Dance, Gymnastics | U&C |
| Weight Room | Count only if a scheduled class | U&C |
| Auditorium | Only if fixed seating | U&C |
| Lecture Hall | Always count | U&C |
| Program Management Space | If Std. or 1/2 CR size - Tutoring, School to Work, ISS, Detention, etc. | NC |
| Greenhouse | Not counted | NC |
| Media Center | Not counted | NC |
| Multipurpose Room | Not counted - Commons, Lunch Room, Cafeteria, etc. | NC |
| Lounge, etc. in Classroom Space* | Classified as Non-instruction/non-program Space see (*) to determine inclusion or exclusion | NC |
| Federal/Categorical | Includes ESL, SLP, etc count if minimum 1/4 classroom size | NC |

Key:

U&C Counted as part of utilization/capacity analysis.

UCounted for utilization analysis, but not for capacity Analysis.

U&CCounted as part of utilization/capacity analysis if it is a scheduled class.

NC......Not Counted for Utilization/Capacity.

^{*} Administrative and Non Instruction/Programs - Classrooms greater than or equal to 650 SF used by the school for administrative or non-teaching purposes will be counted as having capacity. They include but are not limited to: office, workroom, parent's room, lounge, storage, custodian, maintenance, tutoring, counseling, vending and production. If a school can demonstrate that the administrative or non-teaching function is required at the school, and that no other space is available that can adequately house the function, then the classroom is excluded from capacity.

Utilization Process

The utilization and capacity study identifies all of the available instructional spaces at each school facility and whether or not the current spaces meet the existing and projected classroom needs. Existing floor plans and space usage charts for each school identifies how the facility is currently being utilized and can be found in Section 4. From that information, utilization and capacity of each facility was analyzed as it relates to the State's Adequacy Standards.

Before any analysis can be undertaken, quantities each type of instructional space in each school facility including portables, this information can be found on page 49 in Table 2.5.1. Each grade level is evaluated throughout the school for General-use classrooms, ½ Size classrooms, Special education classrooms and Special-use classrooms. General-use classrooms are classrooms which have no special built-in features and can accommodate various educational classes such as English, Math and Social Studies. ½ Size classrooms are classrooms which are at least 450 square feet and may be used for a variety of educational classes, but are usually intended for special needs instruction. Special-use classrooms have specific attributes that are necessary to accommodate a specific course of study such as science, art or vocational and career education programs. It should be noted that in small rural school districts with a MEM of less 500, that utilization of specialty spaces is often lower due to smaller middle and high school enrollment and some of the teachers have certification to teach more than one subject such as Biology and Ag Mechanics.

The number of required classrooms to adequately accommodate the existing student population was also evaluated in conjunction with how the existing classrooms are currently being used by the school, including special education and federal program classes.

Please refer to Section 2.5.4 for more detail on how post-grade reconfiguration and school closure will impact the district's remaining schools including the need for additional facilities as well as capacity and utilization.

2.5.2 – Special Factors that Influence Facility Use

As a small urban school district with multiple attendance boundaries for its elementary schools and one overall attendance boundary for the middle and high schools, Las Vegas City Schools typically has a lower than average classroom loading per grade level due to its low enrollment similar to other districts with a declining population. While the actual student/teacher ratio varies year to year based on the district's enrollment, the LVCS target student/teacher ratios are in-line with or are lower than NMPED maximums and do not exceed the following:

20:1 Kindergarten

22:1 Grades 1-3

24:1 Grades 4-6

24-27:1 Grades 7-12 (class size varies depending upon subject)

While all of the district's schools have seats available both now and in the future, these seats available do not always directly correlate into a number of classrooms available. For example: if an elementary school were to have 110 seats available, it could be assumed that there were 4-5 classrooms available for use. When a school is determined to be below capacity, class loading becomes a factor. If a school was to have 29 second graders, NMPED states that for second grade class loading should be 22 students max. This would lead the school to split the 29 students into a class of 14 and 15 each and there would be a total 15 "seats available" between the two classes. Now if this were done at each grade level, a school could easily reach 110 seats available but not necessarily have any "classrooms" available. The degree to which this occurs at every school varies and is always dependent on school specific programs, enrollment, and school facilities available, all which need to be reviewed on an annual basis.

2.5.3 – Capacity / Existing & Projected Utilization by School Facility

Utilization Process

The utilization and capacity study also examines all of the available instructional spaces at each school facility and whether or not the current spaces meet the existing and projected classroom needs. Existing floor plans and space usage charts for each school identifies how the facilities are currently being utilized and can be found in Section 4. From that information, utilization and capacity of each facility was analyzed as it relates to the State's Adequacy Standards.

Before any analysis can be undertaken, quantities each type of instructional space in each school facility including all portables spaces were identified in conjunction with their "actual" usage (See Table on page 49). Each grade level is evaluated throughout the school for General-use classrooms, ½ Size classrooms, Special education classrooms and Special-use classrooms. General-use classrooms are classrooms which have no special built-in features and can accommodate various educational classes such as English, Math and Social Studies. ½ Size classrooms are classrooms which are at least 450 square feet and may be used for a variety of educational classes, but are usually intended for special needs instruction. Special-use classrooms have specific attributes that are necessary to accommodate a specific course of study such as science, art or vocational and career education programs.

The number of required classrooms to adequately accommodate the existing student population was also evaluated in conjunction with how the existing classrooms are currently being used by the school, including special education and federal program requirements such as Title 1.

Each school was analyzed according to the information provided by the district in regards to each schools programs and usage. Then each school's capacity and utilization of instructional spaces was then calculated to identify potential existing and projected (surplus / deficit) instructional spaces according to NMPSFA guidelines. The chart on the following page identifies the current classrooms, current

and projected enrollment as well and the utilization for each school in the district.

Elementary School Utilization / Classroom Needs

Analysis of the district's elementary schools indicates that there is significant underutilization at each school site due to low enrollment. With the implementation of the LVCS "Right-Sizing" initiative as of the 2017/18 school year, two of the district's schools will be immediately decommissioned and in 2019/20 the Silas Lopez Early Childhood Center will be either re-purposed into an expanded Head Start/ Pre-K program or decommissioned. Classroom supply at the remaining schools projected to meet or be slightly below demand by 2021/22 and utilization is expected to be at or near 95%, with the exception of Los Ninos Elementary which will need a 4.5 classroom addition.

Middle School Utilization / Classroom Needs

Even with the advancement of the district's elementary cohort population into the middle school grades over the past five years, Memorial Middle School is currently only at half of its capacity. As of the 2017/18 school year, the main building at the middle school will be decommissioned and all 7th and 8th grade students will be relocated to the 7th/8th Grade Academy at Robertson High School. Only the middle school gym will remain in operation for athletics until a new auxiliary gym can be constructed in the future on the RHS campus.

High School Utilization / Classroom Needs

Currently the high school is also at only half capacity and only 45% utilized. As of the 2017/18 school year, the creation of the 7th/8th grade Academy on the RHS campus will increase enrollment by an additional 249 students and two of the buildings on the campus have been identified for demolition the summer of 2017. Between the increase in enrollment and demolition of unneeded facilities, overall campus utilization is expected to increase to nearly 82%.

| SCHOOL HOURS | M-F | |
|---------------------------------|---------|--|
| School Start Time: | 8:00 AM | |
| School End Time: | 2:30 PM | |
| Total Hours in School Day | 6:30 | |
| Number of School Days per Week: | 5 | |
| Number of Lunch Turns Per Day: | 2 | |

Count general classrooms as being used while students are attending recess, lunch, library time, and PE activities. If a classroom is being used in another way (i.e. teacher's lounge, OT/PT office/room), identify its use on the sheet under "Existing Classroom" column and record its intended or original use under the "Originally Intended" column.

Utilization Rate Calculation: Total number of hours classroom is actually used per week / (divide by) the maximum possible classroom hours per week = (equals) total classroom utilization.

| * Minimum Square Footage Per Adequacy Standards x Max class size per PED | | | | | | | | |
|--|--|--|--|--|--|--|--|--|
| Kindergarten | 50nsf per student x 20 students max = 1,000 SF | | | | | | | |
| Grades 1 - 3 | 32nsf per student x 22 students max = 704 SF | | | | | | | |
| Grades 4 - 5 | 32nsf per student x 24 students max = 768 SF | | | | | | | |
| Grade 6 | 28nsf per student x 24 students max = 672 SF | | | | | | | |

| Fully utilized and well occupied | |
|--|--|
| Inderutilized or poorly occupied, defined as the room's occupancy rate being below 50% based upon the PED PRT standards | |
| Vacant | |
| Scheduled as needed (i.e. computer labs, group work space, commons areas) | |

NOTES:

1-Max. Number of Students per Adequacy Standards Sq. Ft.: The maximum number of students allowed per the Statewide Adequacy Standards square feet.

2-PED Max. PTR per Classroom: PED's maximum pupil/teacher ratio per classroom

3-Utilization Rate Calculation: Total number of hours classroom is actually used per week / (divided by) the maximum possible classroom hours per week = (equals) total classroom utilization.

^{**} The West Las Vegas Headstart/ Pre-K program is a joint program with LVCS, Pre-K enrollment is not counted in the district's "Official" enrollment but with WLVS. Only LVCS Pre-K DD students are included in the schools "official" enrollment.

| SCHOOL HOURS | M-F |
|---------------------------------|---------|
| School Start Time: | 8:00 AM |
| School End Time: | 2:40 PM |
| Total Hours in School Day | 6.7 |
| Number of School Days per Week: | 5 |
| Number of Lunch Turns Per Day: | 1 |

NOTES

Count general classrooms as being used while students are attending recess, lunch, library time, and PE activities. If a classroom is being used in another way (i.e. teacher's lounge, OT/PT office/room), identify its use on the sheet under "Existing Classroom" column and record its intended or original use under the "Originally Intended" column.

Utilization Rate Calculation: Total number of hours classroom is actually used per week / (divided by) the maximum possible classroom hours per week = (equals) total classroom utilization.

| * Minimum Square Footage Per Adequacy Standards x Max class size per PED | | | | | | | |
|--|--|--|--|--|--|--|--|
| Kindergarten | 50nsf per student x 20 students max = 1,000 SF | | | | | | |
| Grades 1 - 3 | 32nsf per student x 22 students max = 704 SF | | | | | | |
| Grades 4 - 5 | 32nsf per student x 24 students max = 768 SF | | | | | | |
| Grade 6 | 28nsf per student x 24 students max = 672 SF | | | | | | |

| Fully utilized and well occupied | |
|---|--|
| Underutilized or poorly occupied, defined as the room's occupancy rate | |
| being below 50% based upon the PED PRT standards | |
| Vacant | |
| Scheduled as needed (i.e. computer labs, group work space, commons areas) | |

NOTES

1-Max. Number of Students per Adequacy Standards Sq. Ft.: The maximum number of students allowed per the Statewide Adequacy Standards square feet.

2-PED Max. PTR per Classroom: PED's maximum pupil/teacher ratio per classroom

3-Utilization Rate Calculation: Total number of hours classroom is actually used per week / (divided by) the maximum possible classroom hours per week = (equals) total classroom utilization.

2-PED Max. PTR per Classroom: PED's maximum pupil/teacher ratio per classroom

3-Utilization Rate Calculation: Total number of hours classroom is actually used per week / (divided by) the maximum possible classroom hours per week = (equals) total classroom utilization.

| GRADE LEVEL | CURRENT STUDENT 40th DAY COUNT | DD/SPECIAL NEEDS STUDENTS PER GRADE | CURRENT NUMBER OF TEACHERS | NUMBER OF CLASSRMS |
|-------------|--------------------------------------|--|----------------------------------|-----------------------|
| Pre-K | | | | |
| К | | | | |
| 1st | 29 | 4 | 2 | 2 |
| 2nd | 25 | 1 | 1 | 1 |
| 3rd | 39 | 5 | 2 | 2 |
| 4th | 21 | 1 | 1 | 1 |
| 5th | 32 | 3 | 1 | 1 |
| TOTALS | 146 | 14 | 7 | 7 |

| SCHOOL HOURS | M-F |
|---------------------------------|---------|
| School Start Time: | 8:00 AM |
| School End Time: | 2:40 PM |
| Total Hours in School Day | 6.7 |
| Number of School Days per Week: | 5 |
| Number of Lunch Turns Per Day: | 1 |

NOTES:

Count general classrooms as being used while students are attending recess, lunch, library time, and PE activities. If a classroom is being used in another way (i.e. teacher's lounge, OT/PT office/room), identify its use on the sheet under "Existing Classroom" column and record its intended or original use under the "Originally Intended" column.

Utilization Rate Calculation: Total number of hours classroom is actually used per week / (divided by) the maximum possible classroom hours per week = (equals) total classroom utilization.

2.5.4 Strategies Considered to Meet Required Needs at each School

Enrollment at Las Vegas City Schools has declined 23.3% over the past ten years from 2,077 students to 1,596. The district has several elementary schools operating at half capacity with enrollment in the low to mid 100's, and both the middle and high school are between 15-30% of their former enrollments ten years ago and are also at half capacity. With over \$82M in Capital Improvement Needs identified just for the district's school facilities as well as the major structural repairs needed at Paul D. Henry Elementary, an opportunity was created for the LVCS Administration and Board of Education to discuss needed changes within the district.

The discussion centered on how to best improve the educational environment, opportunities, programs and equity for all students

within the district. By being able to address these core areas first, the identification of the facilities best able to accommodate the changing needs of the district without the need for major additions or construction of a new school was completed. The LVCS Board of Education approved the implementation of a "Right-Sizing" of schools initiative as of the 2017/18 school year which will include grade realignment and facility decommissioning. The following grade realignments and facility retention has been identified as follows:

- Silas Lopez Early Childhood Center (SLECC): Will continue to serve traditional Kindergarten students until 2019/20 when a new classroom addition is completed at Los Ninos Elementary School. SLECC will also become the new location for the WLVS Head Start/ Pre-K Program.
- Los Ninos Elementary: Will serve grades 1st-3rd grade as of the 2017/18 school year and will add traditional Kindergarten students as of the 2019/20 school year once the new classroom addition is completed. The school currently has a "Dual Language" program in place that will remain for parents wishing to have their students participate including two kindergarten classes, and a traditional elementary program will serve the remaining students.
- Sierra Vista Elementary: Will serve grades 4th-6th grade as of the 2017/18 school year. The "Dual Language" program in place at Los Ninos will expand to 6th grade for parents wishing to have their students participate, and a elementary program will serve the remaining students.
- Robertson High School: Will serve grades 7th-12th grade as of the 2017/18 or 2018/19 school year. A new 7th/8th grade Academy will be established on the high school campus, and will operate independently on it's own bell schedule separate from the high school, however it will share campus resources improving overall campus utilization.

2.5.5 Under Utilized Spaces or Facilities to be Demolished

All of the district's schools are currently underutilized and with the implementation of the district's "Right-Sizing" initiative, utilization of the remaining school facilities will be significantly increased within the target ranges of each school type. While all facilities that will remain need major renovation and facility improvements, only one school will require a small 4.5 classroom addition (Los Ninos Elementary) to accommodate the "Right-Sizing" initiative. The facilities identified for closure as of 2017/18 and future demolition are: Paul D. Henry Elementary, Legion Park Elementary, Memorial Middle School. Once the classroom addition is completed at Los Ninos Elementary and the remainder of the Kindergarten program relocated, Silas Lopez Early Childhood Center will be either re-purposed for expansion of the Head Start/ Pre-K program or closed and the property sold "as-is".

2.6 Technology

2.6.1 – Strategies for improving academic achievement and teacher effectiveness

Las Vegas City Schools believes all students can learn and that learning and leadership is a partnership between administration, faculty, student, parents, and the community. By respecting the diversities and cultures LVCS supports its families and society creating unity within the community. Decisions on education are based on student centered data comparing students with standards in a systematic, fair, equitable, and valuable way.

TECHNOLOGY MISSION STATEMENT

To empower our stakeholders to be globally prepared in a technology driven society while providing and maintaining a robust, reliable, and secure infrastructure that will enhance learning, support instruction, and assist administration.

VISION STATEMENT

Technology such as computers, local area networks, and wide area communications offer tremendous opportunities to link the district to the outside world; as such, students, parents, and educators will use information technologies and communication to enhance and expand the traditional role of education in the Las Vegas City School District. While Technology Plans are no longer required by NMPED to receive E-rate funding, Las Vegas City Schools has internally identified the following Technology Goals and Needs:

We believe the basic goal of education has not changed; rather the tools and instructional methods to achieve these goals have advanced dramatically.

We will:

- Facilitate a communication bridge between school, community and district;
- Assist with relevant technology training and support;
- Provide and maintain equipment, software, and upgrades when fiscally possible; and
- Encourage and promote digital citizenship and skills.

All software resources purchased will have a definitive link to the district EPSS plan and state standards and benchmarks. Currently our EPSS has two main goals. Students will become proficient in reading and language arts and Students will become proficient in mathematics.

To meet these goals, LVCS has spent budgeted funds toward software and online resources to promote reading, writing and math skills. Through the creation of two computer labs at the high school, and labs at each of the middle and elementary school, as well as classroom computers, iPads and teacher laptops, students and teachers have access to a wide variety of software resources that focus on reading, writing and math.

LVCS is working hard to move from a district where teachers are focusing on just learning the computer and applications to using the computer as a communication tool, a curriculum tool, and a data analysis tool. Ongoing training is available to teachers in specific areas such as applications, data-based decision making, and communication tools.

LVCS has currently determined that robust connectivity and speed is to be designated a priority. As part of the district's "Right-Sizing Plan" LVCS will be working to install fiber optics at the remaining four school. Fiber connectivity is the desired format for all campuses and LVCS is currently working with the NMPSFA Broadband Deficiencies Program to help fund upgrades to each of the school sites over the next year to accomplish this goal as soon as possible. Additionally, the district remains committed to providing improvements in hardware and software when funding is available. LVCS technology personnel and committee members will continue to implement a replacement schedule for outdated

hardware and software and continue to look for ways to expand the catalogue of technology tools available to students and staff for continued educational excellence.

Funding sources in future years will include operational funds, state technology funds, technology grants, mil money, bond money, and Title funds, as well as E-Rate funding. The chart below lists specific strategies within the Technology Plan and expected sources of funding for those strategies. If strategies do not require specific funding, they are not included in the chart.

Technology Budget 2017- 2022

| Technology & Equipment Needs | Anticipated Funding Source | Budget 2016-2020 |
|--|---|--|
| Upgrade fiber to all buildings at all remaining schools and administrative offices. | State Technology, PSCOC BDP Program, | \$117,000 |
| E-rate, District GO Bond | \$ 700,000 first year, then \$100,000 each year after | \$40,000 |
| Provide standardized interactive technology for each k-6 classroom in the district. This will begin the implementation of touch screen flat-screen television. | State Technology, GO Bond, Operational, SB-9 | \$ 100,000 |
| Migration to google e-mail for faculty and staff to lead to the implementation of Google Classroom. | None | \$ 0 |
| Replace telephone system and services with a centralized system for easier management, better communications, and reduced annual cost. | Operational, SB-9, GO Bond | \$ 300,000 first year, then \$15,000 annually. |

2.7 Energy Management Program

2.7.1 – District Wide Energy Management Program

The mission of the Las Vegas City Schools Energy Management Program is to help improve energy efficiency in— all district facilities and reduce district-wide energy costs by 10% with a long range goal of 20% within 5-7 years. Such effort will save nonrenewable resources and operational funds while maintaining a quality learning environment for students and personnel.

The district's success in achieving an effective energy use, conservation and efficiency program requires and depends upon cooperation at all levels. Therefore, every employee, student, and school volunteer and contractor is expected

to contribute to and actively participate in the District's energy conservation and management program, and to be an "energy saver" as well as an "energy consumer."

The purpose of these guidelines is to provide Las Vegas City Schools with the necessary short and long range guidelines to implement energy awareness and conservation in order to better utilize available operational funds for improving student achievement. These guidelines are not intended to be all-inclusive and may be modified for specific conditions or events.

A. Occupied Mode and Unoccupied Mode

Building occupied hours will begin Monday – Friday at 7:00 a.m. and unoccupied hours will begin at 4:30 p.m. Exceptions will be made for the kitchen, school administration office areas and the high/middle school gym (when scheduled), or for zero hour classes at the high school.

Sections of each building used for after-school activities will be considered occupied. It should be noted that an entire school is not occupied when an activity is occurring in only one portion of the building. The space that is being used will be heated or cooled accordingly. Small group activities will not be scheduled in large areas such as the auditorium, gymnasiums, or multi-purpose rooms. Use of such areas will be coordinated with the custodial and maintenance staff to allow reduced lighting, heating and cooling during periods of non-use.

School administration or the head custodian should immediately report any malfunctioning devices, windows/doors, or vents to the maintenance department through the LVCS work order system.

B. Heating Systems

- Thermostats shall be set to obtain a building temperature of no warmer than 72 degrees Fahrenheit
 during the school day, in accordance with the American Society of Heating, Refrigeration and Air
 Conditioning Engineers standard 55, "Thermal Conditions for Human Occupancy". Use of "hold"
 feature on programmable thermostats is not permitted.
- 2. Heating setbacks shall be adjusted to obtain a minimum unoccupied building temperature of 60 degrees Fahrenheit.

- 3. Door and window closures shall be carefully monitored to reduce heat-loss.
- 4. The maintenance department shall assess outside air intake systems of the roof top HVAC equipment and adjust where needed to reduce heat loss.
- 5. Heating problems should be reported to the maintenance department through the work order system.
- 6. Personnel will not obstruct unit ventilators, ventilation ducts or return air grills with books, charts, furniture, plants, etc.
- 7. Portable space heaters of any kind are banned from use within ALL District facilities as a matter of safety, except where provided by the Maintenance Department.

C. Cooling Systems

- 1. Thermostats shall be set to obtain a building temperature of no cooler than 72 degrees Fahrenheit during the school day, in accordance with the American Society of Heating, Refrigeration and Air Conditioning Engineers standard 55, "Thermal Conditions for Human Occupancy". Use of "hold" feature on programmable thermostats is not permitted.
- 2. Cooling setbacks shall be adjusted to obtain a maximum unoccupied building temperature of 80 degrees Fahrenheit.
- 3. The maintenance department shall adjust cooling system controls to ensure that the temperature of air-conditioned areas is maintained appropriately.
- 4. Cooling and air circulation problems should be reported to the maintenance department through the work order system.

- 1. Summer break shall begin on the first day after the final teacher contract day and shall end on the first day of the teacher contract.
- 2. During summer break all HVAC systems will be placed in summer setback with the exception of the main office areas where they will remain on for the office staff.
- 3. Use of HVAC systems should be discouraged and limited to only what is absolutely necessary, no thermostat should be set to obtain temperature below 72 degrees Fahrenheit at any time and the "hold" feature on programmable thermostats shall not be used.
- 4. Any professional development classes or meetings should be scheduled to take place in a building where summer cooling is required so no unnecessary electrical load is placed on a building during the hottest months of the year. All attempts shall be made to utilize classrooms in the same scheduling area so as to reduce the number of HVAC systems being operated during the hottest time of year.
- 5. A calendar of summer events taking place in each building should be submitted to Maintenance and the Superintendent prior to the beginning of summer so they may be scheduled accordingly.
- 6. Gymnasium lights will remain off unless the gymnasium is being used or worked in.
- 7. Teachers shall ensure that all electrical devices in the classroom are unplugged prior to leaving for summer break.

E. Lighting

Interior lighting shall be converted to LED whenever possible. New energy-saving fixtures, lamps and ballasts will be used to replace existing less efficient lighting whenever economically feasible and appropriate.

- During work hours, all lighting will be turned off in any area that is unoccupied with certain exceptions. These exceptions include corridors, exits required by code, and in areas with slow-start lighting. Slow start lighting areas should be turned off if area is to be unused for four hours or more.
- 2. After normal work hours, all lighting will be turned off in unoccupied areas.
- 4. Lights in mechanical, electric, custodial, storage and other service rooms are to be turned on only while someone is occupying the room.
- 5. Classroom lights are to be turned on by the user, not in advance by the custodian.
- 6. If daylight in a room eliminates the need for lights, the lights should be turned off.
- 7. All classroom and office lights are to be turned off during breaks, at lunchtime, and for any period of time when the space is not occupied.
- 8. Under no circumstances will decorative lighting be permitted without special permission from the Principal/ Superintendent.
- 9. Only exterior lighting that provides illumination for safe entry into the building or access to parking lots will be permitted, and only during hours required for activities. Perimeter lighting will remain on from dusk to dawn.

F. Water

- All staff will coordinate with the maintenance department to ensure all plumbing and/or intrusion leaks are reported and repaired using the LVCS work order system.
- 2. When spraying or irrigating, ensure the water does not directly hit the building or sidewalks.
- 3. Domestic hot water systems shall not be set any higher than 105 degrees Fahrenheit or 140 degrees for cafeteria service with dishwasher boosters.

Note: All future renovation projects to install low-flow plumbing fixtures in all restrooms and locker rooms with auto-sensor controlled flush valves and faucets to reduce water usage.

G. Other

- 1. Refrigerators and/or similar appliances shall be limited in their use to certain designated areas as determined by the Principal or Superintendent.
- 2. Electric air deodorizers are not authorized in the classrooms or buildings.
- 3. Teachers and staff will be responsible for shutting down computers at the end of the work day.
- 4. All computers shall have the power options set to turn monitors off after 20 minutes of inactivity. Printers shall be manually turned off at the end of each day or during long periods of inactivity.
- 6. Copy machines will have power options set to automatically shut down after 4 hours of inactivity.
- 7. Where power options are not available, staff will be responsible for shutting equipment off at the end of the work day.

H. Additional Equipment

Refrigerators, microwaves, and other small appliances will be limited to the kitchen and teacher's lounge. Personal appliances will not be allowed in the classroom unless an academic need can be substantiated.

I. Classroom Instruction

Each school will incorporate various energy conservation lessons at the appropriate grade level. Sources of instruction include information from websites such as www.wattwatchers.org, energy star for kids www.wattwatchers.org, and other sources.

2.8 Capital Funding

2.8.1 - Capital Funding History

The Las Vegas City Schools has experienced a successful history of local support for past GO Bond and mill levy (SB-9) elections and expects this trend to continue to do so in the future. The most recent general obligation bond (GOB) election was successfully passed in February 2017 and generated \$11M for capital improvement and district-wide technology projects. The district's next GO Bond election will be held in February 2021.

LVCS has had an active capital improvement program throughout the years, and since the mid 1980's the district has planned and constructed new facilities where possible, classroom additions and funded facility upgrades at all district school buildings. These projects have been fully funded by the district over time from the passage of several GO Bonds, previous legislative appropriation (prior to the establishment of NMPSFA/PSCOC) and PSCOC matching funding during the early to mid 2000's for district-wide facility improvements and upgrades such as fire alarm upgrades. Prior to the 2017 GO Bond election, the district's last GO Bond election was last held in 2013 and generated \$6M that the district has used for facility improvements and technology upgrades district-wide.

Based on the current NMPSFA draft rankings for 2017/18, five of the districts eight schools are in the top 100 and one is ranked currently at 33 - Los Ninos Elementary. Keeping in mind the current state of the State of New Mexico's finances, it is anticipated that the district would be eligible to apply for either PSCOC Standards or Systems based funding over the next 5 years to improve facilities. LVCS intends to utilize the funds from the 2017 GO Bond to address facility needs where possible while combining those funds with any available monies from the PSCOC, and will also consider alternative funding sources if financially viable such as Clean Energy Revenue Bonds, Safe Routes to Schools or any County Road or NMDOT funds.

Currently, Las Vegas City Schools has a 2-mill levy in place under the SB-9 program that was also passed in February 2017, with the next SB-9 election set for February 2023. The SB-9 Mill Levy generates approximately \$574,764 per year over the six year period and includes State of NM matching SB-9 funds. The district utilizes the SB-9 monies for general systems maintenance, training, maintenance equipment, cyclical systems replacement and facility renewal.

2.8.2 – District's Current and Future Financial Sources

Information provided by RBC Capital Markets, Inc., indicates that the district will be able to generate \$11M from local sources as part of the recently passed GO Bond in February 2017, and another GO Bond again in February 2021, without a tax increase for the community based on current property assessed valuations by San Miguel County for the district. The current 2016 assessed property valuation for the district is \$271,367,987 which is a 2.28% increase over the previous year, this amount is subject to revision based on future property values.

The district is currently bonded to 80.7% of its available capacity of \$16,282,079 as of February 2017. With the passage of the current \$11M GO Bond the district expects to sell between \$2.5-\$3M in bonds annually to have enough cash flow to fund the needed capital improvement projects in the district as well as have the needed district share available for any PSCOC funded projects.

The district is currently on an aggressive pay down schedule for its debt service of outstanding bonds and if the Board of Education pursues a February 2021 GO Bond election it could generate an additional \$8-11M without a tax increase.

The district currently has an SB-9 2-mill levy in place that was also passed in February 2017. The SB-9 program is on a six-year cycle with the next election in 2023, and generates approximately \$575K per year which includes the State of NM match of approximately \$44K per year.

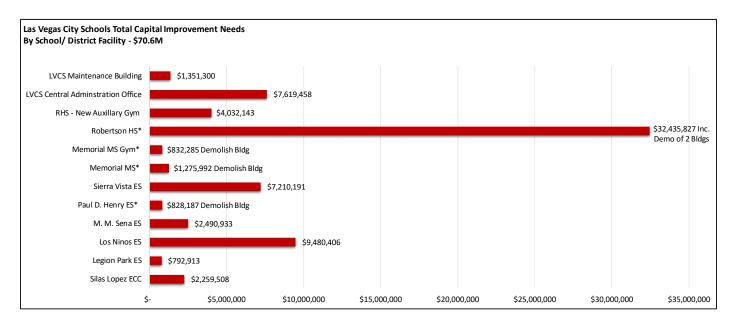

The district does not utilize the HB33 mill levy program at this time, however may consider the use at a future time. The district also does not receive funding under the Federal Impact Aid program (formerly known as PL 874/PL 815 funding).

The district is eligible for PSCOC/NMPSFA awards based on a 58% State of NM and 42% local contribution for approved projects (2016-17) and currently does have an off-set balance in the amount of \$611,538 from a past direct legislative appropriation.

The district's financial advisor is RBC Financial Services, Albuquerque, New Mexico. Contact Paul Cassidy 505-872-5993 for additional information.

2.8.3 – Estimated Costs and Resources to Address Capital Improvement Needs

The chart below identifies the district's overall Capital Improvement Needs of approximately \$70.6M for all of the district's facilities. Based on the limited bonding capacity of \$8-11M available to the district at any given bonding cycle, the district will need to seek PSCOC funding assistance for eligible projects, as well as complete needed district wide projects that range from technology and security upgrades, athletic fields, hazardous material abatement and capital needs at non-educational facilities. Section 3.2 and 3.3 describes the district's possible financial strategies to complete the needed facility improvements.

2.8.4 – Maintenance Projects

The listing below identifies the needed maintenance repairs at *ALL* school district facilities and was reviewed with the LVCS Superintendent and Facility Manager on September 29, 2016. All of the needs identified as part of the facility assessment process, have been uploaded into the district's work order system for completion. The district has an annual budget of \$2.79M to address its facility needs (SB-9 & Operational Funds), including those facilities that are not used for educational purposes and for training of personnel. The District's Preventative Maintenance Plan was *Approved by the LVCS Board of Education on February 16, 2017*.

| School Facility / Building | Maintenance Work | Facility Deficiencies C Noods |

| LVCS Central Administration Office | Х | Roof Maintenance: Clean and remove all roof debris and unclog all roof drains. | | | | | |

3.1 Total Capital Improvement Needs

3.1.1 - Capital Improvement Plan Goals

A successful long range capital improvement plan represents a balance between providing for enrollment growth or decline, additions and renovations of older buildings, constructing new or replacement schools, maintaining the existing infrastructure, and providing all of these through a fiscally prudent Capital Improvement Plan.

"Right Sizing" of LVCS' schools through grade realignment will promote and allow for improvement of the educational environment for <u>ALL LVCS</u> students by providing equity through access to needed support services, programs, and better use of district resources for the benefit of the whole community.

The LVCS Capital Improvement Plan focuses on the following goals and strategies:

- 1) Renovate and improve existing campus's and facilities that will remain post implementation of the LVCS "Right-Sizing" initiative on a systematic schedule to provide safe, up-to-date learning environments that meet the changing educational program needs of the District.
- 2) Provide funding for maintenance and system renovation or replacement on a schedule that ensures that all district buildings remain environmentally safe and function efficiently by utilizing SB-9 where possible.
- 3) Develop a long-range facilities plan that is fiscally responsible and builds upon the changing needs of the District and local community to improve educational opportunities for all students.
- 4) Provide for the ancillary facilities that are needed to support the educational programs and other non-education needs of the District.
- 5) Decommission, Demolish and/or dispose of unneeded district facilities to reduce square footage and reduce operation an maintenance costs as the District's "Right-Sizing" initiative is implemented.

These goals are the foundation of the Las Vegas City Schools District-Wide Facilities Master Plan and are the key to a systematic, consistent process for addressing the long-range facilities needs of the entire school district. They are comprised of a balanced plan to upgrade/renovate older facilities, construct new classroom additions and to efficiently care for the District's overall facility infrastructure including non-educational use buildings. Ultimately, the recommendations contained in the capital plan support a focus on instructional programs and improved usage of the facilities that will remain as the cornerstone of facility planning and design.

Goal 1:

Renovate and improve existing campus facilities that have identified to remain post implementation of the LVCS "Right-Sizing" initiative on a systematic schedule to provide safe, up-to-date learning environments that meet the changing educational program needs of the District.

The Public Schools Facility Authority requires as part of the Facility Master Plan process that school districts identify schools that do not meet the NM Adequacy Standards and identify specific facility needs as part of the District's Capital Improvement Plan. The identified projects are intended to ensure equitable educational environments across the district and state. Oversight by NMPSFA is unique to the State of New Mexico and is in place to assist districts if they so choose to obtain matching funding for capital needs based upon a formal Facility Condition Index (FCI) ranking system that is used to maintain equity and balance in the Capital Outlay

Program across the state. As of 2016/17, Las Vegas City Schools would receive 58% of matching funds from the PSCOC for eligible school projects and LVCS would fund district specific facility projects at 100%.

As of the 2017/18 Preliminary Rankings (Feb 2017), Las Vegas City Schools has five schools ranked in the top 100: Los Ninos Elementary (33 - NMCI 35.04%), Paul D Henry Elementary (51 - NMCI 31.80%), Robertson High School (60 - NMCI 30.92%), Sierra Vista Elementary (62 - NMCI 30.87%) and Mike Mateo Sena (86 - NMCI 28.77%) that would be eligible for either Standards or Systems based funding over the next 5 years. Based upon additional information submitted to NMPSFA in regards to several facilities having significant structural stabilization needs and other facility concerns that the NMCI scores at several of the districts facilities will increase (worsen). The district currently has GO Bond monies available and will consider submitting applications for either Standards or Systems Based funding for Los Ninos Elementary, Paul D. Henry Elementary, Sierra Vista Elementary and possibly Robertson High School over the course of the next 5 years as LVCS implements it's "Right-Sizing" initiative.

Goal 2:

Provide funding for preventative maintenance and system renewal on a schedule that ensures that buildings remain environmentally safe and function efficiently by utilizing SB-9 funds where possible.

A fully funded maintenance plan is part of a 'life-cycle' approach to maintaining a healthy, safe, and comfortable building infrastructure. A comprehensive maintenance plan should include consistent, identifiable funding of the district's maintenance program so as not to underestimate the future fiscal needs of the district and takes into account the upcoming facility changes within the district. Las Vegas City Schools has a Preventative Maintenance Plan (PMP) in place that was approved by the LVCS Board of Education on February 16, 2017, and utilizes the "school dude" program tools to track facility maintenance needs, work orders and utilities. Each school campus has facility needs that have been identified as part of the facility condition assessment process that have been identified as maintenance work and will have work orders issued and completed over the next couple years as funds are available through SB-9 and may need to be supplemented by GO Bond and/ or operational funds.

Goal 3:

Develop a long-range capital improvement plan that is fiscally responsible and builds upon the changing needs of the District and local community to improve educational opportunities for all students.

This capital plan lists nearly \$70.6 Million in needed Capital Improvement Projects for all of its school and district support facilities (non-educational). Many of these projects are needed to address facility renovation/building system replacement needs, including new construction and a classroom addition at Los Ninos Elementary, and includes demolition of several unneeded facilities as funds allow. The LVCS Board of Education Administration, Facility Manager, and Facilities Committee through multiple meetings have reviewed the District-wide Capital Improvement Needs in conjunction with the decreasing enrollment patterns and poor use/utilization of all schools. Once the LVCS Board of Education approved the "Right-Sizing" initiative that includes grade re-alignment and facility decommission which is to be implemented over the next two years, priorities were established to address the facilities needs at the remaining schools with the renovation and classroom addition to Los Ninos Elementary being the district's highest priority, followed by Sierra Vista Elementary. It should be noted that the current LVCS GO Bond is NOT sufficient to cover all of the district's facility needs on its own and the district will need funding assistance through PSCOC Standards or Systems based awards, as well as from future GO bond cycles or funding alternative sources.

General Obligation Bonds - Represents an alternative financing mechanism for the District in addition to SB-9 and HB-33 monies. General obligation bonds require voter approval and often carry lower interest rates than other debt financing mechanisms. Issuance of a general obligation bond requires adequate debt capacity backed by a predictable revenue stream such as property taxes. LVCS recently passed a \$11M GO Bond in February 2017. The District will seek another GO Bond Election in 2021 for an additional \$8-11M depending on the current assessed property valuation and the amount of existing debt service remaining at that time. With the passage of the most recent GO Bond, the district is currently bonded to 80.7% of capacity.

SB-9 Monies - The District currently levies a 2.0 mill levy under the SB-9 Program and receives approximately \$575K annually including matching monies from the State of New Mexico. The district currently uses this funding for general systems maintenance, training, materials and equipment, code compliance and cyclical systems replacement and renewal. The District successfully passed a SB-9 Election in February 2017 and the next SB-9 Election will be in 2023.

HB-33 Monies - The District currently <u>Does Not</u> have a HB-33 mill levy in place as there is no community support for additional taxes, however may need to be considered in the future to generate additional revenue for facility improvements. The HB-33 Program has a maximum 10 mill levy limit and the District has no future plans to pursue this funding source.

Goal 4:

Provide for the ancillary facilities that are needed to support the educational programs and other non-education needs of the District.

General Strategies:

- Provide for adequate parking facilities for transportation vehicles throughout the district.
- Provide for maintenance and facility renewal at all district sports facilities not covered by PSCOC funding.
- Provide for both maintenance and facility renewal at all non-educational district facilities, such as the District's Central Administration Office and Maintenance Complex.

Goal 5:

Decommission, Demolish and/or dispose of unneeded district facilities to reduce square footage and reduce operation an maintenance costs as the District's "Right-Sizing" initiative is implemented. (Estimated SF savings 173,399 - 191,242)

As part of the "Right-Sizing" initiative that once completely implemented over the next two years will not only improve educational opportunities for all students it will allow for improved utilization of the remaining schools and help reduce operation and maintenance costs district-wide, thus allowing more investment into educational programs. The facilities that have been identified for decommissioning/ demolition and/or sale over the next 5 years are:

- Legion Park Elementary (31,733 SF)
- Paul D Henry Elementary (30,442 SF)
- RHS Chorus Building (2,989 SF)
- RHS Quintana Building (8,788 SF)

- Memorial MS Main Building (72,637 SF)
- Memorial MS Gym (26,810 SF)*
- Silas Lopez Early Childhood Center (18,025 SF)**

<u>Note:</u> *Memorial MS Gym will need to stay in operation until a new Auxiliary Gym can be constructed at RHS and then may be considered for demolition in the future if not needed.

** Once the classroom addition is completed at Los Ninos Elementary and the kindergarten students are relocated, the district may consider re-purposing the SLECC facility for expansion of the Headstart/ Pre-K program or sell the facility.

3.1.2 - Total Capital Needs Identified by the District

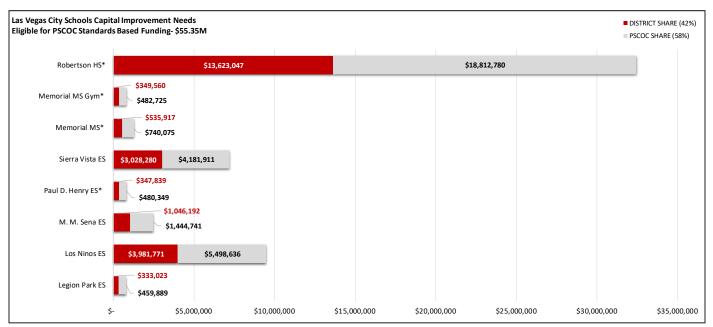

As part of the prioritization process, a meeting was held with the district's Board of Education, Administrative Staff, facility manager, and members from the Facilities Committee to review the facility conditions, needs and capital improvement costs for all of the district's facilities. The *total* outstanding capital needs for Las Vegas City Schools is approximately \$70.6 Million for bringing all existing schools and support facilities up to current physical and programmatic standards *post* "Right-Sizing", decommissioning and demolition of unneeded facilities, and includes associated soft costs such as architect/ engineering fee's, specialty consultants, testing and surveys, furnishings/ equipment, contingency and NMGRT.

As part of the 2017 General Bond election, the school district will allocate *most* of the \$11 Million towards projects that can qualify for PSCOC Standards or Systems based projects over the next five years as well as proceeds from the 2021 GO Bond election. LVCS intends to seek Standards based funding as funds are available for Los Ninos Elementary and Sierra Vista Elementary, including demolition funding for Paul D. Henry Elementary and Legion Park Elementary from the current GO Bond cycle.

The district will hold its next General Bond Election in February of 2021 for an additional \$8-11 Million. When passed, the district will seek Standards Based funding from the PSCOC towards the district's next top priority which will be Robertson High School and because of the estimate cost and district's current match of 42% may be required to be completed in phases or the district may need to request a waiver.

When the current 2017 GO Bond priority projects are funded and completed, LVCS will have approximately \$52.3M remaining in capital improvement needs, of which \$15.2M will be the districts responsibility to provide matching funds for eligible PSCOC projects and an additional \$15.3M for projects that the district will need to fund at 100% from future bond elections.

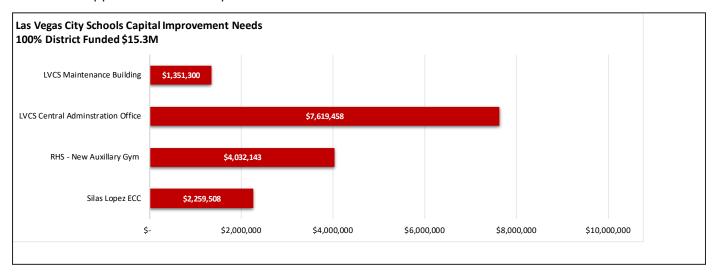

The chart below is a breakdown of the district's schools that would be eligible for PSCOC funding assistance and are LVCS top priorities over the next 5-8 years, the total PSCOC share is anticipated to be \$32,101,106(58%) and the districts share would be \$23,245,629 (42%):

^{*} Locations have facilities that have been identified for decommissioning/ demolition or sale

As with every school district, there are facility needs that are not typically covered by PSCOC funding and can range from district support facilities, to athletic facilities, special equipment, larger budgetary facility renewal items such as roofs or parking lots, minor renovation needs, playground equipment, technology and security upgrades. The chart below, identifies district funded projects over the next ten years, which could have funding allocated from the either the 2017 or 2022 GO Bonds including future GO Bond elections, as well as be supplemented where possible with SB-9 monies.

Technology

LVCS has currently determined that robust connectivity and speed is to be designated a priority. As part of the district's "Right-Sizing Plan" LVCS will be working to install fiber optics at the remaining four schools. LVCS is currently working with the NMPSFA Broadband Deficiencies Program to help fund upgrades to each of the school sites over the next year to accomplish this goal as soon as possible. The LVCS Technology Department is working to implement a replacement schedule for outdated hardware and software and continue to look for ways to expand the catalogue of technology tools available to students and staff for continued educational excellence. Funding sources for all technology projects over the next five years will include operational funds, state technology funds, technology grants, SB-9 money, GO Bond money, and Title funds, as well as E-Rate funding.

| The district will utilize PDCD and E Date funding to ungrade fiber | | <u>Budget</u> |
|---|-------------|-------------------------------|
| The district will utilize BDCP and E-Rate funding to upgrade fiber to district schools and support offices: | | \$117,000 |
| Interactive Technology in all Classrooms: | | \$100,000 |
| Telephone system replacement and upgrades: | Total Cost: | \$300,000 \$517,000 |

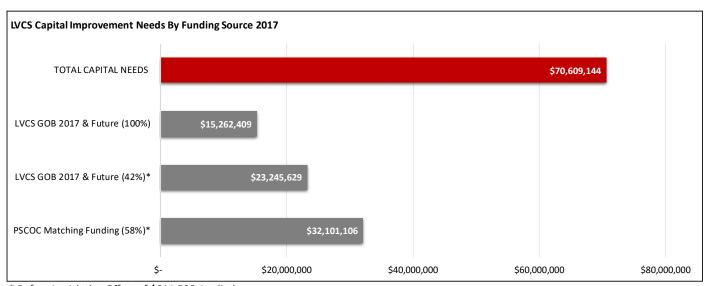

3.2 Prioritization Process

3.2.1 - Prioritization of Capital Needs

District Capital Improvement priorities were recommended to the Las Vegas City Schools Board of Education by the Facilities Master Plan Committee that consisted of representatives district administration and staff, in consultation with the District's Facilities Master Plan consultant and NMPSFA. At this time the needed Capital Improvements at LVCS include provisions for a classroom addition and demolition of several existing educational facilities to meet its reduced enrollment, improve educational programs district-wide and to reduce operation and maintenance costs. LVCS will continue to address its preventative maintenance needs as funds allow from its SB-9 funding as identified in its current PMP Plan.

The Capital Improvement Needs were reviewed to determine the district's priorities and then compared to the 2017/18 NMCI based school rankings for possible reconciliation. Out of the district's top 4 priorities, only two schools did not align with the 2017/18 NMCI school based rankings: Sierra Vista Elementary and Robertson High School. With only \$11M from the current 2017 GO Bond to work with initially, it was determined that the district would prioritize the renovation and classroom addition to Los Ninos Elementary (#33) and renovation to Sierra Vista Elementary (#62) first as they will be the district's primary K-6th grade school locations. Robertson High School has a NMCI ranking of 60, but will be deferred until the district's next GO Bond election in 2021 due to the high cost of the project as it will more than likely require a whole GO Bond cycle to complete the needed capital improvements, and Mike Mateo Sena Elementary (#82) will the district's next priority after the high school is completed.

A Capital Improvement strategy was developed address all the capital needs at the maximum number of sites based on available funding and ensure completion of all recommended work at any one facility. Completion of all recommended projects is in line with the stated goals of the PSCOC and will maximize resources and prevent repetitive work that is common in phased implementation. This strategy for LVCS Capital Improvement Plan implementation, is based on the availability of funds from the 2017 GO Bond, future Standards Based or Systems Based PSCOC matching funds and the successful passage of the districts next GO Bond in 2021 to continue to address the district's capital improvement needs over the next four to eight years.

* Before Legislative Offset of \$611,538 Applied

3.3 Capital Plan

3.3.1 – Anticipated Funding Source for each Project

While direct legislative appropriations are another source of funding for New Mexico State Public Schools; there is however, no established method of dispersing funds. Funds are requested from the local legislator for specific projects and the legislator has to determine who receives funds and how much. If a district receives a direct appropriation, a portion of the appropriation may be deducted (offset against) from any future PSCOC award and should be taken into consideration prior to accepting any direct appropriations for capital projects. As of 2017/18, Las Vegas City Schools has a direct legislative appropriations offset in the amount of \$611,538 that

would be applied towards the State of NM share if the district is awarded capital outlay funds from the PSCOC.

Currently, the district's 2017 GO Bond and future GO Bond proceeds (with matching PSCOC funding where applicable) will be the primary source of funding for the majority of projects Las Vegas City Schools undertakes. The next General Obligation Bonds election is anticipated to be held in 2021 to fund the projects based on the district's next set of priorities and may be adjusted to accommodate changing needs in the district as determined by the Las Vegas City Schools Board of Education.

Additional future GO bond elections will need to be held and/or other funding options will need to be considered if the PSCOC Funding Assistance were to become limited to address the district's capital improvement needs such NMDOT, San Miguel County Road Funds, Energy grants through ENMRD or other energy programs, and technology grants to address site and technology improvements as a way to supplement current GO Bond funding stream. The district will self-fund capital projects at 100% for facilities that are not eligible for PSCOC funding assistance out of the 2017 and 2021 GO Bonds and may also require funds from future GO Bonds to complete.

Overall Total Project Budgets pertain to the needed building systems renewal. The Total Project Budgets not only include the cost of construction but the soft costs associated with each project such architectural and engineering services, special testing, and equipment and furnishings as well as a contingency for unexpected conditions and NMGRT.

The chart on the following page identifies the district's Capital Improvement Priorities by the proposed funding source. The Total Project Costs not only include the estimated cost of construction but the soft costs associated with each project such architectural and engineering services, special testing, and equipment and furnishings as well as a contingency for unexpected conditions and NMGRT.

| Las Vegas City Schools Capital Improvement Priorities by Funding Source | | | | | | | | | |
|--|-----|----|------|------------|----|------------|----|------------|------------------------------|
| 2017/18 NMCI District Total Project Building System Ranking Priority MACC Soft Costs Budget Funding Source | | | | | | | | | |
| Los Ninos Elementary | 33 | 1 | \$ | 6,636,284 | \$ | 2,844,122 | \$ | 9,480,406 | 2017 GO Bond/ PSCOC |
| Paul D. Henry Elementary* | 51 | 2 | \$ | 637,704 | \$ | 190,483 | \$ | 828,187 | 2017 GO Bond/ PSCOC |
| Sierra Vista Elementary | 62 | 3 | \$ | 5,047,134 | \$ | 2,163,057 | \$ | 7,210,191 | 2017 GO Bond/ PSCOC |
| Legion Park Elementary* | 122 | 4 | \$ | 610,543 | \$ | 182,370 | \$ | 792,913 | 2017 GO Bond/ PSCOC |
| Robertson High School | 60 | 5 | \$ | 25,797,095 | \$ | 10,670,875 | \$ | 36,467,970 | 2021 & Future GO Bond/ PSCOC |

| Memorial Middle School | 268 | 7 | \$ | 1,623,373 | \$ | 484,904 | \$ | 2,108,277 | Future GO Bond/ PSCOC |
| Silas Lopez Early Childhood Center | - | 8 | \$ | 1,581,656 | \$ | 677,852 | \$ | 2,259,508 | Future GO Bond |
| LVCS Central Office | - | 9 | \$ | 5,333,620 | \$ | 2,285,837 | \$ | 7,619,458 | Future GO Bond |
| LVCS Maintenance Complex | - | 10 | \$ | 945,910 | \$ | 405,390 | \$ | 1,351,300 | Future GO Bond |
| Total Facility Costs | | | \$ 4 | 49,011,063 | \$ | 20,246,781 | \$ | 70,609,144 | |

^{*} Demolition to be included as part of renovation projects at Los Ninos and Sierra Vista Elementary as schools are consolidated.

3.3.2 - Priorities for State Funding Assistance

The Las Vegas City Schools through the Facility Master Plan process has developed a Capital Improvement Plan to address the identified facility needs throughout the district over the next five to eight years. The district has four elementary schools that are identified as high priority, two of which have been identified for demolition. These four schools should be considered for funding as the district is being proactive through its "Right-Sizing" initiative in reducing square footage and will in the long term also will be reducing operation and maintenance costs. LVCS will be seeking PSCOC funding assistance over the next five years of approximately \$10M for facility improvements that will need to be addressed through the Standards Based Funding Assistance process and will require matching funds from the district's 2017 in the amount of \$8.3M.

The remaining capital improvement projects in the district that qualify for PSCOC matching funds total \$52.3M and will require \$30.8M in funds from the 2021 & Future GO Bond cycles from the district and \$21.5M in matching funds from the PSCOC. The chart below identifies the projects identified for State Funding Assistance if available, to complete the identified projects with available GO Bond funds as approved by the Las Vegas City Schools Board of Education.

3.3.3 - Adoption of Facility Master Plan

The Las Vegas City Schools District-Wide Facility Master Plan 2017-2022 was adopted by the Board of Education on March 28, 2017.

4.1 - Site / School Detail

Las Vegas City Schools

In order to develop a comprehensive Capital Improvement Plan for Las Vegas City Schools, it must first be acknowledged that the condition of each school facility is directly related to the overall environment in which teaching and learning occurs. To objectively determine the existing conditions of school facilities and sites, comprehensive facility assessments were conducted by Visions In Planning, Inc., April 11-12, 2016 There were four components to the facility assessment process which took into consideration the following:

- The "actual" physical condition of all building systems at each school campus
- · Site conditions (playgrounds, bus/ parent pick-up & drop parking, etc.)
- · The availability of technology at each site
- · The educational suitability and compliance with the NM Adequacy Standards

The facility assessments were developed using an industry standard scoring system; that works in conjunction with the State of New Mexico's Facility Assessment Database. LVCS has over the past 10 years upgraded building systems such as roofs, HVAC and plumbing as funds were available. The Facility Assessment Database (FAD) reports for each school have been reviewed and updated and submitted to NMPSFA for inclusion into the current database reports.

The facility assessment process involved a visual walk-through review of the visible and accessible components of the campus buildings and related structures. The roof surface, interior and exterior wall finishes, and floor and ceiling finishes of the on-site building and related structures were visually assessed to check their condition and to identify physical deficiencies where observed. The assessment did not include an intrusive

investigation of wall assemblies, ceiling cavities, or any other enclosures/assemblies. No physical tests were conducted and no samples of building materials were collected to substantiate observations made, or for any other reason. However, during the facility assessment process structural settlement issues were discovered at several locations. The LVCS Superintendent was notified and the district contracted with Chavez-Grieves Engineering to conduct structural investigation reports of the identified facilities - a copy of this report is included at the end of this document.

The review of the mechanical systems, electrical systems, and fire & life safety systems at the property

included discussions with the site representative and review of pertinent maintenance records that were made available. A visual walk-through assessment of the mechanical systems, electrical systems, and fire & life safety systems was conducted to determine the type of systems present, age, and aesthetic condition.

Building functionality and adequacy standards compliance were also reviewed as part of this process. As expressed by the district staff and the various stakeholders, an extremely important component in the facilities assessment was the educational suitability and adequacy of each school facility. Educational suitability and adequacy responds to the question:

"Does the building and the site support and enhance the delivery of the educational program while complying with 6.27.30 NMAC NM Public School Facility Adequacy Standards?"

Each facility site visit started with a meeting with the school's principal or designated representative and proceeded to a room by room visual review. These reviews took place during the active part of a school day to assess how the facilities were being used.

The overall campus's ability to meet the educational program needs was determined with reference to the school specific needs and its ability to comply with the NM Adequacy Standards. As part of the overall facility assessment the following is a listing of some of the major items that were included for review:

- · Traffic Patterns & Parking
- · Parent & Bus drop and pick-up
- · Safety and Security
- · Learning Style Variety
- · Classrooms sizes
- · Location of Administrative Offices relative to the Main Entrance
- · Storage
- · Ease of Supervision/ Building Security

Final results of the assessment reports were used in determining the needed facility improvements and systems replacement. The listings below identify a sampling of observed conditions district wide for all schools in regards to both building systems and educational adequacy.

Sampling Of Observed Conditions - Building Systems

- · Parent and Bus drop-off and pick up area improvements
- · Parking lot needs paving
- · Site Fencing to improve security

- Aged, obsolete electrical distribution and branch panels with limited circuit capacity.
- Energy efficient light fixtures and ballasts not utilized districtwide.
- · Exterior doors and windows need to be replaced.
- · Exterior stucco systems need repairs and new color coat
- Hazardous Material any remaining flooring, ceilings, mastic, piping insulation, etc require remediation and removal as schools are renovated.
- HVAC systems and controls needing to be upgraded Cooling is not provided at some locations
- Hot water boilers, storage tanks, and piping require replacement
- · Multiple facilities require roof replacement
- · Parking lot needs paving
- Hazardous Material flooring, ceilings, mastic, piping insulation, etc. require remediation and removal as schools are renovated.

Sampling Of Observed Conditions - Educational Adequacy

Elementary Schools

- · Secure entry's needed
- · Classrooms in need of renovation
- · Kindergarten classroom below NMAS
- Schools were not configured for ease of supervision need for increased security/ access
- · Special education spaces were too small or insufficient
- Technology upgrades
- · Schools did not support a variety of learning styles

Middle & High School

- · Secure entry's needed/ Site Fencing
- · Classrooms in need of renovation
- · Science labs in need of renovation and new equipment
- Specialty program spaces such as Wood, Welding, Small Engine Repair and Ag Shops need renovation and new equipment.
- Special education spaces were too small or insufficient in quantity.
- · Exterior play-field improvements needed
- · Kitchen/ Cafeteria upgrades

2017 - 2022 Facility Master Plan • Las Vegas City Schools

SECTION 4.0 - SUPPORT INFORMATION

As the district implements the Facilities Master Plan over the next five years, the facility conditions assessment can be used as a baseline for school improvements at each existing school facility in conjunction with each facilities Capital Improvement Plan. The detailed information contained in Section 4 includes replacement and repair costs that are based on industry standard unit rates (based on 2016 costs), combined with local experience gained by Visions in Planning in order to establish baseline budgeting for the district over the next five years.

The quantities associated with each item have been estimated during a walk-through site assessment and do not represent exact measurements or quantities. At the time of replacement, specific "scope of work" statements and price quotations should be established by the District and the budgetary items revised to reflect actual expenditures. Not included are costs associated with items that would be addressed as routine maintenance. However, the capital costs may include items, which are currently managed under the Operations and Maintenance budget for the site.

4.1.1 – Early Childhood Center

Site Acreage:..... 1.9

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year the West Las Vegas Schools Head Start/ Pre-K Program which serves up to 80 students from both districts is currently located at Los Ninos Elementary will be relocated to the SL Early Childhood Center (Head Start/Pre-K enrollment is <u>NOT</u> included in the LVCS "official" enrollment). The district's kindergarten program will continue in place at this location until the 2019/20 school year when the Kindergarten will be integrated to the Los Ninos Elementary School. This facility may continue to remain in operation for the WLVS Head Start/ Pre-K program and be expanded to include more students from LVCS.

Facility Notes and Comments:

Silas Lopez Early Childhood Center (SLECC) is located at 1022 9th Street, near NM Highlands University. The school was originally constructed as an elementary school in 1964 and has had one addition in 2004 and consists of 18,025 permanent SF. The school was converted to serve the district's Kindergarten student population in the 1990's. As part of the district's approved "right sizing" plan, the district intends to either repurpose this facility into a Head Start/ Pre-K school once the classroom addition is completed at Los Niños Elementary or if enrollment continues to decline may consider selling the facility.

Site:

Centrally located just east of the Las Vegas Plaza, access to the site is from 9th Street into the main parking area which is also used as the parent drop-off/ pick-up area. Congestion often occurs at the start and the dismissal of school along 9th Street. The bus drop-off/ pick-up area is located on the west side of the facility along Mora Avenue and can only be accessed via a set of steps to the sidewalk which does not have curbing but only metal bollards for protection. There is not an ADA access ramp to the bus drop-off/ pick-up area. There is a small parking lot that can be accessed on the north side of the facility from Baca Avenue that is for staff parking. The playground equipment has recently been relocated to the southwest side of the facility to improve safety. Overall site drainage is fair as there are several areas of ponding due to roof drainage around the facility that need re-grading for positive drainage; concrete aprons need to be installed around the building perimeter and repairs to the retaining wall that separates the sidewalk from the playground are needed.

Structural/Exterior Closure:

The SLECC was constructed with a continuous concrete footing and slabon grade foundation that appears to be in fair to good condition with a steel structural system consisting of columns, beams and roof structure. The exterior walls consist of a combination of fluted CMU at the most recent classroom addition and CMU with a light-colored brick veneer and all of which are in fair to good condition. However, there are some areas in need of minor repairs, and the entire building needs joint maintenance and tuck-pointing.

The roof consists of a standing seam metal roofing system that only has one small area with any type of any guttering / downspout system and more is needed to help route water drainage away from the facility. All metal flashings and seams appear to be good condition at this time, however both materials will require re-caulking/ maintenance at all joints and seams, and should be included as part of the district's Preventative Maintenance Plan.

Drainage issues- Regrading needed

Concrete apron around building needed

Drainage improvements needed

Install concrete apron around building & utility lines

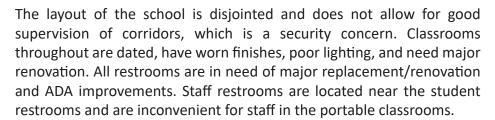

Gutters & downspouts needed

Exterior doors and frames are hollow metal, and the doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors. All the exterior doors and frames are in poor to fair condition and should be replaced. The exterior window system is combination of aluminum double paned, operable, and fixed window systems which are also in need of replacement as many of the seals are broken throughout.

Interiors:

The interior walls consist of a combination of painted CMU block and wood stud framing with gypsum board that is painted. The flooring throughout is a combination of carpet or vinyl asbestos tile in offices and the library, and aging vinyl composition tile are in most classrooms/corridors. The interior doors are solid core wood and some have vision panels in the door, and the door frames are hollow metal. Ceilings in classrooms, corridors and offices are a mixture of standard 2'x4' lay-in and 12" x12" acoustic ceiling tiles, that may contain asbestos.

The school has several classrooms that do not meet minimum adequacy standards for kindergarten and may not have the capacity to accommodate its enrollment without the use of portable classrooms. Staff and faculty areas are inadequate in size, and the nurse's office is too small to meet the needs of the current enrollment. The school does not have a secure entry as the administration office is very small and awkwardly arranged near the main entrance.

Mechanical/Plumbing:

The HVAC system serving the school is comprised of a central boiler system that is in need of complete replacement. The chiller system that provides refrigerated air and was replaced in 2014, however some of the exterior piping insulation wrap needs replacement. The indoor air circulation is poor and an additional air handler is needed to provide fresh air through the facility. The exhaust fans in the restrooms are in fair condition and should be replaced during the next major renovation of the facility. Restrooms are in good to fair condition and minimal ADA upgrades are needed. All the water heaters are more than 10 years old and nearing the end of their useful life. All water fountains throughout are in need of replacement.

Provide secure admin & main entry

Reattach light lens in restroom

Replace ceiling tiles stained/damaged

Replace carpet

Replace damaged wall tile

Electrical:

The electrical service to the facility is provided by a 150 KVA. 120/208V., pad mounted transformer that provides power through the 1200 amp, 3-phase, 4 wire MDP. The school is also in need of a secondary service upgrade throughout to accommodate current and future technology needs. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures and surface mounted fluorescent light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system consists of audible and visual annunciators throughout the building. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC — Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, with security cameras in strategic areas to be installed to better monitor the building. Overall, the facility only meets the minimal ADA requirements and requires improved access to the facility, interior door hardware upgrades, access, restroom renovations, and additional access/accommodation in public areas.

FMAR's:

This school does not currently have an FMAR Report on File.

Replace carpet tripping hazard

VCT deteriorated

Replace damaged/missing insulation

Wiring to be reworked at connections

Mechanical Room

Install concrete apron & splash blocks

Reset splash block for proper drainage

Replace missing ceiling tiles

Parking bumpers needed & repave parking lot

Install new fencing

Replace water fountains & comply w/ ADA

Restrooms need ADA upgrade

Repair damaged roof corner

Replace HVAC system

No ADA access to bus drop-off/pick-up

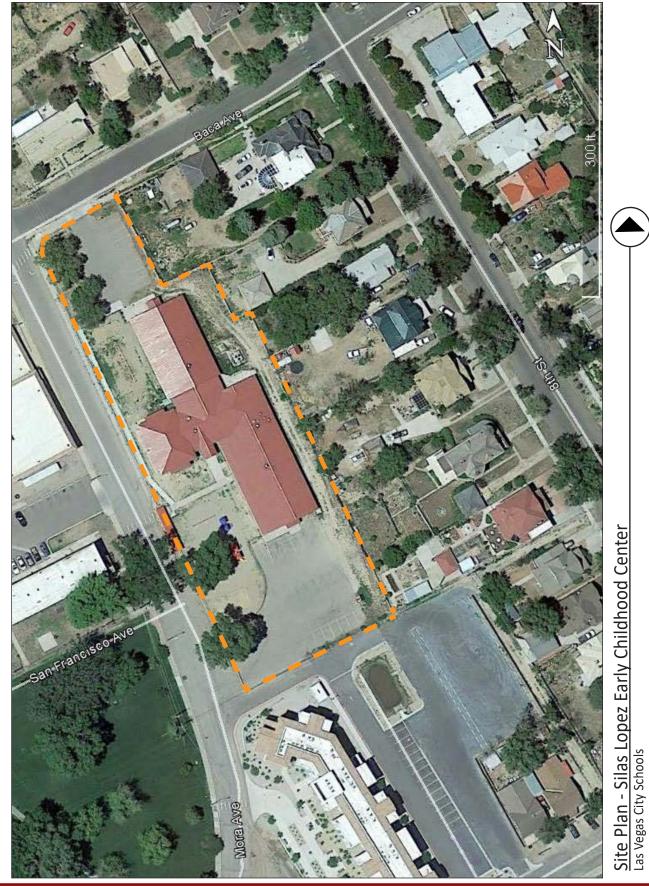

Exterior caulking needed at all joints & tuck point

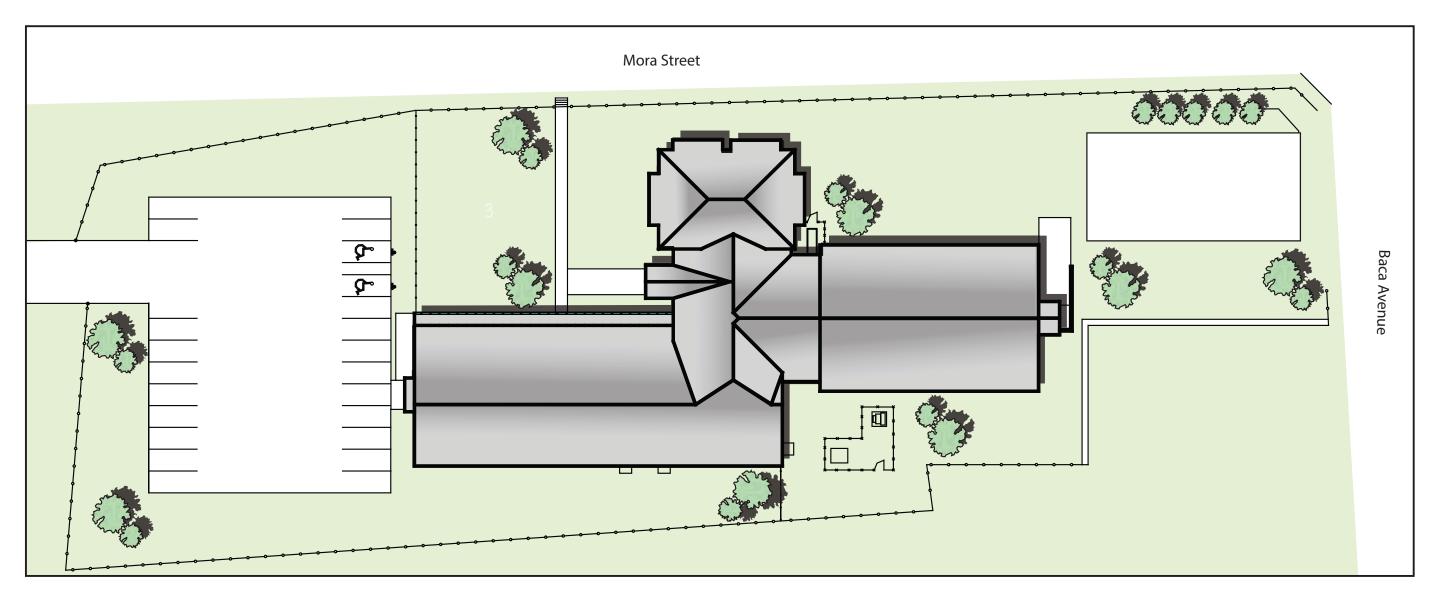

New bus drop configuration needed

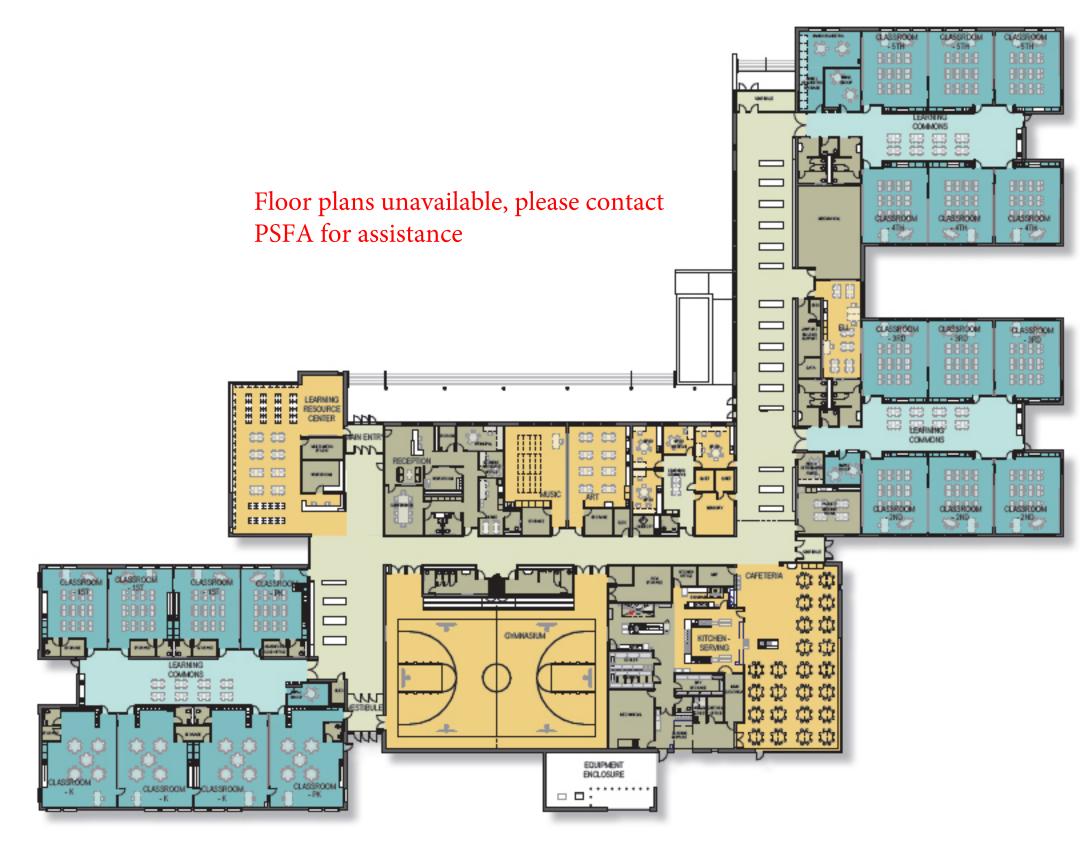

Las Vegas City Schools- Silas Lopez Early Childhood Center Site Plan

SITE PLAN
SILAS LOPEZ EARLY CHILDHOOD CENTER CAMPUS PLAN

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | | | 2017.00 | Other | Future CO | |
|--------------------------------|-------------|---------------|---------|------------------|-------------------|--|
| Calcad Facilities / Paillation | Maintenance | 2013 GO Bond | | Other Funding | Future GO Bond | |
| School Facility/ Building | Work Order | Project Funds | Funds | Options | Project | Facility Deficiencies & Needs Repair damaged building eave, soffit and soffit panels at the corner of |
| Early Childhood Center | Х | | | | | the roof - NE end of the building. (It appears that something has run into the building eave) |
| Early Childhood Center | Х | | | | | Replace insulation wrap on chiller piping (exterior). |
| Early Childhood Center | Х | | | | | Replace damaged/ stained ceiling tiles throughout |
| Early Childhood Center | Х | | | | | Install occupancy sensors in all restrooms and storage areas. |
| Early Childhood Center | | | | | Х | Improve drainage - regrade for positive drainage away from building and to reduce ponding. Provide concrete apron around building perimeter and reset existing splashblocks at downspouts. |
| Early Childhood Center | | | | | Х | Repair/ Replace portions of retaining wall between playground and sidewalk area that are cracked and damaged. |
| Early Childhood Center | | | | | Х | Repaint handrails at steps to bus drop/ pick-up area and provide ADA access ramp to this area. |
| Early Childhood Center | | | | | Х | Parent drop/ pick-up area needs to be reconfigured/ relocated to reduce traffic congestion. |
| Early Childhood Center | | | | | Х | Restripe existing parking lots, provide parking bumpers and ADA compliant signage. Expand south parking lot to add additional parking. |
| Early Childhood Center | | | | | Х | Install gutters, downspouts and splashblocks around the building and replace damaged fascia. Some areas may require additional drainage improvements. |
| Early Childhood Center | | | | | Х | Construct trashbin enclosure for trash dumpster |
| Early Childhood Center | | | | | Х | Clean and tuck point exterior masonry, re-caulk all vertical joints, around wall openings and misc. wall penetrations. |
| Early Childhood Center | | | | | Х | Replace exterior windows including blinds |
| Early Childhood Center | | | | | Х | Replace exterior doors, frames and hardware. |
| Early Childhood Center | | | | | Х | Replace all exterior building lighting - LED |
| Early Childhood Center | | | | | Х | Replace casework in administrative area |
| Early Childhood Center | | | | | Х | Renovate Library: Flooring, lighting, interior finishes, and furnishings. |
| Early Childhood Center | | | | | Х | Remove VCT, repair any damaged concrete throughout and polish concrete. (including restrooms) |
| Early Childhood Center | | | | | Х | Replace carpet with carpet tile in all classrooms and offices |
| Early Childhood Center | | | | | Х | Replace all corridor drinking fountains provide wing walls if required to meet ADA requirements |
| Early Childhood Center | | | | | Х | Install exhaust vent in mechanical room |
| Early Childhood Center | | | | | Х | Replace 12x 12 ceiling system in classrooms in south classroom wing. |
| Early Childhood Center | | | | | Х | Replace coiling counter door at kitchen serving area |
| Early Childhood Center | | | | | Х | Upgrade interior lighting throughout including all offices, storage, multi- purpose, restrooms, and instructional areas to LED. |

2017 - 2022 Facility Master Plan • Las Vegas City Schools

SECTION 4.0 - SUPPORT INFORMATION

| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|---------------------------|---------------------------|-------------------------------|----------------------------------|-----------------------------|------------------------------|---|
| Early Childhood Center | | | | | Х | Building Security : Reconfiguration of administration space to relocate into office area opposite main entry for visible connection and to improve/ control building access. |
| Early Childhood Center | | | | | Х | Upgrade Fire Alarm System |
| Early Childhood Center | | | | | Х | Replace Janitor mop sinks and surrounds in all custodial closets |
| Early Childhood Center | | | | | Х | Replace Boiler System - Heating and provide individual thermostat control |
| Early Childhood Center | | | | | Х | Install new DDC system for HVAC, and test and balance ALL equipment. |
| Early Childhood Center | | | | | Х | Install fire sprinkler system throughout the entire building to meet CURRENT NM IEBC Code Requirements. |
| Early Childhood Center | | | | | Х | Install security camera system (interior/exterior) and connect to central monitoring system. |

Soft Costs for this project include: Contingency - 10%, A/E Fee's 7.5%, Specialty Consultant Fee's - 1.0%, District Equipment & Furnishings - 3%, Surveys and Soils Tests - 1.0% and NMGRT 7.5%. TOTAL SOFT COSTS: ~30.0%

2017 - 2022 Facility Master Plan • Las Vegas City Schools

SECTION 4.0 - SUPPORT INFORMATION

FAD & FMAR REPORTS

Silas Lopez Early Childhood Center does not currently have either a FAD or FMAR Report available from PSFA, even though this school has been designated as a Kindergarten only facility for the past ten years. This information was discovered during the Facility Master Plan process, and a request for a facility assessment has been made to PSFA to assess this facility to be included into the FAD as well as an FMAR completed.

4.1.2 – Legion Park Elementary

Site Acreage:..... 9.05

Constructed:...... 1964 (1991, 1996, 2001)

| Total | 222 | 209 | 198 | 197 | 196 | 175 | 170 | 166 | 182 | 185 |

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year Legion Park Elementary will be closed and all 1st-5th grade students will be split according to grade level between Los Ninos and Sierra Vista Elementary Schools. All existing 5th graders (2016/17) will transition to 6th grade at Sierra Vista Elementary and not to the middle school. *This facility has been identified for decommissioning and demolition.*

Facility Notes and Comments:

Legion Park Elementary is located on the northwest side of Las Vegas at 730 Legion Drive and currently serves grades 1st-5th. The school was originally constructed in 1964 with additions in 1991, 1996, and 2001 that have resulted in 31,733 SF of permanent space and does not have any portable classrooms on site. The facility layout is a Z-shape design with double-loaded corridors that are difficult to supervise and needs a major renovation. As part of the district's approved "right sizing" plan, the district intends to close this facility effective the 2017/18 school year and relocate students to either Los Niños or Sierra Vista Elementary Schools. This facility has been identified for demolition and the property will be retained by the school district at this time.

Site:

The school is located just west of Walmart, along Legion Drive and consists of 9.05 acres. The school has access to a dirt play-field on the northeast side of the playground, the remainder of the northern portion of the site is an open field area. Traffic along Legion Avenue is steady all day and is congested prior to the start of school and at dismissal as parents pick up children. The parking lot is accessed from Legion Avenue, and is also used for parent drop-off and pick up and does not easily accommodate traffic; a complete rework of this area is needed. The bus drop-off/ pick up lane located just west of the playground. The parking lot pavement is poor condition, needs to be repaved including paving along the north and east sides of the building, all striping redone and new lighting installed. The concrete steps, ramps and sidewalks throughout the campus are spalled and cracked in multiple locations creating tripping hazards and need to be replaced.

Overall site drainage is fair, there are areas that need to be corrected primarily along the south and west sides of the facility and the entire site landscaping needs to be replaced with low water need plants and an irrigation system installed. The playground equipment is in fair condition overall, with a few pieces having been replaced within the past 10-15 years, however the remainder of the equipment needs to be replaced and ADA improvements made. The site fencing is damaged multiple areas around the perimeter of the school and needs to be replaced including the main gate system.

Structural/Exterior Closure:

Legion Park Elementary was originally constructed in 1964, with concrete footings and a slab-on grade foundation that appears to be showing signs of minimal settlement (primarily due to the age of the facilities); exterior masonry walls, steel columns and joists and metal decking form the roof structure system. The exterior walls consist of a combination of CMU with a light-colored brick veneer, which needs repairs, joint maintenance and tuck-pointing, and stucco system that also needs repairs with new color coat.

The roof consists of an granulated asphalt membrane roof system that is at the end of it's useful life. At one time a portion of the roof had been coated and is now deteriorated, and the facility experiences leaks. Exterior doors and frames are hollow metal; doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors.

Grading & drainage improvements needed

Install concrete apron around building

Replace exterior doors & frame

Replace exterior doors & windows

Pavement deteriorated

Exterior doors are in fair to poor condition and lack both vestibules and automatic door openers, which are needed at strategic locations to meet accessibility requirements and to improve the school's security. Exterior windows are a combination of insulated single-hung operable units and non-operable units all of which need replacement including clerestory windows in the multi-purpose room due to broken seals, condensation, and other conditions.

Interiors:

The interior partition walls consist of painted gypsum board on metal stud construction. The exterior CMU walls have been furred out on the interior and consist of painted gypsum board finish. Classroom finishes and built-in casework are in fair condition as majority of the classrooms have the original casework and is very worn including the sinks and faucets. Many of the classrooms also have the original chalkboards in place, which some students have issues with dust/ chalk allergies. The interior door frames are hollow metal with solid wood doors, all classroom doors have vision panels.

The ceilings throughout are a combination of 2'x4' suspended acoustical panels and areas of plaster with 12"x12" acoustical panels that are glued on, with many tiles throughout that are stained and damaged. There are many areas throughout the building that need replacement ceiling tiles in areas that have had roof leaks. The storage and restroom areas have painted gypsum board ceilings with either surface mounted or recessed lighting.

Floor finishes throughout are in need of replacement and are a combination of vinyl composition tile (VCT) in the storage areas, multi-purpose room and carpeting in the corridors, which in several areas is coming unglued. The classrooms have a combination of VCT and carpet or ceramic tile and carpet. The restrooms have either ceramic tile floors with wainscoting and the administrative offices, and library have carpet.

The school does not have a secure entry as the administration office is very small and awkwardly arranged near the main entrance. The interior layout of the school is disjointed and does not allow for good supervision of corridors, which is a security concern. Classrooms throughout are dated, have worn finishes, poor lighting, and need major renovation. All restrooms need renovation and ADA improvements as a majority of the restrooms are located in the classrooms. Staff and main administrative areas are inadequate in size, and the nurse's office is too small to meet the needs of the current enrollment. The on-site kitchen that is used to prepare meals daily, is too small and is below NMAS for an elementary kitchen. A complete renovation and enlargement of this area is needed.

Mechanical/Plumbing:

The facility has a combination of multiple HVAC systems to provide heating and cooling to most of the facility, there are some classrooms that have traditional rooftop package HVAC units with refrigerated air or evaporative air, and several classrooms have "mini-split" systems that serve more than one area. These multiple systems often cause issues with maintaining a consistent temperature control throughout the facility.

Repair/replace metal flashing

Replace deteriorated sidewalks

Replace roofing

Replace carpeting throughout

Restrooms renovations needed including ADA compliance

The school is connected to the municipal water and sewer systems and the onsite water/ sewer lines are original and have been reported to be in fair to good condition and portions may need to be replaced as part of the renovation process. Restrooms throughout the facility are mostly ADA compliant, in fair condition and need renovation and upgrades. The water fountains need replacement throughout.

Electrical:

The electrical system is fed from a 300kVA ground mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. While the primary service was last upgraded in when the facility added to in 1996, the facility is also in need of a secondary service upgrade throughout to accommodate the increased technology needs. Many classrooms have outlets that do not work or enough available to meet technology needs, and teachers utilize power strips and extension cords to have power where they need it. Either surface mounted, pendent or 2X4 lay-in fluorescent light fixtures provide lighting throughout the facility, with many being the original light fixtures from the 1960's. Lighting throughout the facility (both exterior and interior) is in fair to poor condition and requires a complete upgrade including possible new wiring in many areas.

The fire alarm system consists of audible and visual annunciators throughout the building. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, with security cameras in strategic areas to be installed to better monitor the building. Overall, the facility only meets the minimal ADA requirements and requires improved access to the facility, several interior door hardware upgrades, facility access, restroom renovations, and additional access/ accommodation in public areas.

FMAR's:

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. As this school site has been identified for closure at the end of the 2016/17 school year, all major findings unless related to immediate life, health, safety corrections will not be completed. As for the minor findings, only items that have a direct mission critical impact will be corrected.

Replace VCT throughout

Kitchen renovation needed

Replace roof jacks

All wiring needs to be cleaned up

Reroute condensate lines

Replace missing downspouts

Replace all damaged site fencing

Resurface & re-stripe parking lot to meet ADA requirements

Replace spalled/broken sidewalk

Replace exterior windows

Resurface paving on northeast side of building

Splash blocks missing

Replace missing gutters

Replace roofing

Install corner guards throughout

IT server & equipment needs to be reorganized

Replace damaged/stained ceiling tiles

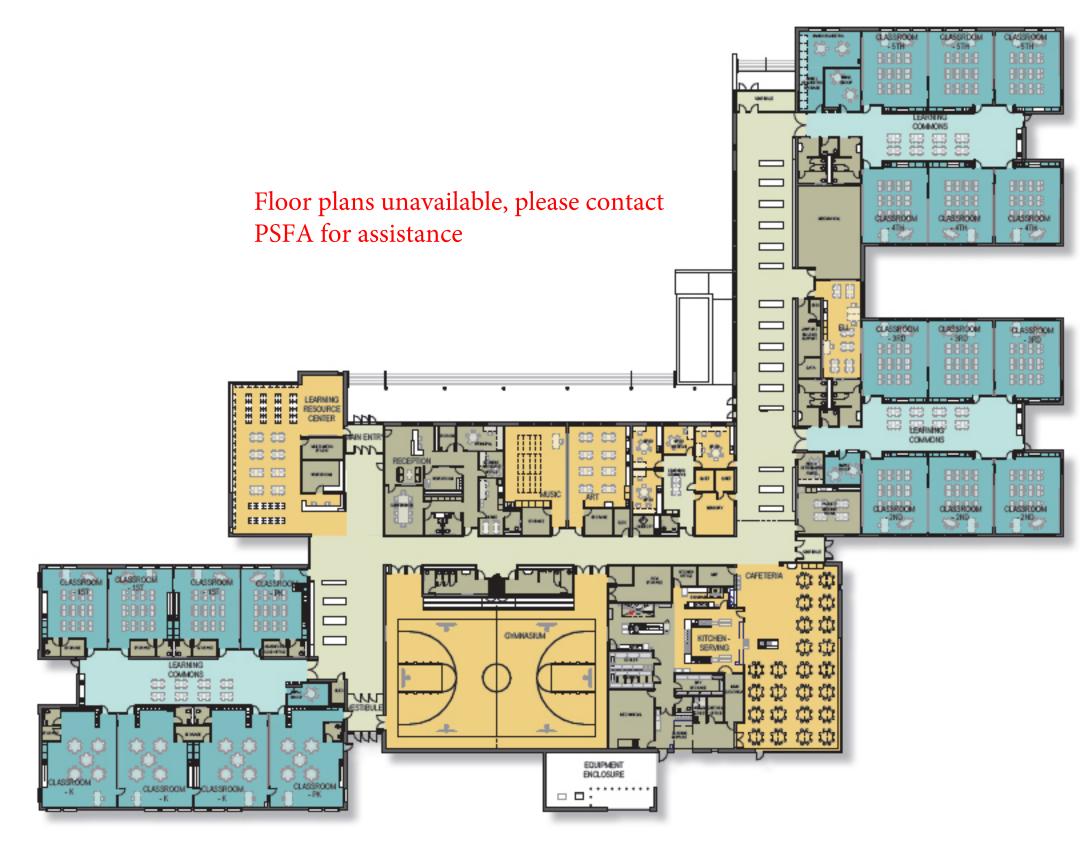

Las Vegas City Schools - Legion Park Elementary Site Plan

SITE PLAN
LEGION PARK SCHOOL CAMPUS PLAN

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|---------------------------|---------------------------|-------------------------------|----------------------------------|-----------------------------|------------------------------|--|
| Legion Park Elementary | | | Х | | | FACILITY IS TO BE CLOSED AS OF THE 2017/18 SCHOOL YEARND HAS BEEN IDENTIFIED FOR DEMOLITION |
| Legion Park Elementary | Х | | | | | Fencing repairs/ replacement needed around playground and install gate to secure parking lot |
| Legion Park Elementary | Х | | | | | Reseal Hose Bibbs at exterior walls |
| Legion Park Elementary | Х | | | | | Replace broken window pane on the south side of the south classroom wing. |
| Legion Park Elementary | Х | - | | | | Install door stop at south exit from north classroom wing and patch and repaint hole in wall. |
| Legion Park Elementary | х | | | | | Remove hanging wires from missing exterior light fixture and school bell at south classroom wing - west exit doors. Seal wall opening. |
| Legion Park Elementary | Х | | | | | Repair damaged overhang on the north side of the north classroom wing |
| Legion Park Elementary | Х | _ | | | | Repair/ seal seam along gutters to reduce leaks |
| Legion Park Elementary | Х | | | | | Repair Fan Coil Unit serving the IT Server room |
| Legion Park Elementary | Х | - | | | | Test all rusted rooftop/ exterior gas lines for leaks & repair as required. |
| Legion Park Elementary | Х | - | | | | Replace stained/ damaged ceiling tiles throughout - multiple location |
| Legion Park Elementary | Х | - | | | | FRP in the dishwasher area of the kitchen is coming off of the wall and needs to be reattached. |
| Legion Park Elementary | Х | _ | | | | Toilets in the south classroom wing classrooms need to be re-caulke along the toilet bases and flush valves cleaned. |
| Legion Park Elementary | Х | - | | | | Steam clean tile grout in all restrooms |
| Legion Park Elementary | | | | | | Grading and drainage improvements needed to provide positive drainage away from the north side of the building to reduce ponding. |
| Legion Park Elementary | | | | | | Repair cracks, resurface asphalt and restripe parking lots including asphalt area along north side of building. Replace all damaged parking curbs and install new where missing. |
| Legion Park Elementary | | | | | | Bus and Parent drop/ pick-up area needs to be reconfigured/ relocat to reduce traffic congestion. |
| Legion Park Elementary | | | | | | Replace broken/ spalled concrete sidewalks at south and west sides of south classroom wing. |
| Legion Park Elementary | | _ | | | | Construct trashbin enclosure for trash dumpster |
| Legion Park Elementary | | | | | | Seal perimeter of the main building between adjacent sidewalk and building edge to reduce water infiltration and damage to stucco - multiple areas where there are gaps 1/2-1". |
| Legion Park Elementary | | | | | | Replace/ upgrade playground equipment/ play areas and install shad structure |
| Legion Park Elementary | | | | | | Repair/ Replace irrigation system and re-landscape site to improve appearance and reduce maintenance. |
| Legion Park Elementary | | | | | | Repair/ improve baseball field (fencing, backstop, bleachers, field area) |
| Legion Park Elementary | | | | | | Provide ADA signage at all parking areas and provide ADA compliar accessible route to the main entry. |
| Legion Park Elementary | | | | | | Sand, primer and repaint all exterior metals including bollards, flashing, trim and handrails. |
| Legion Park Elementary | | | | | | Clean and tuck point exterior masonry, re-caulk all vertical joints, around wall openings and misc. wall penetrations. |

| | Maintenance | 2013 GO Bond | • | Other Funding | Future GO Bond | |
|---------------------------|-------------|---------------|-------|------------------|-------------------|---|
| School Facility/ Building | Work Order | Project Funds | Funds | Options | Project | Facility Deficiencies & Needs |
| Legion Park Elementary | | | | | | Replace exterior window system including blinds |
| Legion Park Elementary | | | | | | Replace exterior doors, frames and hardware. Main entry - east doors (north and south) and west doors of south classroom wing, and west side doors of the Multipurpose room. |
| Legion Park Elementary | | | | | | Roofing: Replace roof system |
| Legion Faik Liementary | | - | | | | Rooming. Replace 1001 system |
| Legion Park Elementary | | _ | | | | Provide splash blocks at all downspouts. |
| Legion Park Elementary | | | | | | Replace exterior lighting with LED |
| Legion Park Elementary | | | | | | Replace VCT flooring and wall base throughout (North wing classrooms, restrooms, storage rooms and multi-purpose) and polish concrete |
| Legion Park Elementary | | | | | | Replace carpet in classrooms and replace with carpet tile |
| Legion Park Elementary | | - | | | | Replace all corridor drinking fountains provide wing walls if required to meet ADA requirements |
| Legion Park Elementary | | _ | | | | Replace exit sign at south classroom wing west entrance |
| Legion Park Elementary | | - | | | | Install additional emergency back-up lighting |
| Legion Park Elementary | | _ | | | | Remove carpet in all corridors and polish concrete |
| Legion Park Elementary | | | | | | Upgrade interior lighting throughout to LED |
| Legion Park Elementary | | | | | | Replace faucets and classroom sinks - south classroom wing |
| Legion Park Elementary | | | | | | Recover/ replace fabric on the acoustic wall panels in the multi- purpose room. |
| Legion Park Elementary | | - | | | | Replace Janitor mop sinks and surrounds in all custodial closets |
| Legion Park Elementary | | | | | | Ed Adequacy: The nurse's office is 99sf and does not meet minimum requirements for a nurses office per NMAS and is a converted storage closet. The kitchen is 451SF including DW area and is significantly below NMAS for a full kitchen at an elementary school. |
| Legion Park Elementary | | _ | | | | Install new DDC system for HVAC, and test and balance ALL equipment. |
| Legion Park Elementary | | | | | | Install fire sprinkler system throughout the entire building to meet CURRENT NM IEBC Code Requirements. |
| Legion Park Elementary | | | | | | Install security camera system (interior/exterior) and connect to central monitoring system. |
| Legion Park Elementary | | | | | | Ed Adequacy: Construct new elementary gym. Existing multi- purpose room does meet minimum requirements for elementary PE. |

Capital Improvement Costs: Legion Park Elementary

The costs below are for demolition of this facility based on the approved Board of Education's "Right Sizing Plan" that will consolidate the students from this facility into other schools that have excess capacity in the district. The costs that have been identified on the following page identify the costs for facility improvements needed if this facility were to be retained for educational purposes for budgeting purposes.

| Las Vegas City Schools | F | Revised 2-16-17 | MACC | \$ 610,543 |

Executive Summary Report

School: Legion Park ES District: Las Vegas City

School ID:

069045

Facility Description

Legion Park Elementary School is located on Legion Avenue in Las Vegas, New Mexico, and falls within the Las Vegas City School District. It is a 1-story, single facility, 34,219 square foot campus that houses 214 Kindergarten through 5th grade students and has a staff of 29. Originally constructed in 1964, there have been additions to include 10,510 SF for a library and classrooms in 1991; 5,000 SF for a cafeteria in 2001. Proposed and Awarded 2003 - 2004 Capital Outlay project to remodel and re-roof 10 classrooms in original building (\$800,000). There are no portable facilities on site. To accurately capture repair costs, the complex is split into four building assessments (1964 - 16,309 SF; 1991 - 10,510 SF; 1996 - 5,000 SF; and 2001 - 2,400 SF.

Site: The immediate site is approximately 8.67 acres and includes a playground and hard surface play area. The school has a parking repacity of 42 (0 are handicap spaces). Paved areas require surface improvements. Concrete sidewalks are damaged. Landscaped areas include grass and these areas are not irrigated. Site drainage is inadequate.

ng structural system uses masonry and steel. The façade ow metal and windows are operable, ior doors are Structural/Exterior Closure: The building rests on spread footing foundations that are showing no signs of damage or settlem. includes 1960's style features, which are not architecturally significant. Roofing is built-up and modified bitumen single-pane units with steel frames.

ings are acoustical tiles with some 2 x 4 lay-in tile. Flooring in high use areas is 991. Mc Interiors: Partition wall types include painted CMU and painted drywall. The facility was las carpet, while rooms/suites have vinyl composition tile. Interior doors are solid wood.

units and distribution is via ducts with diffusers. Fresh air is supplied through windows and g fixtures and copper piping are original. ate. The plumb ng Mechanical/Plumbing: Heating and cooling for the building is supplied by gas-fired heat doors. Exhaust fans are operable and bathroom ventilation is generally adequate. The

I-ph, 4-wire power via an 800 amp main panel. Branch circuits within rooms are 120/208 V. Lighting is fluorescent ors and some exit signs are not illuminated. The facility has no emergency generator 240 V -up are in corrid that delivers Electrical: The electrical system is fed from a 150 kVA transforme and illumination is adequate. Emergency lighting with batte

system consists of pull stations at exits and horns and strobes in corridors. The system is not centrally monitored. The building does not Me separation and interior doors on escape corridors are fire rated. There is no security system. The complex is not handicap priate Fire Protection/Life Safety Systems/Accessibility: The corridors do no compliant and requirements include ran have a fire sprinkler system. Egress

of areas. There is safe access and adequate parking when considering dirt areas. The gross square footage is not adequate for the current enrollment; Educational Adequacy: The facilities generally do normeet the state general adequacy requirements. Adequacy deficiencies include missing kitchen equipment, an inadequate number of projection an addition of 6,037 SF is required. The serviced does not have a two-way public address system, classrooms have data ports, but CATV is not provided throughout. surfaces, and inadequate bus and student dro

mis to fire alarm, intercom DCU #03-199: District wide improvem

Proposed and Awarded 2003 -2004 Capital Outlay project to remodel and re-roof 10 classrooms in original building. \$800,000

Comments Section

Roadway/Parking

Asphalt drive lanes are in poor condition. Major pot holes, pitting and cracking North/Northwest Parking. Cracking in drive lanes East main parking. Recommend additional review and repair or critical areas up to replacement.

Site Utilities

Main exterior electrical panel locked and secure from tampering. Gas line protected and contain no issue at this time.

Playgrounds/Athletic Fields

Playground equipment's protective coating is worn in a couple areas. Graffiti/scratching in see through piece of tunnel area needs attention. Impact surface in place. Athletic Field no longer being used due to water issues.

Site Drainage

North side of site is a major concern for drainage due to poor design. Water puddles against building causing water to entry classrooms. Recommend resealing ground to wall area. Assessment of grade level recommend. Splash blocks missing throughout site. Drains need to be cleaned of debris.

Sidewalks

Sidewalks have areas of flacking and spalling surface of walkway East side(entry) of school. Recommend repair on the North East corner sidewalk where cracking and chipping is accruing. No lifting or separating spotted.

Grounds

Grounds throughout facility in need of grooming from bushes to mowing of grass to weed control. Removal of trash and debris. Recommend more attention in this area.

Windows/Caulking

Multiple Broken windows throughout site. Broken window in classroom covered with plywood. Recommend timely repair of this issue. Some window screens are torn and worn. Window seals are cracking in areas recommend reviewing and correcting areas of concern.

Walls/Finishes

Wall finishes overall in good condition. 1- area of concern; boys bathroom behind door has a hole in sheetrock due to door handle. Recommend repair of sheetrock, installing wall guard to prevent recurrence of this issue

Entry/Exterior Doors

1- Exterior door not closing properly in need of adjustment. Some doors need to be repainted in heavily used areas.

Roof/Flashing/Gutters

Roof is a big concern; multiple areas where roof leaks. Modified bitumen has heavy wear. Most of the roof granules washed into roof gutters. Multiple areas need to be resealed to prevent further leakage. Gutters need to remove roof granules from gutters. Some touch-up painting needed in areas.

Walls/Floors/Ceilings/Stairs

Ceilings contain multiple stained ceiling tile due to roof issues. 2-areas water damage to interior walls due to roof leaks. Cafeteria has some broken VCT tile in need of replacement. Walls are clean and maintained.

Interior Doors

Interior doors contain smoke seals, all hardware intact and doors close properly. Jambs painted and in good condition.

Restrooms

Restrooms are very clean and well maintained. Recommend increasing high dusting on return air/ supply vents.

Housekeeping

Housekeeping is evident in common areas classrooms, hallways and offices. Recommend increasing high dusting on return air and supply vents.

Elecrical Distribution

Electrical panels maintain 3'-0" clearance in all areas. Panels contain no issues at this time.

Lighting

Exterior lighting has multiple broken lens covers in need of replacement. Security light on South side of school is on in the middle of the day. Multiple interior lights are out and need to be replaced.

Fire Protection Systems

Fire monitoring system present with no trouble or advisory codes. Fire extingushers contain monthly/annual inspection review. Hood system inspection present and up to date.

Equipment Rooms

Unable to access main equipment room. Informed by maintenance Equipment has been changed to RTU/HVAC units and equipment room is now empty. Unable to confirm.

Heating/Cooling/Ventilation

Recommend coil guards to prevent further damage to coils on HVAC/RTU units. Units installed 2012, some coil damage from hail storm observed.

Air Filters

Unable to access filters at time of visit. Informed by maintenance supervisor there is a PM plan in affect and filters are being changed on a quarterly basis. Unable to confirm.

Kitchen Equipment/Refrig

Kitchen equipment is older but well maintained and in working condition. Kitchen drains clean and free of debris. Kitchen is well maintained.

Plumbing/Water Heaters

Water heaters maintain 3'-0" clearance. Water fountain in good working condition. No other issues at this time.

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year Los Ninos Elementary School will begin its transition as a PK-3rd Elementary. Kindergarten will transition to the facility in 2019/20 once a 4.5 classroom is constructed.

Facility Notes and Comments:

Los Niños Elementary is located in the northeast side of Las Vegas at 474 East Legion Drive. The school was originally constructed in 1989 and has two additions in 2002 and 2011. The school facility consists of 47,431 SF of permanent space. This facility was originally constructed as primary school to serve as a "feeder" school to the immediately adjacent intermediate school – Sierra Vista Elementary, but within a few years was converted into a "traditional" elementary school model. As the district's Dual Language School, Los Niños Elementary currently serves grades K-5th and is also used to house the LVCS/WLVS Head Start Program. As part of the district's approved "right sizing" plan, the district intends to re-purpose this facility effective the 2017/18 school year as the district's "main" intermediate school serving grades 1st-3rd, until the 2019/20 school year when Silas Lopez Early Childhood Center is closed. This facility needs major renovation and a 4.5 classroom addition in order to accommodate kindergarten students.

Site:

The school site is located northeastern part of the city, west of I-25 and consists of 26.77 acres that is also shared with the adjacent Sierra Vista Elementary. Based on the current facility locations, Los Niños Elementary utilizes approximately 11.75 acres of the south side of the site. The bus drop-off and pick-up access areas are shared by both schools, with each school having their own dedicated area. The site is located in a residential area that is bordered by public streets on three sides with adjacent open space areas. The site is easily accessed from either Mountain View or Legion Drives, both parking areas are limited in size and compete with the parent drop-off and pick-up areas. As part of the repurposing of both schools on site, additional parking and new parent drop-off and pick-up areas will be needed, as well as a new bus loop.

All paved areas are in fair condition and the main parking lot needs crack repairs and resealing. Concrete sidewalks around the building and on the north side of the site have several areas of spalled surfaces, settlement, and cracks due to tree roots and erosion that need to be replaced to prevent tripping. Site drainage around the building perimeter and overall site needs to be improved to help get water away from the building and reduce site erosion, as well as around the playground areas. Landscaped areas include grass areas and xeriscaping around the school, these areas are irrigated on a controlled sprinkler system where available or manually watered. A low fence separates the playground from the street to the west, but this fence does not enclose the play area in its entirety. The existing fencing is in need of replacement and new fencing installed around the remainder of the site. There are play fields on the southeastern portion of the site that are partially grassed but need reseeding and weed control/ prevention. The playground equipment is age appropriate and is in fair to good condition, needing only partial replacement; a shade structure over the main playground is also needed.

Structural/Exterior Closure:

Los Niños Elementary was originally constructed in 1989, with concrete footings and a slab-on grade foundation that appear to be showing signs of minimal settlement (primarily due to the age of the facilities); exterior concrete masonry

Drainage improvements needed around perimeter

Tuck point masonry & replace glass block

Replace rusted doors & frames & reseal at concrete base

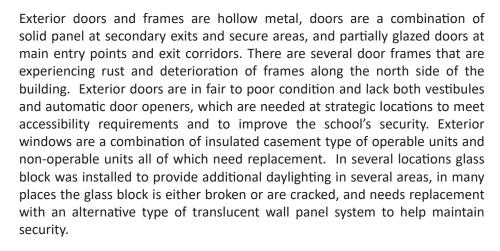

Ponding water - improve drainage

Repair & paint damaged soffits

walls, steel columns and joists and metal decking form the roof structure system. The exterior walls consist of a dark reddish CMU, which needs repairs, joint maintenance, and tuck-pointing. The roof consists of a TPO single-ply membrane roof system that was replaced in 2005, an area of old asphalt roofing over the 2002 classroom addition, and few areas of standing seam metal roofing with soffit panels that are damaged and need replacement. There is a covered walk-way that connects this school to Sierra Vista Elementary on the north side of the building that still has its original asphalt roofing installed and is in poor condition. The roof over the years has experienced multiple leaks, many of which have been coming from the facility's original skylights as well as areas that have had poor flashing maintenance on the roof. The facility has several large and small skylights that need replacement as they are also original and have had multiple issues with leaking.

Interiors:

The interior of the facility is a continuation of the reddish CMU block walls throughout with areas of and metal stud framing with gypsum board that is painted. Classroom finishes and built-in casework are in fair condition as majority of the classrooms have the original casework from the original construction and is very worn. The interior door frames are hollow metal with solid wood doors, all classroom doors have vision panels located in the center. The ceilings throughout are a combination of 2'x4' suspended acoustical panels and painted gypsum board are in fair to good condition. There are many areas throughout the building that need replacement ceiling tiles in areas that have had roof leaks and there are also multiple places where the gypsum board ceilings have been also damaged by leaks and needing repairs, especially around some of the skylights.

Floor finishes throughout the entire facility need replacement. Carpeting that is in fair to poor condition can be found in the corridors, administrative areas, group breakout areas, library, and classrooms; and vinyl composition tile (VCT) in some classrooms. The multi-purpose room has rubber flooring with play-court markings, and restrooms have ceramic tile floors and a 4' to 9' high wainscoting.

Re-caulk all vertical joints

Repair all cracks & resurface parking lot

Skylights are in poor condition

Clean/repair water damaged walls/soffits

Water damaged window headers

fact that the administrative offices are not located adjacent to the main entry is a security issue for the school. There is a bell/ camera system to allow entry to the building during school hours, however it does not prevent visitors from wandering off and not checking into the office. During the master plan process, it was identified that the existing administrative offices need be reconfigured to improve security and provide a secure entrance to the school.

Located in the center area of the school is an enclosed courtyard/ play area that is used during inclement weather days by students or for other group activities. The area consists of concrete flooring, planter areas with indoor vegetation, exposed structure, skylights and interior CMU divider walls to provide activity separation. Upgrades in terms of painting and repairs to damaged exposed ductwork are needed. Most of the general classrooms currently serving grades K-5th grade meet or exceed the minimum NMAS square footage, however, there are classrooms that are between 100-200 SF below the minimum NMAS square footage 1,000 sf for use as a kindergarten classrooms. The proposed new 4.5 classroom addition will help correct this deficiency.

All restrooms need major upgrades and renovation, as they are still in their original configuration, many fixtures are not operable, and are not ADA compliant. Restrooms located in the administration suite also do not meet ADA requirements and the doors cannot open fully due to the placement of the toilets. While all meals are prepared at the adjacent Sierra Vista Elementary, the school does not have a proper warming kitchen or serving area to properly heat and serve food, a small addition may be needed to improve this function.

Mechanical/Plumbing:

The facility has a combination of a gas fired boiler system that was replaced in 2011, and roof top make-up air and evaporative cooling units all of which need replacement. While a temperature control system is in place to try and maintain a consistent temperature throughout, it is difficult to maintain proper cooling temperatures with the old equipment and humidity is often a problem. The exhaust fans in the restrooms require replacement, as they are minimally operable and do not provide adequate ventilation. All of the water heaters are between 12 and 15 years old and are also in need of replacement. Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed in every restroom. District has reported issues with the existing water and sewer lines, which will require upgrading/ replacement as part of any renovation project.

Electrical:

The electrical system is fed from a 300k VA pad mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. While the primary service appears to be sufficient, as part of any renovation effort this will need to be re-evaluated and may require a possible upgrade. The facility is in need of a secondary service upgrade throughout. Many classrooms have outlets that do not work or enough available to meet technology needs, and teachers utilize power strips and extension cords to have power where they need it. Either surface mounted, pendent or 2X4 lay-in fluorescent light fixtures provide lighting throughout the facility, with many being the original light fixtures from

Restroom renovations needed

Replace stained/damaged ceiling tiles

Replace VCT flooring

Repair water damaged ceiling

Upgrade lighting

the 1980's. Lighting is in poor condition (interior/exterior), requires a complete upgrade, and may need to include new wiring in some areas, including in the interior courtyard area.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system consists of audible and visual annunciators throughout the building and needs to be replaced. The system is activated by pull stations, and is centrally monitored in the administrative office. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC — Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is the original equipment and installed sporadic in terms of placement of emergency back-up wall packs and light fixtures, all of the equipment needs to be upgraded.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors. There are several exterior security cameras located in strategic areas but many of these are inoperable or broken. A complete new security camera system needs to installed. Overall, the facility only meets the minimal ADA requirements and requires improved access to the facility, several interior door hardware upgrades, facility access, restroom renovations, and additional access/ accommodation in public areas.

FMAR's

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. All major findings have been combined with additional deficiencies identified from the FMP facility assessments into larger capital improvement projects that have been prioritized in the district's Capital Improvement Plan. The minor findings in several areas have already been addressed and items that were not were also listed as maintenance repair needs were given to the LVCS Maintenance Department to be entered into School Dude and will become summer work projects.

Reattach covers to equipment

Roof maintenance needed

Rework drainage

New furnace system

New boiler system

Sidewalk & canopy repairs/replacement needed

Renovate all restrooms

Replace water fountains

Replace all exterior windows

Repair window header

Drainage improvements needed

Replace damaged/spalled concrete sidewalks

Repair water damaged walls

Remove damaged skylight

Repair basketball courts

Replace damaged benches

Skylight seals failing

Replace damaged VCT

Patch repair & paint ceiling

Resurface parking lot

Damaged roof flashing at all skylights

Re-caulk all vertical joints & tuck point masonry

New cooling system needs to be installed

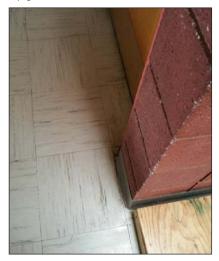

Repair all wall/ceiling water damage at all skylights

Carpet seams are deteriorating

Reseal building perimeter at sidewalks

Replace VCT flooring & install corner guards

Repair interior walls/ceilings

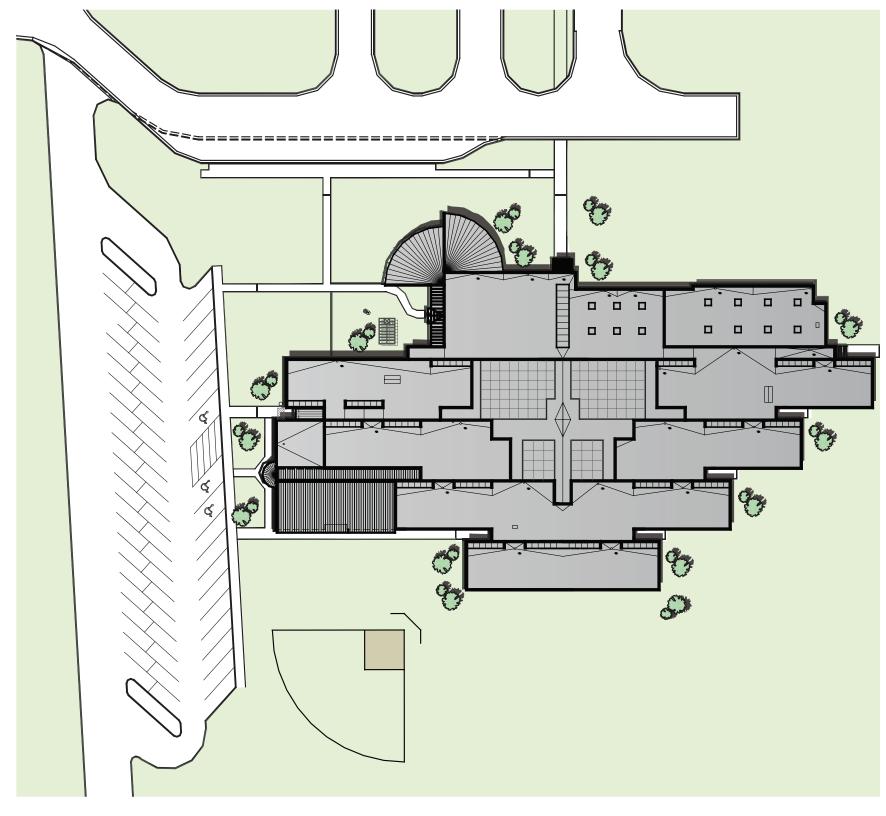

IT wiring & connection clean up required

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|---------------------------|---------------------------|-------------------------------|----------------------------------|-----------------------------|------------------------------|---|
| | | rrojectranas | Turius | Options | rioject | Reset all splashblocks to be above grade under downspouts. Set on |
| Los Niño's Elementary | X | | | | | gravel base course |
| Los Niño's Elementary | Х | | | | | Repaint all driveway curbing |
| Los Niño's Elementary | Х | | | | | Replace missing drainage trench cover at sidewalk on east side of building. |
| Los Niño's Elementary | X | | | | | Multiple roof leaks near wall joints and skylights - WARRANTY REPAIRS (Leak areas: cafeteria, indoor playground, library, office, front entrance, Head start #138, HS office and Room 129) |
| Los Niño's Elementary | Х | | | | | Replace / Repair and reattach exhaust hood shroud that is lying on the roof next to mechanical unit. |
| Los Niño's Elementary | Х | | | | | Test rusted rooftop gas lines for leaks and repair as required. |
| Los Niño's Elementary | X | | | | | Replace damaged/ stained ceiling tiles throughout - multiple locations |
| Los Niño's Elementary | Х | | | | | Replace missing door closers at south door to indoor play area and east exit door next to room 181. |
| Los Niño's Elementary | Х | | | | | Replace door hinges at hallway door to cafeteria |
| Los Niño's Elementary | Х | | | | | Repair damaged ceiling next to classroom 181 and repaint |
| Los Niño's Elementary | X | | | | | Roof Maintenance: Re-caulk all skylights, flashing and coping seams. Clean debris off of roof, from roof drains, gutters and downspouts. |
| Los Niño's Elementary | Х | | | | | Replace damaged chain-link fencing in front of the building |
| Los Niño's Elementary | | | X | | | Site drainage improvements needed to correct ponding, erosion and improve soil stabilization around the building and all playfield structures. The site is also plagued with weeds containing "goat heads" which the students frequently encounter - remediation is needed. May require installation of concrete apron around portions of the building, valley gutters and french drains. |
| Los Niño's Elementary | | | X | | | Repair cracks, potholes, resurface asphalt and restripe parking lots (south and west sides). Provide parking bumpers, ADA signage and paint curbs. |
| Los Niño's Elementary | | | X | | | Replace exterior site lighting - parking lot and campus. Some of the existing light poles have exposed concrete footings 12-18" |
| Los Niño's Elementary | | | Х | | | Bus & Parent drop/pick up areas needs to be redesigned to improve traffic flow. (Partially shared with Sierra Vista) |
| Los Niño's Elementary | | | X | | | Improve site directional signage |
| Los Niño's Elementary | | | Х | | | Replace spalled concrete at basketball court |
| Los Niño's Elementary | | | Х | | | Construct trashbin enclosure for trash dumpster |
| Los Niño's Elementary | | | Х | | | There are multiple areas where the soffit panels are deteriorated and damaged, and were NOT REPLACED as part of the previous roofing project (round classroom area). Repairs and replacement required. |
| Los Niño's Elementary | | | Х | | | North covered walkway and sidewalk leading to Sierra Vista Elementary requires repairs to the covered structure, re-stuccoing, and reroofing. The walkway/ ramp is not ADA compliant, there are multiple areas of cracked sidewalk including around support columns which and need to be evaluated and the sidewalk replaced. |
| Los Niño's Elementary | | | X | | | Replace bridge over drainage swale near playground - needs to meet ADA requirements |

| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|---------------------------|---------------------------|-------------------------------|----------------------------------|-----------------------------|------------------------------|---|
| | | , | | | ., | |
| Los Niño's Elementary | | | X | | | Replace old deteriorated benches and tables near playground Upgrade indoor play area equipment and improve condition air flow to |
| Los Niño's Elementary | | | Х | | | this area. |
| Los Niño's Elementary | | | Х | | | Sand, primer and repaint all exterior metals including columns, flashing, trim, misc. framing and handrails. |
| Los Niño's Elementary | | | Х | | | Clean and tuck-point CMU, re-caulk all vertical joints, around wall openings and misc. wall penetrations. |
| Los Niño's Elementary | | | Х | | | Replace damaged sidewall exhaust vent |
| Los Niño's Elementary | | | Х | | | Donair damaged EIES and recolor coat |
| Los Niño's Elementary | | | X | | | Repair damaged EIFS and recolor coat Replace all exterior doors, frames and hardware. Multiple doors and frames are rusted, and deteriorated. |
| Los Niño's Elementary | | | X | | | Replace exterior window system in its entirety, including blinds. Replace glass block areas (which are all damaged/ broken) to be infilled with translucent wall panel system, some areas may require lintel replacement due to extensive water damage. Re-evaluate security bars on exterior windows with current egress requirements. |
| Los Niño's Elementary | | | Х | | | Replace all skylights most have failed and are leaking - Install new translucent panel skylight system. (12) 18'x5', (8) 18'x3' sloped, (1) 30'x6' barrel & (14) 4'x4' |
| Los Niño's Elementary | | | Х | | | Roofing replacement is still needed at the southwest end of the building (near the head start area) |
| Los Niño's Elementary | | | Х | | | Replace all exterior building lighting - LED |
| Los Niño's Elementary | | | Х | | | Building Security: Renovate/ reconfigure Administrative area for better functional use and improved building security, including nurse's office and restrooms for ADA compliance. |
| Los Niño's Elementary | | | Х | | | Renovate Library: Flooring, lighting, interior finishes, and furnishings. |
| Los Niño's Elementary | | | Х | | | Renovate & Expand Warming Kitchen - partial equipment replacement |
| Los Niño's Elementary | | | Х | | | Repaint Entire Interior |
| Los Niño's Elementary | | | Х | | | Remove VCT in the corridors, classrooms and restrooms, and polish concrete. |
| Los Niño's Elementary | | | Х | | | Remove carpet in corridors and polish concrete |
| Los Niño's Elementary | | | Х | | | Replace rubber flooring in Multi-Purpose |
| Los Niño's Elementary | | | Х | | | Replace classroom casework |
| Los Niño's Elementary | | | Х | | | Replace carpet with carpet tile in all offices, small group breakout seating areas and in Kindergarten classrooms |
| Los Niño's Elementary | | | Х | | | Replace all drinking fountains throughout provide wing walls if required to meet ADA requirements |
| Los Niño's Elementary | | | Х | | | Remove ceramic tile (including all broken) and entry mats and replace with new recessed mats and polished concrete |
| Los Niño's Elementary | | | Х | | | Replace chalkboards with marker boards & Smartboard |
| Los Niño's Elementary | | | X | | | Sand, prime and repaint interior door frames |
| Los Niño's Elementary | | | X | | | Replace interior doors and hardware |
| Los Niño's Elementary | | | Х | | | Install corner guards throughout to protect from future damage |

2017 - 2022 Facility Master Plan • Las Vegas City Schools

| School Facility/ Building | 2013 GO Bond Project Funds | | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|---------------------------|-----------------------------------|---|-----------------------------|------------------------------|--|
| Los Niño's Elementary | | Х | | | Renovate ALL restrooms in their entirety (flooring, finishes, plumbing, fixtures, lighting, partitions, accessories and ventilation) and comply with all ADA requirements. Inspect water/ sewer lines and replace as part of all restroom renovations. |
| Los Niño's Elementary | | Х | | | Replace cooling system - Install new chiller |
| Los Niño's Elementary | | Х | | | Install new DDC system for HVAC, and test and balance ALL equipment. |
| Los Niño's Elementary | | Х | | | Replace Janitor mop sinks and surrounds in all custodial closets |
| Los Niño's Elementary | | Х | | | Replace interior lighting throughout to LED, upgrade all emergency back-up and exit lighting including exit lighting |
| Los Niño's Elementary | | Х | | | Install fire sprinkler system throughout the entire building to meet CURRENT NM IEBC Code Requirements. |
| Los Niño's Elementary | | Х | | | Install security camera system (interior/exterior) and connect to central monitoring system. |

Capital Improvement Costs: Los Ninos Elementary

The costs below are based on the needed facility upgrades and repairs, and are based on industry standard unit rates (based on 2016 costs) for budgeting purposes for the district.

| Las Vegas City Schools | | Rev 11-09-16 | MACC \$ | 6,636,284 |

Executive Summary Report

School: Los Ninos ES District: Las Vegas City

School ID:

Facility Description

students and has a staff of approx 35. Originally constructed in 1990, there has been one addition. There are no portable facilities on site. To most accuratery capture repair costs the school is made up Los Ninos Elementary School is located in Las Vegas, NM, on Legion Avenue and falls within the Las Vegas City School District. It is a one-story campus that bardes Kindergarten through 5th grade of two building assesments.

The parking capacity of 60 (3 are handicap spaces) is insufficient and all nese areas are not irrigated. Site drainage is inadequate. Site: The immediate site is approximately 26.77 acres and includes an athletic field, playground, and hard surface play area. paved areas require no improvements. Concrete sidewalks are adequate. Landscaped areas include grass and 🍱 art. The building structural system uses block and steel. The facade includes exterior doors are hollow metal and windows are fixed and operable, double-pane Structural/Exterior Closure: The building rests on spread footing foundations that are showing no signs of damage 1980's style features, which are not architecturally significant. The modified bitumen roof is original and is units with aluminum frames

was last painted in 1990. Most ceilings are 2 x 4 lay-in tile with drywall ceilings in corridors Interiors: Partition wall types vary, where 80% are painted CMU and 20% are painted drywal Flooring in high use areas is carpet, while rooms/suites have vinyl composition tile. Interi

ough windows and doors. Exhaust fans are plentiful and bathroom ventilation is generally adequate. The Elementary (next door) and variable air volume units in each classroom. The heating/cooling distribution Mechanical/Plumbing: Heating for the building is supplied by a gas-fired boiler at Sierr system is 2-pipe and air is supplied by air handlers and fan-coil units. Fresh ains sup plumbing fixtures (toilets/urinals/sinks) are original and the piping is copper.

and lighting (with battery back-up) are in corridors and exit signs are typically illuminated. The facility has no emergency generator for merthat dejivers 277/480 V., 3-ph, 4-wire power via an 800 amp main panel. Branch circuits within rooms are 120/208 V. Lighting Electrical: The electrical system is fed from a 150 kVA transfe exit si fluorescent and illumination is adequate. Emergenor emergency lighting and critical system bac afarm system consists of pull stations at exits and public address in rooms and horns and strobes in corridors and other public spaces. The The security system is centrally monitored. The building does por bare afre sprinkler system. Egress corridors have appropriate fire separation and interior doors on escape corridors are fire rated. enerally handicap compliant. Fire Protection/Life Safety Systems/Accessibility: system is comprised of cameras. The complex Educational Adequacy: The facility generally meets the state general adequacy requirements. The gross square footage is adequate for the current enrollment. Adequacy deficiencies include missing number of projection surfaces and marker boards. There is safe access, but inadequate parking when considering dirt areas. There is a two-way public address system, classrooms have data pods, but CATV is not provided throughout. kitchen equipment and an inadequate

Electrical and Intercom in stallation. DCU 03-064: Fire alar ons 03-1453: Replace the roof and construct dual language classrooms. \$40,000.

These upgrades were made to the main building

Comments Section

Roadway/Parking

Parking area in need of stripping. Cracks and weeds starting to develop in the parking area. ADA ramp in place. Signage in place along with fire lanes clear and accessible. No direction arrows in place.

Site Utilities

Site utilities are locked and secure. No weeds or trash around ground units.

Playgrounds/Athletic Fields

Newer style playground equipment in place in fair to good condition. Impact surface material is pea gravel with weeds and goat heads needing to be removed. Surface impact area under the swings need to be filled in. Borders in place in the area next to the building, border area around playground equipment is either missing or buried.

Site Drainage

Several down spouts splash blocks missing, need to be replaced, leveled and raised to move water away from the building. Drain grates in place and secure.

Sidewalks

Sidewalks in good condition with no tripping hazards found. ADA ramp in place along with handrails. No safety or hazards found.

Grounds

Grass and weeds being removed during the site survey. Goat heads in the playground area also needing removal. Grass and weeds need to be removed from the playground area. Fenced in place in good condition. Semi-open campus.

Windows/Caulking

Windows are a combination of fixed frame and operational. Screens in place with window opening and closing along with latching lock in place. Exterior frames caulked and sealed. Glass block windows damaged with broken units needing replacement.

Walls/Finishes

Exterior CMU block in good to fair condition. Minor hard water spots. No cracks or holes needing repair. Overhangs are covered with metal siding and secure.

Entry/Exterior Doors

Entry doors have panic bars in place along with door seals. Closures working as designed. Several showing deterioration from age on the doors and frames. No broken glass panels.

Roof/Flashing/Gutters

Pitched metal and flat TPO in place. Roof drains blocked needing debris removal. One broken skylight needing to be replaced (district has filed insurance claim). RTU covers need to be reattached to prevent damage to the TPO roof. Roof drain covers need to be reattached.

Walls/Floors/Ceilings/Stairs

Interior walls are a mix of CMU block and sheetrock. Several areas of the sheetrock have water ripples from past roof leaks needing repair. Overall interior walls clean and painted. Carpet in several classroom needing to be stretched to prevent tripping hazards. This is a single story building. Floors are a mix of VCT and carpet.

Interior Doors

Interior doors secure with latching and closures in place and working as designed. No broken glass panels, door seals In place. No safety or risk hazards found during the survey.

Restrooms

Restrooms are clean and maintained with hot water to hand wash sinks. Fixtures tested for proper operation. Light fixtures in place with all in working order. Hand towel dispensers in place along with toiletries. Stall partitions in place in good condition along with hardware working as designed.

Housekeeping

The interior of the school is clean and maintained. Equipment available to the custodians for floor waxing along with additional equipment for maintaining the interior of the building. MSDS books in place and updated. Storage lockers in place for hazardous chemicals. R/R clean and maintained along with the interior

of the classrooms.

Elecrical Distribution

One electrical panel missing blanking plate allowing direct access to buss bar (district correcting this during the site survey). Overall electrical panels labeled and secure. Several storage items need to be removed from the electrical rooms to provide 3 ft. clearance.

Lighting

Lighting in several areas needing to have bulbs replaced. Overall lighting both on the exterior and interior in place and working as designed. No broken lens found. Emergency lights in place and several tested for proper operation. Light fixtures in the mechanical rooms working as designed.

Fire Protection Systems

The main fire panel during the site survey was in fault mode. Emergency lights, exit signs in place and several tested for proper operation. Drop box's in place along with strobe ligts. Panic bars on main exit doors. Fire extinguishers have current inspection date. Kitchen area is warming kitchen only.

Equipment Rooms

Equipment rooms needing some cleanup to remove storage items. North side equipment room clean and maintained. Mechanical rooms and equipment accessible.

Heating/Cooling/Ventilation

Newer boilers installed on the North side of the school. Air handlers starting to show deterioration, one unit had broken belt (repaired during the site visit). RTU's have missing covers needing replacement, debris removed and belts and bearings replaced.

Air Filters

Air filters in the air handlers needing to be re-installed and inspected.

Kitchen Equipment/Refrig

Warming kitchen only, food cooked at lower ES and brought over to Los Ninos ES and served to students. One refrigerator operating with proper temp.

Plumbing/Water Heaters

Hot water heater in place supplying hot water to hand wash sinks in the R/R and kitchen. No eye wash station in this ES. Drinking fountains in place and operational.

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year Mike Mateo Sena Elementary School will begin its transition as a K-6th Elementary. Current year (2016/17) 5th graders will transition to the 6th grade at this location.

^{*}Under current grade configuration

Facility Notes and Comments:

As LVCS's only rural elementary school, Mike Mateo Sena is located northwest of the City of Las Vegas in the community of Sapello at the intersection of NM HWY 94 and County Road A1. The school was originally constructed in 1953 and has had only one addition in 1995 when the multi-purpose gym was constructed. The school facility consists of 16,449 SF of permanent space and there is one double portable on site consisting of an additional 1,792 SF for a total of 18,241 SF. As part of the district's approved "right sizing" plan, the district intends to expand the grade levels this facility effective the 2017/18 school year and go from K-5th grade and include 6th grade. This facility needs renovation and facility improvements throughout.

Site:

Halfway between Las Vegas and Mora, MM Sena Elementary can be found in the small rural village of Sapello. The school site is in a predominantly rural environment. There is minimal development east of the school and there are a few residential units located near the school, which accounts for the low to moderate traffic density along NM HWY 94. The site is bordered by natural vegetation, and has two parking lots that are connected via the main access road which is only partially paved. One of the parting lots is located to the west side of the main entrance, and one to the north of the Multi-Purpose addition, all of which need asphalt repairs and resurfacing. The bus drop-off/ pick-up area is located in the west parking lot, which is also uses as one of the district's main pick-up areas for middle and high school students. The parent drop/pick-up is also located in this same area, however conflicts are kept to a minimum due to the schools low enrollment. Parking for visitors and administrative staff is located in the west parking lot and the remainder of the school staff parks in the north parking lot.

Access to the main entry is from the west parking lot via a steep ramp that is in poor condition, does not meet ADA requirements due to the slope and landings, and needs the handrails replaced. Sidewalks around the facility are in relatively poor condition with spalled surfaces and broken concrete. There is only minimal site fencing in place and additional is needed to help protect the site from wildlife and unwanted visitors. There is an outdoor basketball court area that has large areas of spalled concrete and needs to be replaced. The playground equipment was recently relocated in the spring of 2016 to help improve safety, however some equipment still needs to be replaced and ADA access provided.

Irrigation is via an agricultural type pipe system requiring labor intensive and inefficient hand assembly and disassembly. The site has a fairly significant slope along the western portion of the property and the drainage swale along the western side of the building needs to be improved as well as drainage improvements are needed along the north side of the Multi-Purpose addition.

Structural/Exterior Closure:

MM Sena Elementary School was originally constructed in 1953, with a concrete footings and a slab-on grade foundations that appear to be showing signs of minimal settlement (primarily due to the age of the facilities); exterior masonry walls, steel columns and joists and metal decking form the roof structure system.

All exterior walls need to be repainted

Install concrete apron around perimeter of building

Replace broken concrete stoop

Grading & drainage improvements needed

Replace metal wall panels

The building is set into the hillside making a portion of the western wall act as a retaining wall. The exterior painted CMU walls have larger areas where the paint is peeling off or is no longer in place. Repainting is needed as well as joint maintenance and tuck-pointing. The exterior of the Multi-Purpose addition consists of metal wall panels and there is a large area of damaged panels along the north side that need to be replaced. The roof consists of a TPO single-ply membrane roof system that was replaced in 2010 over the main portion of the building and standing seam metal roofing with metal flashing/trim over the Multi-Purpose addition. While the roofing was replaced over the main building in 2011, the fascia and some of the soffit areas still need to be replaced along with downspouts, gutters and splash-blocks need to be installed.

While the exterior doors and frames are hollow metal, the exterior doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors. Exterior doors are in fair to poor condition, and lack both vestibules and automatic door openers, which are needed at strategic locations to meet accessibility requirements and to improve the school's security. The exterior windows are a combination double-glazed aluminum fixed and single hung units and in the Multi-Purpose addition there are larger window units that allow excess heat to infiltrate the building. All exterior windows need to be replaced, consideration should be given to utilizing translucent wall panels in the Multi-Purpose addition to reduce heat gain.

Interiors:

The interior walls consist of a combination of painted CMU block, and wood/ metal stud framing with gypsum board that is painted. The flooring throughout is a combination of carpet in some classrooms and the administrative area, and library; and aging vinyl composition tile in the remaining classrooms, restrooms, computer lab corridors and in the Multi-Purpose room. There were a couple areas observed that appear to have the original vinyl asbestos tile in place that needs to be remediated. The interior door frames are hollow metal with solid core wood doors; some have vision panels in the door and remainder are solid panel. Ceilings in the administrative areas, corridors and classrooms are a mixture 14"x24" glue-on tiles(that may contain asbestos), and painted plaster ceilings. There were several areas observed that have water damage from previous roof leaks that still need to be repaired. Classrooms throughout are dated, have worn finishes, poor lighting, and need major renovation. Acoustic performance is very poor throughout the school due to the lack of any sound absorbing surfaces. All restrooms are in need of minor upgrades/ refurbishment.

The layout of the school is classical double loaded corridor design which allows for good supervision of corridors, however, the school does not have a secure entry as the administration office is very small and awkwardly arranged towards the middle of the building. The classrooms at Mike Mateo Sena Elementary School are all below the minimum adequacy standards for kindergarten and general classrooms at approximately 630 SF. However, due to the low enrollment of the school they are currently sufficient to meet the school's needs, unless the school experiences a significant increase in enrollment.

Upgrade lighting throughout

Replace water fountain

Replace VCT in multi-purpose room

Renovate NE restrooms & comply with ADA requirements

Clean all wall/ceiling joints & repaint

Mechanical/Plumbing:

The facility has a several rooftop HVAC units that provide heating and refrigerated air for evaporative that were replaced in 2010. Even with this replacement, there is still a problem with air flow throughout the facility and the existing make-up air units still need to be replaced as they are more than 20 years old. The exhaust fans in the restrooms require replacement, as they are minimally operable and do not provide adequate ventilation. All of the water heaters are more than 20 years old and are in need of replacement as well as all of the water fountains throughout.

The school is connected to own well system to provide water for domestic and irrigation use, and septic/ leech field system for sewer treatment on site. The septic tank overflows at times, which may be symptomatic of clogging, sediment in the leach lines or saturated drain field soil due to the age of the school. Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed in the south classroom wing and finish upgrades in the locker rooms. The district has reported issues with the existing water and sewer lines, which will require upgrading/ replacement as part of any renovation project.

The electrical system is fed from a 300KVA pad-mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility and was upgraded in 2010 with the installation of the new HVAC equipment. The facility does need a secondary service upgrade as many classrooms have outlets that do not work or enough outlets available to meet current and future technology needs; teachers utilize power strips and extension cords to have power where they need it. Either surface mounted, pendent or 2X4 lay-in fluorescent light fixtures provide lighting throughout the facility, with many being the original light fixtures from the 1950's. Lighting is in fair to poor condition and requires a complete upgrade including new wiring in many areas.

Evaluate all conduit lines & remove all unused conduit

Plumbing upgrades needed

Existing furnace system

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system consists of audible and visual annunciators throughout the building and was upgraded in 2003. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects, and may require a booster pump due the location of the school. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

FMAR's

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. All major findings have been combined with additional deficiencies identified from the FMP facility assessments into larger capital improvement projects that have been prioritized in the district's Capital Improvement Plan. The minor findings in several areas have already been addressed and items that were not were also listed as maintenance repair needs were given to the LVCS Maintenance Department to be entered into School Dude and will become summer work projects.

Grading & drainage improvements needed

Resurface parking lot

Replace metal railings, repaint curbs & install parking bumpers

Replace access sidewalk with ADA compliant ramp

Improve drainage around portables

Replace dormer windows with insulated translucent panels to reduce heat

 $\label{eq:ceiling system} \textbf{Replace lighting \& ceiling system}$

Renovate kitchen to NMAS & remove hazardous materials

Replace exterior windows

Repair damaged walls in Multi-Purpose room

Replace original school clock system

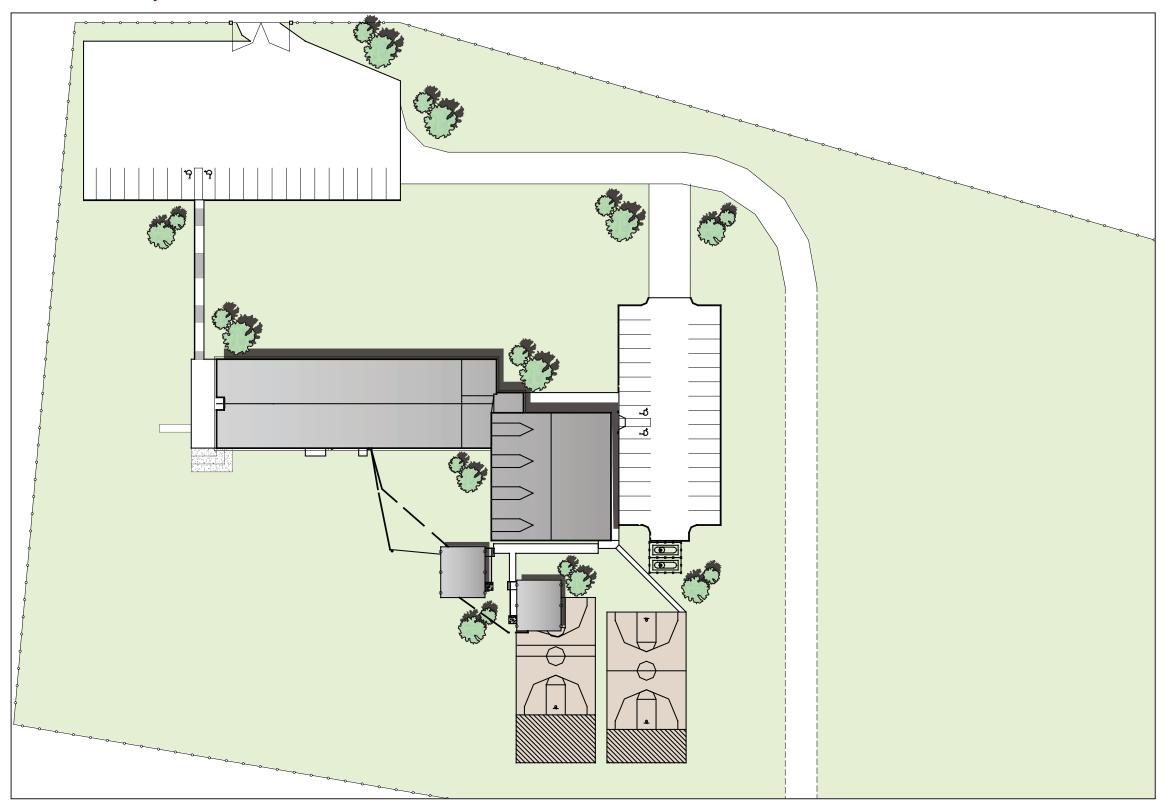

Replace floor finishes and update grab bars

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | Maintenance | 2013 GO Bond | 2017 GO Bond Project | Other Funding | Future GO Bond | |
|---------------------------|-------------|---------------|-------------------------|------------------|-------------------|---|
| School Facility/ Building | Work Order | Project Funds | Funds | Options | Project | Facility Deficiencies & Needs |
| Mike M. Sena Elementary | Х | | | | | Replace inoperable exit sign on south entry doors to classroom wing and install new sign at north entry doors. |
| Mike M. Sena Elementary | Х | | | | | Replace rooftop access ladder to HVAC System |
| Mike M. Sena Elementary | Х | | | | | Repair damaged east wall in the multipurpose/gym |
| Mike M. Sena Elementary | Х | | | | | Test all rusted rooftop/ exterior gas lines for leaks & repair as required. |
| Mike M. Sena Elementary | | X | | | | Site drainage improvements needed to correct ponding, erosion and improve soil stabilization around the west and north sides of the Classroom Wing and Multipurpose/Gym. The site is plagued with weeds containing "goat heads" which the students frequently encounter - extensive remediation is needed. |
| Mike M. Sena Elementary | | | | | X | The Multipurpose/Gym building has issues with snow build-up along the north side of the building, which has damaged the exterior metal wall panels. Regrade the north end of the parking lot in this area to reduce snow build-up, repair exterior wall by constructing 42" concrete/ CMU retaining wall to prevent further damage. |
| Mike M. Sena Elementary | | | | | х | Repair cracks and resurface site access road and upper and lower parking lots, restripe, install parking bumpers and provide ADA signage. Regrade access road from upper parking lot to lower lot, compact and add additional gravel. |
| Mike M. Sena Elementary | | X | | | | Replace spalled concrete at the main entry and replace concrete ramp from parking lot to building to meet ADA compliance. Replace spalled concrete sidewalks on the north side of the building and replace broken stoop at south exit doors from classroom wing. |
| Mike M. Sena Elementary | | Х | | | | Replace fencing around existing propane tank to be more secure and provide access gate. |
| Mike M. Sena Elementary | | Х | | | | Replace playground equipment and provide ADA access |
| Mike M. Sena Elementary | | Х | | | | Regrade drainage swale along the north side of the classroom wing |
| Mike M. Sena Elementary | | | | | Х | Replace spalled concrete at outdoor basketball courts and replace broken goal posts. |
| Mike M. Sena Elementary | | | | | Х | Reset all splashblocks to be above grade under downspouts. Set on gravel base course |
| Mike M. Sena Elementary | | | | | Х | Remove existing exterior paint (peeling), reseal and paint exterior CMU and trim. |
| Mike M. Sena Elementary | | | | | Х | Re-caulk all vertical joints, around wall openings and misc. wall penetrations. |
| Mike M. Sena Elementary | | | | | Х | Replace exterior windows in the main classroom wing including blinds |
| Mike M. Sena Elementary | | | | | Х | Replace dormer windows in Multi-Purpose with insulated translucent window panel system. |
| Mike M. Sena Elementary | | | | | Х | Replace all exterior doors, frames and hardware |
| Mike M. Sena Elementary | | | | | Х | Replace all exterior building lighting - LED |
| Mike M. Sena Elementary | | | | | Х | Construct secure entry vestibule at south end of the building to improve overall facility security. |
| Mike M. Sena Elementary | | | | | Х | Replace casework in all classrooms, administration office and teachers lounge - original in place |
| Mike M. Sena Elementary | | | | | Х | Replace all corridor drinking fountains provide wing walls if required to meet ADA requirements |

| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|--|---------------------------|-------------------------------|----------------------------------|-----------------------------|------------------------------|---|
| Mike M. Sena Elementary | | | | | Х | Repaint entire interior. |
| Mike M. Sena Elementary | | | | Х | | Replace classroom chalkboards with Smart-Boards |
| Mike M. Sena Elementary | | | | | X | Remove VCT in the classrooms, corridors, portion of the multipurpose/ gym and restrooms, repair areas of damage and polish concrete. |
| Mike M. Sena Elementary | | | | | Х | Replace carpet with carpet tile in all offices and in Kindergarten classroom. |
| Mike M. Sena Elementary | | | | | Х | Install acoustic wall panels in Multi-Purpose for sound control |
| Mike M. Sena Elementary | | | | | Х | Replace rubber flooring in Multi-Purpose Replace interior lighting throughout to LED, upgrade all emergency |
| Mike M. Sena Elementary | | | | | Х | back-up and exit lighting |
| Mike M. Sena Elementary | | | | | Х | Install new suspended ceiling system in all classrooms |
| Mike M. Sena Elementary | | | | | х | Renovate Kitchen in it's entirety: reconfigure for efficiency and replace all equipment including plumbing and appropriate ventilation hoods. Inspect water/ sewer lines and replace as part of kitchen renovation as required. |
| Mike M. Sena Elementary | | | | | Х | Renovate restrooms near Multi-Purpose/ Gym in their entirety (flooring, finishes, plumbing, fixtures, lighting, partitions, accessories and ventilation) and comply with all ADA requirements. Inspect water/ sewer lines and replace as part of all restroom renovations. In the restrooms located the classroom wing remove VCT flooring and polish concrete and replace countertops and sinks. |
| Mike M. Sena Elementary | | | | | Х | Replace Janitor mop sinks and surrounds in all custodial closets |
| Mike M. Sena Elementary | | | | | Х | Replace intercom system throughout Install new DDC system for HVAC, and test and balance ALL |
| Mike M. Sena Elementary Mike M. Sena Elementary | | | | | X | equipment. Install fire sprinkler system throughout the entire building to meet CURRENT NM IEBC Code Requirements. May require booster pump and storage tank |
| Mike M. Sena Elementary | | | | | Х | Install security camera system (interior/exterior) and connect to central monitoring system. |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Capital Improvement Costs: Mike Mateo Sena Elementary

The costs below are based on the needed facility upgrades and repairs, and are based on industry standard unit rates (based on 2016 costs) for budgeting purposes for the district.

| Las Vegas City Schools | | Rev 11-09-16 | MACC S | 1,743,653 |

Facility Description

Mike Mateo Sena Elementary School is located on Route 518 in Las Vegas, New Mexico, and falls within the Las Vegas City School District. It is a 1-story campus that houses kindergarten through 5th grade students and a staff of approx 16. The campus is made up of one building. Originally constructed in 1956, there has been one addition. There are two portable facilities on site. To accurately capture repair costs, the complex is split into two assessments (1956 Building and 1995 Addition).

of 26 (3 are handicap spaces). Paved areas require surface with signs of standing water. Site: The site is approximately 10 acres and includes a playground and a hard surface play area. The school has a parking cap improvements. Concrete sidewalks are in fair condition. Landscaped areas include grass and are not irrigated. Site drainage it

Roofs are modified mt. The structural system uses CMU and wood trusses. aluminum frames nage or settlemen Structural/ Exterior Closure: The building rests on spread footing foundations that are showing no signs of bitumen and metal and they are not leaking. The exterior doors are metal and windows are oper

condition. Ceilings include painted drywall and fiberboard. Flooring in high use areas Interiors: Partition wall types include painted CMU and painted drywall. Interior wall vinyl composition tile, while rooms have carpet. Interior doors are solid wood.

s not have a cooling system. The heating distribution system is by underground ducts. Fresh quate. The plumbing fixtures and piping are original Mechanical/Plumbing: Heating for the building is supplied by gassent, but b supplied through windows. Exhaust fans are

lergency lighting with battery back-up is in corridors and emergency exit signs are typically illuminated. The facility does not have an emergency 208 V., 1-phase, 4-wire power via a 200 amp main panel. Branch circuits within rooms are 120/208 V. Lighting is fluorescent r finat delive Electrical: The electrical system is fed from a transform and illumination is inadequate due to fixture spaci generator

Fire Protection/Life Safety Systems/ Accessibility. The fire alarm system consists of annunciators in corridors and other public spaces. The system is activated by pull stations, and it is not centrally monitored. The building does not have a fire sprinker system. Egress corridors have appropriate fire separation, but interior doors on escape corridors are not fire rated. The security system is comprised of motion detectors. The complexes not handicap compliant. Requirements include hardware upgrades and ramps.

eparate bus and student drop-off areas and missing kitchen equipment. Access is not safe due to a lack of dedicated drop-off areas; parking is adequate when considering dirt nave a two-way public address system; classrooms do have data ports, but classrooms do not have CATV. Educational Adequacy: Mike Majed Sena Elementary School generally meets the state general adequacy requirements. The gross square foolage is adequate for the current enrollment. Adequacy deficiencies include no sepa areas. The school does

2003 Update: Mike Mateo Sena ES completed a \$185,925 project, on district wide DCU project 03-199, to upgrade fire alarms, intercom, windows, and HVAC systems

Comments Section

Roadway/Parking

Parking area in need of restriping and repairs, top surface showing cracks and deterioration. Limited signage in place with no Handicap signage in place. One faded handicap parking place on the top parking lot. Ramp from parking lot to main entrance has tripping hazards due to raised concrete edges. This is used for handicap access.

Site Utilities

Propane storage tanks have fence barrier in place and secure. Upright electrical box on the West side of the building needs to be reattached, possible safety hazard. East side utilities have fence barrier in place.

Playgrounds/Athletic Fields

Impact surface/material in place (pea gravel). Newer style playground equipment in place and in fair to good condition. District has scheduled for the entire playground complex to be reworked with new edging, impact material and consolidation of equipment. Walkways to be installed at this time. Current conditions show missing edging, poor impact surface areas and possible safety issue from semi-buried railroad ties being used for edging.

Site Drainage

Roof Drip edge in place but water is not being moved away from the East side of the building due to blocked drainage pipe running under the main entrance ramp. The East side of the building has natural down slope contour moving water away from the building. No gutters, down spouts being used due to pitched roof design.

Sidewalks

Major safety concern due to raised edges/missing concrete on the main entrance ramp from the parking lot, heavy spalling on the concrete walkways at both entrances to the building along with pitting and cracks. Major Drop off from entrance/exit ramps to ground level possible safety issue (tripping/falling).

Grounds

The grounds are a mix of trees, grass, weeds. Spring cleanup is scheduled by the district. No trash or graffiti found during the site survey. Fences (5 strain barbwire) and gates in place. No graffiti or vandalism found.

Windows/Caulking

Newer windows in place with screens. No damaged window seals or broken window panes. Several windows around the campus do not open or have damaged tracks needing repair or replacement to allow proper operation. Locking hardware in place.

Walls/Finishes

The main building is CMU block that is painted and in poor condition due to peeling paint. The gym has metal siding with pitched metal roof. The lower sections of the gym building are starting to show deterioration and rusting due to water not being moved away from the building.

Entry/Exterior Doors

The main entry/exit doors have panic bars in place along with door seals. No broken or missing glass panels. Security device in place and working as designed. A major safety concern regarding double exit doors chained shut along with a major drop off from the exit ramp in this area.

Roof/Flashing/Gutters

The roof on the main building is pitched white TPO with walk mats in place. The roof on the gym is pitched metal. No gutters in place on either building. Flashing in place and secure. No damaged ceiling tile on the interior of the building.

Walls/Floors/Ceilings/Stairs

The interior of the building is clean and maintained. Walls are painted, ceiling tile in place with no water damage. VCT in the hallways needing waxing (scheduled for summer break). Several VCT floor tile missing in the main gym and kitchen area needing to be replaced. Carpet cleaned and maintained. No stairs in this building.

Interior Doors

Interior doors in place with all hardware, locking and latching working as designed. Door seals in place. No broken glass panels found during the survey.

Restrooms

Overall condition of the restrooms are clean and maintained. Trash cans in place along with toiletry devices. No hot water in the hand wash sinks in the R/R. Several of the sink fixtures not working in the Boys & Girls R/R. Stalls in fair to good conditions with all hardware in place and working. One overhead light not working in the girls R/R. Fixtures tested for proper operation.

Housekeeping

Equipment available to the custodian for carpet cleaning and VCT floor waxing. Trash cans in place both on the interior/exterior of the school. Interior dusting needed on the window sills. Chemical storage cabinet in place. Custodian area organized and maintained. No MSDS books available. R/R clean and maintained.

Elecrical Distribution

Electrical panels locked and secure with hazard labels in place. Storage items need to me moved to allow access to several electrical panels in the equipment room. Exterior electrical distribution panels locked and secure with fence barrier in place.

Lighting

Interior/exterior lighting in place. Newer LED lights on the exterior of the building. Interior light fixtures in place with several fixtures needing bulbs replaced in the main gym, girls R/R near the kitchen area and in the storage room. Emergency lights in place and several tested for proper operation.

Fire Protection Systems

The main fire panel found in normal status. Drop boxes in place along with emergency lights and exit signs. One major concern is the double exit doors on the East side being chained shut. Doors were open during the site survey but safety concern with the concrete pad drop off. Fire suppression system in the kitchen area with current cert. Fire extinguishers in place with current certification date. Fire lane open and clear.

Equipment Rooms

Equipment rooms needing to be reorganized and removal of equipment from around the electrical panels.

Heating/Cooling/Ventilation

RTU in place supplying heat into the building and wall mounted A/C units in the interior of the building. Exhaust fans working in the R/R and in the kitchen area. Filters on the interior wall mounted units need to be cleaned. Walking pads in place on the main building around the RTU.

Air Filters

Filters on the interior wall units dirty in need of cleaning due to buildup of material on the filter screens.

Kitchen Equipment/Refrig

The kitchen area is clean and maintained. Fire suppression system in place with current inspection date. Storage items organized and maintained. Refrigerators and Upright freezer working at proper temp.

Plumbing/Water Heaters

Hot water heater in place. No hot water to the hand wash sinks in the Boys/Girls restroom. Plumbing labeled and secure. No eye wash station at this ES.

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year Paul D Henry Elementary will be closed and all 1st-5th grade students will be split according to grade level between Los Ninos and Sierra Vista Elementary Schools. All existing 5th graders (2016/17) will transition to 6th grade at Sierra Vista Elementary and not to the middle school. *This facility has been identified for decommissioning and demolition.*

Facility Notes and Comments:

Paul D. Henry Elementary is located just southeast of Robertson High School at 1104 3rd Street and serves grades 1st-5th grade. The school was originally constructed in 1954 with additions in 1968, 1969, 1970 and 1996 that have resulted in 30,442 SF of permanent space. The facility layout is a classic L-shape design with double-loaded corridors and due to the extensive structural issues is in need of replacement. As part of the district's approved "right sizing" plan, the district intends to close this facility effective the 2017/18 school year and relocate students to either Los Ninos or Sierra Vista Elementary Schools. This facility has been identified for demolition and the property will be retained by the school district and re-purposed for use by the high school.

Site:

The 3.17-acre site is located at the corner of 3rd Street and Baca Avenue. Across from the school on Baca Avenue and 2nd Street are residential properties and bordering the site, Robertson High School Football Stadium is located to the north of the site, and Calvary Baptist Church is located directly across the street from the school to the west. Traffic is light to moderate along Baca Avenue; however it gets congested as it is used prior to the start of school and at dismissal by parents for drop off and pick up of students. The bus drop-off/ pick up lane located to the east along 2nd Street. Parking for staff and visitors is very limited as there are only 8 parking spaces available along Baca Avenue, which requires vehicles to back-out into traffic. The Calvary Baptist Church shares its parking area with the school during school hours, as there is no other parking on site available.

The existing facility sits below street level and is accessed via concrete steps or a concrete ramp that have hand and guard rails that are not code compliant. The concrete steps and sidewalks throughout the campus are spalled and cracked in multiple locations creating tripping hazards. Along the south side of the site is a concrete retaining wall that extends from east to west which is in very poor condition and in some areas it is completely coming apart and the exposed concrete behind the brick veneer is also deteriorating.

Overall site drainage is poor and needs to be corrected, however part of the site drainage issues that Paul D. Henry Elementary is experiencing are off-site drainage problems along Baca Avenue and 3rd Street that need to be corrected by the City of Las Vegas as well as surrounding sidewalks. The site is fenced and has areas that need to be replaced along the north and west sides. The playground equipment is in good to fair condition, with most of it having been replaced within the past 10 years. The play-fields along the north and east side are in need of weed treatment as there is a problem with "goat-heads" injuring students.

Structural/Exterior Closure:

Paul D. Henry Elementary was originally constructed in 1954, the foundation is a slab on grade and continuous footings with spread footings at concentrated load areas. There is a pipe trench originally constructed that is located along outside walls and down corridors that currently does not appear to be in service. The building is experiencing severe settlement in several areas and the district recently had Chavez-Grieves Consulting Engineers complete a structural

NEEDS TEXT!

Replace all broken/spalled concrete

Grading & drainage improvements needed

Replace retaining wall

Rework drainage to move water away from building

assessment report for this facility that identifies multiple areas of repairs and reinforcement needed from the foundation, to the exterior walls and to the roof diaphragm. The remainder of the structure consists of steel columns and joists and metal decking form the roof structure system. The exterior walls consist of CMU with brick veneer, which is in need of repairs as there are many areas of severe deterioration or where bricks are missing, joint maintenance and tuck-pointing. Below the window units are concrete walls that have been painted, which are also deteriorating. The roof consists of a single-ply TPO membrane roof system that was replaced about 10 years ago and metal standing seam roof system over the library that is the original roof from 1996 that needs to be replaced. There continues to be active leaks throughout the facility during wet weather events. The roof soffits and flashings are deteriorated in several areas, and need to be replaced along with new gutters, downspouts and splash-blocks need to be installed.

Exterior doors and frames are hollow metal; doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors. Exterior doors are in fair to poor condition and lack both vestibules and automatic door openers, which are needed at strategic locations to meet accessibility requirements and to improve the school's security. The exterior window system is combination of aluminum double paned, operable, and fixed window systems which are also in need of replacement as many of the seals are broken throughout.

Interiors:

The interior walls consist of a combination of painted CMU block and wood stud framing with gypsum board that is painted. There are multiple areas where the structural settlement has damaged the interior floor slab, walls, and ceilings that need to be repaired as part of any renovation effort. The flooring throughout is a combination of carpet or vinyl composition tile in offices, classrooms and the library, which is in poor condition with areas where the seams are coming apart or the carpet is coming unglued. The gym flooring is rubber solid surface and is in fair condition The interior doors are solid core wood and some have vision panels in the door, with hollow metal door frames are. Ceilings in classrooms, corridors and offices are a mixture of standard 2x4 lay-in acoustical tile and 12" x12'", that may contain asbestos.

The layout of the school is disjointed and does not allow for good supervision of corridors, which is a security concern. Classrooms throughout are dated, have worn finishes, poor lighting, and need major renovation. All restrooms are in need of major replacement/renovation and ADA improvements. Staff and faculty areas are inadequate in size, and the nurse's office is too small to meet the needs of the current enrollment. The school does not have a secure entry as the administration office is very small and awkwardly arranged near the main entrance.

Mechanical/Plumbing:

Heating for the facility is provided through a boiler system that was last replaced in 1995, and has problems being able to maintain a consistent temperature throughout and requires constant maintenance. There are two air handlers in

Replace VCT flooring

Settlement cracks at NE classroom wing

Replace water fountains

Renovate all classrooms

Structural repairs needed in multi-purpose

place to help deliver fresh air to the facility that are inadequate. The boiler is connected to a direct digital control system that is monitored by maintenance. The facility does not have a cooling system in place, and during the late spring and summer months it can get very hot in the classrooms. The exhaust fans in the restrooms require replacement, as they are minimally operable and do not provide adequate ventilation, sewer smells were present in the restrooms next to the Multi-Purpose Room and the restrooms in the library are no longer working because of sewer problems. All of the water heaters are more than 15 years old and are in need of replacement.

Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed. District has reported issues with the existing water and sewer lines, which will require upgrading/replacement as part of any renovation project.

Electrical:

The electrical system is fed from a 167KVA pole mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. If the facility undergoes a major renovation, it will require upgrading to support a facility replacement, the facility is also in need of a secondary service upgrade throughout as there are several areas that have the original electrical panels with glass fuses. In one of the mechanical room there is a sump pump with standing water that is covered with a metal grate and is directly below a an electrical panel near the library. Many classrooms have outlets that do not work or enough available to meet technology needs, and teachers utilize power strips and extension cords to have power where they need it. Either surface mounted, pendent or 2X4 lay-in fluorescent light fixtures provide lighting throughout the facility, with many being the original light fixtures from the 1950's. Lighting is in fair to poor condition and requires a complete upgrade including new wiring in many areas. Emergency lighting and exit signage has been provided with backup systems, there were several exit signs that appeared to be inoperable and need to be replaced.

Replace boiler system

Upgrade & use to new code requirements

Electrical systems upgrade needed and to be secured

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system consists of audible and visual annunciators throughout the building. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, with security cameras in strategic areas to be installed to better monitor the building. Overall, the facility only meets the minimal ADA requirements and requires improved access to the facility, interior door hardware upgrades, access, restroom renovations, and additional access/ accommodation in public areas.

FMAR's:

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. As this school site has been identified for closure at the end of the 2016/17 school year, all major findings unless related to immediate life, health, safety corrections will not be completed. As for the minor findings, only items that have a direct mission critical impact will be corrected.

Clean drainage channel

Remove loose paint at concrete panels, reseal & repaint

Replace metal roofing/ flashings

Replace all damaged brick & tuck point

Install missing splash blocks

Structural settlement - various locations

Replace carpet

Stabilize & repair structural cracks

Upgrade lighting

Structural repairs in corridors

Replace furnace & water heater

Extensive wall cracks in gym

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | | | 2017 GO | Other | Future GO | |
|--|---------------------------|-------------------------------|-----------------------|--------------------|-----------------|---|
| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | Bond Project Funds | Funding Options | Bond Project | Facility Deficiencies & Needs |
| Paul D. Henry Elementary | | | Х | | | FACILITY IS TO BE CLOSED AS OF THE 2017/18 SCHOOL YEAR AND HAS BEEN IDENTIFIED FOR DEMOLITION |
| Paul D. Henry Elementary | Completed | | | | | Structural Investigation: To determine extent of repairs and stabilization required - Multiple areas are experiencing significant visible settlement. |
| Paul D. Henry Elementary | х | | | | | Replace broken glass at exterior window in girls restroom |
| Paul D. Henry Elementary | Х | - | | | | Provide additional cooling for storage room containing IT Server Replace non-working exit sign at corridor exterior exit from kitchen and at north exit near 2-classroom addition. Install exit sign at |
| Paul D. Henry Elementary Paul D. Henry Elementary | X | | | | | northeast library door to exterior. SIGNIFICANT STRUCTURAL REPAIRS NEEDED OR REPLACEMENT OF FACILITY. Structural Repairs: Repair facility according to recommendations contained in the building's structural report to include extensive site drainage improvements, foundation repairs and stabilization of the building, and possible hazardous material remediation. |
| Paul D. Henry Elementary | | - | | | | Replace portion of damaged retaining wall and steps on west and south sides of building and replace handrails. |
| Paul D. Henry Elementary | | | | | | Replace broken/ spalled concrete sidewalks around building and at entry ways Multiple locations - extensive work required. |
| Paul D. Henry Elementary | | | | | | Grading and drainage improvements needed to provide positive drainage away from the building and reduce undermining of adjacent sidewalks. (Whole perimeter - may require installation of french drain and other remediation options) The site is plagued with weeds containing "goat heads" which the students frequently encounter - extensive remediation is needed. |
| Paul D. Henry Elementary | | | | | | Insufficient parking on site: visitors and some staff have use church parking area across the street. Need to consider usage of the east portion of the existing site for potential parent drop/ pick-up area and additional on site parking. |
| Paul D. Henry Elementary | | | | | | Repair existing cracks, resurface and restripe existing parking area on south side of the building. |
| Paul D. Henry Elementary | | - | | | | Playground improvements include equipment, outdoor play areas and shade structure. Clean and tuck point exterior masonry, re-caulk all vertical joints, |
| Paul D. Henry Elementary | | - | | | | around wall openings and misc. wall penetrations. Replace areas of damaged/ crumbling brick - multiple areas. |
| Paul D. Henry Elementary | | - | | | | Sand, primer and repaint all exterior metals including columns, flashing, trim, misc. framing and handrails. |
| Paul D. Henry Elementary | | _ | | | | Remove existing paint on concrete above and below all exterior windows, reseal and paint. |
| Paul D. Henry Elementary | | | | | | Roofing: Replace TPO roofing system including all fascia, flashing, copings, gutters, downspouts with splashblocks. (Roof was replaced ~10 years ago and may still be covered under warranty - Verify with Chris) |
| | | - | | | | , |
| Paul D. Henry Elementary Paul D. Henry Elementary | | | | | | Replace all exterior doors, frames and hardware Replace exterior windows including clerestory windows in gym and blinds. |
| Paul D. Henry Elementary | | | | | | Replace all exterior building lighting - LED |
| Paul D. Henry Elementary | | | | | | Upgrade primary and secondary electrical service. |
| Paul D. Henry Elementary | | | | | | Existing exterior electrical service has been vandalized and box needs repairs. |

| | Maintenance | 2013 GO Bond | 2017 GO Bond Project | Other Funding | Future GO Bond | |
|---------------------------|-------------|---------------|-------------------------|------------------|-------------------|---|
| School Facility/ Building | Work Order | Project Funds | Funds | Options | Project | Relocate electrical panels and shut-off boxes in mechanical room that |
| Paul D. Henry Elementary | | | | | | are located over open trench containing drainage water. |
| | | | | | | Remove northeast classroom addition in it's entirety, and restore existing exit-way from corridor and install new doors, frames and |
| Paul D. Henry Elementary | | - | | | | hardware |
| Paul D. Henry Elementary | | | | | | Replace casework in all classrooms - original in place |
| Paul D. Henry Elementary | | | | | | Test for hazardous materials: Possible ACM (flooring, wall base, ceilings, insulation, mastic, etc.) and lead paint. |
| | | | | | | Renovate restrooms in their entirety (flooring, finishes, plumbing, fixtures, lighting, partitions, accessories and ventilation) and comply with all ADA requirements. Inspect water/ sewer lines and replace as |
| Paul D. Henry Elementary | | | | | | part of all restroom renovations. Replace all corridor drinking fountains provide wing walls if required to |
| Paul D. Henry Elementary | | | | | | meet ADA requirements |
| Paul D. Henry Elementary | | | | | | Replace interior doors, frames and hardware |
| Paul D. Henry Elementary | | | | | | Repaint entire interior. |
| Paul D. Henry Elementary | | | | | | Replace classroom chalkboards with Smart-Board |
| D 10 II 51 | | | | | | Remove VCT in the classrooms, corridor and restrooms, repair areas |
| Paul D. Henry Elementary | | - | | | | of damage and polish concrete. |
| Paul D. Henry Elementary | | - | | | | Replace rubber flooring in the Multi-Purpose/ Gym |
| Paul D. Henry Elementary | | | | | | Replace mop-sink and water heater in mechanical room |
| Paul D. Henry Elementary | | | | | | Replace HVAC System in its entirety - Air flow throughout is very poor. |
| Paul D. Henry Elementary | | | | | | Install new DDC system for HVAC, and test and balance ALL equipment. |
| Paul D. Henry Elementary | | | | | | Replace interior lighting throughout to LED, upgrade all emergency back-up and exit lighting |
| Paul D. Henry Elementary | | | | | | Building Security: Reconfigure administrative office including adequate nurse's office to meet NMAS at main entry lobby and install secondary set of doors to classroom corridor with magnetic locks. |
| Paul D. Henry Elementary | | | | | | Renovate Warming Kitchen in it's entirety: reconfigure for efficiency and replace all equipment including plumbing and appropriate ventilation hoods. Inspect water/ sewer lines and replace as part of kitchen renovation as required. |
| David D. Hanny Flamentony | | | | | | Renovate Multipurpose Gym: Flooring, lighting, interior finishes, acoustical wall treatment for sound and furnishings to meet programmatic need. Provide additional egress as required by NMIEBC |
| Paul D. Henry Elementary | | | | | | requirements. |
| Paul D. Henry Elementary | | | | | | Renovate Library: Flooring, lighting, interior finishes, and furnishings. |
| Paul D. Henry Elementary | | | | | | Install fire sprinkler system throughout the entire building to meet CURRENT NM IEBC Code Requirements. |
| Paul D. Henry Elementary | | | | | | Install security camera system (interior/exterior) and connect to central monitoring system. |

Capital Improvement Costs:

The costs below are for demolition of this facility based on the approved Board of Education's "Right Sizing Plan" that will consolidate the students from this facility into other schools that have excess capacity in the district. The costs that have been identified on the following page identify the costs for facility improvements needed if this facility were to be retained for educational purposes for budgeting purposes.

| Las Vegas City Schools | | Revised 2-16-17 | MACC | \$ 637,704 |

Executive Summary Report

School: Paul D. Henry ES District: Las Vegas City

School ID:

Facility Description

Paul D. Henry Elementary School is located in Las Vegas City, New Mexico on 1104 3rd Street and falls within the Las Vegas City Public Schools District. The 1-story campus contains 32,591 SF of permanent building. Orcupancy is 179 kindergarten through fifth grade students and a staff of 34. The campus is made up of 1 building. Orcupancy is 179 kindergarten through fifth grade students and a staff of 34. The campus is made up of 1 building. Orcupancy is 179 kindergarten through fifth grade students and a staff of 34. The campus is made up of 1 building. Orcupancy is 179 kindergarten through fifth grade students and a staff of 34. The campus is made up of 1 building. Orcupancy is 179 kindergarten in 1954, there has been one addition. accurately capture repair costs, the complex was assessed as two permanent buildings

Site: The site is 3.17 acres and includes an athletic field (with no grass) and playground area. The school has a parking capacity of 58 (6 are handicap spaces). All paved areas are in fair condition and pose some hazard. Landscape areas include partial grass and trees, that are irrigated. Site drainage is generally require minor improvements. Concrete sidewalks are in fair to poor condition and pose some hazard. Landscape areas include partial grass and trees, that are irrigated. Site drainage is generally

Structural/Exterior Closure: The building rests on spread footing and slab-on-grade foundations that are showing signs of settlement and damage. The built-up, single-ply roof was replaced in 1996 and Exterior doors are steel, and windows are operable, double-pane units with aluminum frames. is not leaking.

Interior: Partition wall types are painted concrete block, plaster, and drywall. The facility was last painted in 1996. Most cellings are original 12"x12" glue-on-tile; some locations have recent 2'x4' lay-in acoustical ceiling tile. Flooring in high use areas is viryl composite tile. Most other flooring is carpet. Interior doors are solid wood.

Mechanical/Plumbing: Heating is supplied by natural gas-fired boiler and supplemental rooftop corridor beafers. There is no cooling in classrooms or offices except for evaporative cooling in the gym and kitchen. The heating distribution system is 2-pipe and ductwork for ventilation/heating. Fresh ajr/s supplied by exterior wall venting and rooftop air intake. Ceiling mounted exhaust fans are present. and bathroom ventilation is adequate. Plumbing fixtures are mostly original.

Electrical: The electrical system is fed from a 167 kVA pole-mounted transformer that delivers 120/240V, 3-phase, 4-wire power via a 600 amp main panel. Lighting is fluorescent and illumination is adequate. Emergency lighting (with battery back-up) is in corridors and emergepcy exit signs are typically illuminated. The school has no emergency generator Fire Protection/Life Safety Systems/Accessibility: The fire alarm system consists of audible and visual enunciators in corridors, classrooms, and restrooms. The system is activated by pull stations, and is not centrally monitored. The building does not have a fire sprinkler system. Egress corridors have appropriate fire separation and interior doors on escape corridors are fire-rated. The security system is not monitored. The complex is not handicap compliant.

DCU 03-199: Fire Alarm/Intercom, HVAC Electrical, & other improvements

Comments Section

Roadway/Parking

Very small area for parking. Top surface with heavy spalling. Stripping and signage needed in this area. Not sure if this is maintained by the city of Las Vegas. Recommend review.

Site Utilities

Site utilities in place with barriers. One disconnect box needing to be secured on the South side of the school. Natural gas utilities on the East side of the building needing some type of barrier to prevent access to unit.

Playgrounds/Athletic Fields

Playground area using pea gravel for impact material. Weeds need to be removed. Drainage problem caused by heavy rains and blocked grates. Equipment is being maintained (Newer style).

Site Drainage

Problem with site drainage on the East side of the school entrance to the hallway/kitchen. District is working with the city to ID the drainage piping in this area. No splash blocks in place and gutters blocked needing removal of debris.

Sidewalks

Walkways have heavy spalling due to the top concrete surface deterioration. ADA ramp in place with handrails. Exterior steps starting to show deterioration with possible tripping hazards.

Grounds

Grounds are a mix of grass, trees and shrubs. Weeds needing to be removed along with trimming of shrubs around the library addition. Fence and gates in place and maintained. No graffiti found.

Windows/Caulking

Windows are a mix of fixed and operational windows. Windows do not seal. Several have broken window seals along with one window damaged with broken glass on the South side of the building. Windows hard to open and keep open.

Walls/Finishes

The exterior of the building is brick façade starting to develop cracks. CMU block on the interior walls showing settlement cracks. Suggest that the district conduct structural engineer study.

Entry/Exterior Doors

Several exterior doors showing deterioration of the frames to age and rust. Newer door locks not working in need of repair. Exit doors have panic bars in place.

Roof/Flashing/Gutters

The roof is flat white TPO and pitched metal room on the library. Gutters are blocked with debris and weeds needing removal. Several areas need to be reattached and sealed on the gutter seams. Down spouts in place.

Walls/Floors/Ceilings/Stairs

The interior floors are a mix of VCT and carpet. Several classroom with carpet need to be stretched to prevent tripping hazard. Ceiling are a mix of 12 X 12 and 2 X 4 ceiling tiles. VCT areas have been waxed, several areas have cracks and missing edges in the kitchen and main hallways.

Interior Doors

Interior doors replaced in 1996. No broken glass and hardware working as designed. All doors are fire rated. Door seals in place.

Restrooms

Restrooms have been remodeled with new fixtures. Partitions in place in good condition. Power hand dryers not working in the girls R/R. Light fixtures in place. Water in the Boy's main R/R needs to be turned on to provide water for hand washing. Fixtures tested for proper operation. R/R in Sped Classrooms not ADA compliant.

Housekeeping

Custodial closet maintained with storage items in place and organized. Equipment available for Custodian along with MSDS folders in place. Interior of the school is clean and maintained. Trashcans available both on the interior and exterior of the school campus.

Elecrical Distribution

2017 - 2022 Facility Master Plan • Las Vegas City Schools

SECTION 4.0 - SUPPORT INFORMATION

Electrical panels in place and labeled. One panel needing lower cover to prevent access. Switches, general outlets in place and working. No storage items around the electrical panels.

Lighting

Exterior/Interior light fixtures in place. One outside unit damaged with broken lens. Emergency lights in place except in the Library (?). No damage panels found.

Fire Protection Systems

The main fire panel showing normal status. Drop boxes in place along with fire extinguishers having current inspection date. Fire suppression system in the kitchen area. Sprinkler system only in the custodian area. Kitchen hood has current inspection sticker posted.

Equipment Rooms

One equipment room with water heater. Clean with no storage items around the water heater.

Heating/Cooling/Ventilation

Heating and cooling is provide by 3 RTU's replaced in 2011. District maintains this equipment. Appears to be working as designed. Long runs for heat to classrooms. Could not gain access on one area to view heating equipment near the library.

Air Filters

Two forced air units located on the Southeast side of the classroom wing. Units needing covers replaced. Filters needed.

Kitchen Equipment/Refrig

Kitchen equipment clean and maintained. Small area but being used as designed. Fire suppression in place. Ref. running at proper temp. Stove hood has current inspection posted. Hand wash sink has hot water.

Plumbing/Water Heaters

Hot water heaters providing hot water to hand wash sinks. Interior piping has arrow direction posted. No eye wash station in this school. Drinking fountains operational.

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year Sierra Vista Elementary School will begin its transition as a 4th-6th grade Elementary. All current 5th graders with the exception of MM Sena Elementary students will attend 6th grade at this location.

Facility Notes and Comments:

Sierra Vista Elementary is located in the north side of Las Vegas at 475 East Legion Drive. The school was originally constructed in 1986 and has not had any additions. The school facility consists of 49,848 SF of permanent space. This facility was originally constructed as an intermediate school to serve incoming students from the immediately adjacent primary school – Los Niños Elementary but within a few years was converted into a "traditional" elementary school that currently serves grades 1st-5th. As part of the district's approved "right sizing" plan, the district intends to re-purpose this facility effective the 2017/18 school year as the district's "main" intermediate school serving grades 4th-6th. This facility needs major renovation and facility improvements.

Site:

The school site is located northeastern part of the city, west of I-25 and consists of 26.77 acres that is also shared with the adjacent Los Niños Elementary. Based on the current facility locations, Sierra Vista Elementary utilizes approximately 15.02 acres of the north side of the site. The bus drop-off and pick-up access areas are shared by both schools, with each school having their own dedicated area. The site is located in a residential area that is bordered by public streets on three sides with adjacent open space areas. The site is easily accessed from either Mountain View or Legion Drives, both parking areas are limited in size and compete with the parent drop-off and pick-up areas. As part of the repurposing of both schools on site, additional parking and new parent drop-off and pick-up areas will be needed, as well as a new bus loop.

All paved areas are in fair condition and the main parking lot needs crack repairs and resealing. Concrete sidewalks around the building and on the north side of the site have several areas of spalled surfaces, settlement, and cracks due to tree roots and erosion that need to be replaced to prevent tripping. Site drainage around the building perimeter and overall site needs to be improved to help get water away from the building and reduce site erosion, as well as around the playground areas. Landscaped areas include grass areas and xeriscaping around the school, these areas are irrigated on a controlled sprinkler system where available or manually watered. The existing fencing around the complete site is in need of replacement. There are play fields on the northeastern portion of the site that are partially grassed but need reseeding and weed control/ prevention. The playground equipment is age appropriate and is in fair to good condition, needing only partial replacement; a shade structure over the main playground is also needed.

Structural/Exterior Closure:

Sierra Vista Elementary was originally constructed in 1986, with concrete footings and a slab-on grade foundation that appear to be showing signs of minimal settlement (primarily due to the age of the facilities); exterior concrete masonry walls, steel columns and joists and metal decking form the roof structure system. The exterior walls consist of a dark reddish CMU, which is in need of repairs, joint maintenance and tuck-pointing. The roof consists of a TPO single-ply membrane roof system that was replaced in 2005 and few small areas of standing seam metal roofing with metal soffit panels. There is a covered walk-way that connects this school to Los Niños Elementary on the south side

Concrete apron needed around building perimeter

Provide better signage at main entrance

Rework drainage to keep away from building

Trim landscaping away from building exterior

Replace roofing at covered walkway-East side

of the building that still has its original asphalt roofing installed and is in poor condition. The roof over the years has experienced multiple leaks, many of which have been coming from the facility's original skylights as well as areas that have had poor flashing maintenance on the roof. The facility has several large and small skylights that need replacement as they are also original and have had multiple issues with leaking.

Exterior doors and frames are hollow metal, doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors. There are several door frames that are experiencing rust and deterioration of frames along the north side of the building. Exterior doors are in fair to poor condition and lack both vestibules and automatic door openers, which are needed at strategic locations to meet accessibility requirements and to improve the school's security. Exterior windows are a combination of insulated casement type of operable units and non-operable units all of which need replacement. There are several windows that have metal security grating on them, a security evaluation is needed to determine if these grates would be needed in the future when the windows are replaced as they detract from the overall look of the school. In several locations glass block was installed to provide additional daylighting in several areas, in many places the glass block is either broken or are cracked, and needs replacement with an alternative type of translucent wall panel system to help maintain security.

The interior of the facility is a continuation of the reddish CMU block walls throughout with areas of and metal stud framing with gypsum board that is painted. The layout of the school is disjointed and does not allow for good supervision of corridors from a central location, which is a security concern. Classroom finishes and built-in casework are in fair condition as majority of the classrooms have the original casework from the original construction and is very worn. The interior door frames are hollow metal with solid wood doors, all classroom doors have vision panels located in the center.

The ceilings throughout are a combination of 2'x4' suspended acoustical panels and painted gypsum board are in fair to good condition. There are many areas throughout the building that need replacement ceiling tiles in areas that have had roof leaks and there are also multiple places where the gypsum board ceilings have been also damaged by leaks and needing repairs, especially around some of the skylights

Floor finishes throughout need replacement except for the school based health clinic on the northeast side of the building. Carpeting that is in fair to poor condition can be found in the corridors, administrative areas, group breakout areas, library, and classrooms; and vinyl composition tile (VCT) in some classrooms. The multi-purpose room has rubber flooring with play-court markings, and the kitchen and restrooms have ceramic tile floors and a 4' to 9' high wainscoting.

Replace glass block windows

Roof maintenance needed

Remove debris from roof drains

Replace all skylights. Many are broken

Regrade area near playground to eliminate drop-off

fact that the administrative offices are not located adjacent to the main entry is a security issue for the school. There is a bell/ camera system to allow entry to the building during school hours, however it does not prevent visitors from wandering off and not checking into the office. During the master plan process, it was identified that the existing administrative offices need be reconfigured to improve security and provide a secure entrance to the school.

All restrooms need major upgrades and renovation, as they are still in their original configuration, many fixtures are not operable, and are not ADA compliant. Restrooms located in the administration suite also do not meet ADA requirements and the doors cannot open fully due to the placement of the toilets. The kitchen is in fair condition and meets all NMAS requirements, however repairs/ upgrades are needed.

Mechanical/Plumbing:

The facility has a combination of a gas fired boiler system that was replaced in 2011, and roof top make-up air and evaporative cooling units all of which need replacement. While a temperature control system is in place to try and maintain a consistent temperature throughout, it is difficult to maintain proper cooling temperatures with the old equipment and humidity is often a problem. The exhaust fans in the restrooms require replacement, as they are minimally operable and do not provide adequate ventilation. All of the water heaters are between 15 and 20 years old and are also in need of replacement. Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed in every restroom. District has reported issues with the existing water and sewer lines, which will require upgrading/ replacement as part of any renovation project.

Electrical:

The electrical system is fed from a 300k VA pad mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. While the primary service appears to be sufficient, as part of any renovation effort this will need to be re-evaluated and may require a possible upgrade. The facility is in need of a secondary service upgrade throughout. Many classrooms have outlets that do not work or enough available to meet technology needs, and teachers utilize power strips and extension cords to have power where they need it. Either surface mounted, pendent or 2X4 lay-in fluorescent light fixtures provide lighting throughout the facility, with many being the original light fixtures from the 1980's. Lighting is in poor condition (interior/exterior), requires a complete upgrade, and may need to include new wiring in some areas, including in the interior courtyard area.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system consists of audible and visual annunciators throughout the building and needs to be replaced. The system is activated by pull stations, and is centrally monitored in the administrative office. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC – Level 3

Repair & resurface parking lot

Renovate all restrooms & comply with ADA

Replace casework throughout

Replace damaged/stained ceiling tiles

Remove all carpeting

Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is the original equipment and installed sporadic in terms of placement of emergency back-up wall packs and light fixtures, all of the equipment needs to be upgraded.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors. There are several exterior security cameras located in strategic areas but many of these are inoperable or broken. A complete new security camera system needs to installed. Overall, the facility only meets the minimal ADA requirements and requires improved access to the facility, several interior door hardware upgrades, facility access, restroom renovations, and additional access/accommodation in public areas.

FMAR's:

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. All major findings have been combined with additional deficiencies identified from the FMP facility assessments into larger capital improvement projects that have been prioritized in the district's Capital Improvement Plan. The minor findings in several areas have already been addressed and items that were not were also listed as maintenance repair needs were given to the LVCS Maintenance Department to be entered into School Dude and will become summer work projects.

Replace flooring & casework in all restrooms

Replace tile & install corner guards

Air handlers need to be upgraded

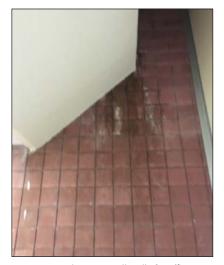

Replace cooling system

Repair sink & kitchen dishwasher & install j-box cover

Repair water damage at all walls & soffits

Install caulking at turn seams

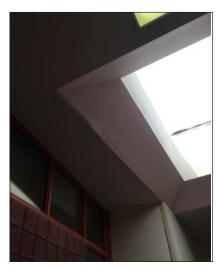

Patch & repair & paint damaged soffit at entrance

Reseal building perimeter at sidewalks

Replace all skylights

Repair water damage at all skylight wells

Replace all damaged wall tiles in kitchen

Fix locks/latches to kitchen panels

Repair ceilings in all restrooms

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | | | 2017 GO | Other | Future GO | |
|---------------------------|---------------------------|-------------------------------|-----------------------|-----------------|-----------------|--|
| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | Bond Project Funds | Funding Options | Bond Project | Facility Deficiencies & Needs |
| School Facility Building | Work Order | 1 Toject Tulius | Tullus | Ориона | Troject | Reset all splashblocks to be above grade under downspouts. Set on |
| Sierra Vista Elementary | Х | | | | | gravel base course |
| Sierra Vista Elementary | X | | | | | Clean debris out of the storm drain at the kitchen loading dock area |
| Sierra Vista Elementary | Х | | | | | Repair damaged soffits at main entry areas and repaint. |
| | | | | | | Multiple roof leaks near wall joints and skylights - WARRANTY REPAIRS (Leak areas include: near main entry, east vestibule and |
| Sierra Vista Elementary | Х | | | | | at skylights) |
| | | | | | | Roof Maintenance: Re-caulk all skylights, flashing and coping seams. Clean debris off of roof, from roof drains, gutters and |
| Sierra Vista Elementary | Х | | | | | downspouts. |
| | | | | | | |
| Sierra Vista Elementary | Х | | | | | Replace damaged/ stained ceiling tiles throughout - multiple locations |
| Sierra Vista Elementary | Х | | | | | Patch, repair and paint ceiling in girls restroom on south side of Library and in corridor in south classroom wing |
| | ., | | | | | Repair damage to walls underneath the dishwasher in the kitchen, |
| Sierra Vista Elementary | Х | | | | | repaint and install cover over open outlet box. |
| Sierra Vista Elementary | Х | | | | | Repair locks to electrical panels in the kitchen |
| Sierra Vista Elementary | Х | | | | | Replace broken wall tiles in the kitchen - multiple areas |
| Sierra Vista Elementary | Х | | | | | Install exit signage in the library. |
| | | | | | | Site drainage improvements needed to correct ponding, erosion and |
| | | | | | | improve soil stabilization around the entire building and all playfield structures. The site is also plagued with weeds containing "goat |
| | | | | | | heads" which the students frequently encounter - remediation is |
| | | | | | | needed. Add additional fill on the east side of the building between the concrete sidewalk and playground areas where there is a 8-12" |
| Sierra Vista Elementary | | | Χ | | | drop off. |
| | | | | | | Repair cracks, potholes, resurface asphalt and restripe parking lot including parent and bus drop lanes. Provide parking bumpers, ADA |
| Sierra Vista Elementary | | | Х | | | signage and paint curbs |
| Siorra Victa Flamontary | | | Х | | | Bus & Parent drop/pick up areas needs to be redesigned to improve traffic flow. (Partially shared with Los Niño's) |
| Sierra Vista Elementary | | | ٨ | | | tranic now. (Partially Shared with Los Ninos) |
| Sierra Vista Elementary | | | Х | | | Replace exterior site lighting - parking lot and campus |
| Sierra Vista Elementary | | | Х | | | Extend roof drains to get water away from the building, may require sidewalk trenches. |
| elena vieta Elementary | | | | | | ondown in dividuosi |
| Sierra Vista Elementary | | | Х | | | Improve site directional signage |
| Sierra Vista Elementary | | | Х | | | Replace playground equipment and provide shade structure. |
| Sierra Vista Elementary | | | Х | | | Replace damaged basketball goal posts at playground area |
| | | | | | | Replace heaving/ damaged sidewalk and ADA ramp at the northwest |
| Sierra Vista Elementary | | | Х | | | parking area/ entrance to the building. Replace spalled concrete sidewalks around the building - multiple |
| Sierra Vista Elementary | | | Х | | | locations. |
| Sierra Vista Elementary | | | Х | | | Construct trashbin enclosure for trash dumpster |
| , , , | | | | | | The covered walkway between the two classroom wings needs to be |
| | | | | | | repaired and re-roofed as it was not included in the previous roof project. There is also a small portion of the mechanical room |
| Sierra Vista Elementary | | | Χ | | | (eastside) that was also not re-roofed. |

| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs |
|---------------------------|---------------------------|-------------------------------|----------------------------------|-----------------------------|------------------------------|--|
| | | | ٧ | | | South covered walkway and sidewalk leading to Los Niño's Elementary requires repairs to the covered structure, re-stuccoing, and reroofing. The walkway/ ramp is not ADA compliant, there are multiple areas of cracked sidewalk including around support columns |
| Sierra Vista Elementary | | | Х | | | which and need to be evaluated and the sidewalk replaced. |
| Sierra Vista Elementary | | | Х | | | Replace old deteriorated benches and tables near playground |
| Sierra Vista Elementary | | | Х | | | Sand, primer and repaint all exterior metals including columns, flashing, trim, misc. framing and handrails. |
| Sierra Vista Elementary | | | Х | | | Clean and tuck-point CMU, re-caulk all vertical joints, around wall openings and misc. wall penetrations. Repair/ replace broken CMU. |
| Sierra Vista Elementary | | | Х | | | Repair damaged EIFS and recolor coat (multiple areas around building) |
| Sierra Vista Elementary | | | Х | | | Replace all exterior doors, frames and hardware. Multiple doors and frames are rusted, and deteriorated. |
| Sierra Vista Elementary | | | Х | | | Replace exterior window system in its entirety, including blinds. Replace glass block areas (which are all damaged/ broken) to be infilled with translucent wall panel system. Re-evaluate security bars on exterior windows with current egress requirements. |
| Sierra Vista Elementary | | | Х | | | Replace all skylights most have failed and are leaking - Install new translucent panel skylight system. 4x4 (16) 5x10 (12) and (1) 30'x6' barrel |
| Sierra Vista Elementary | | | Х | | | Replace all exterior building lighting - LED |
| Sierra Vista Elementary | | | Х | | | Building Security: Renovate/ reconfigure Administrative area for better functional use and improved building security, including nurse's office and restrooms for ADA compliance. |
| Sierra Vista Elementary | | | Х | | | Renovate kitchen: Reconfigure for efficiency and replace all equipment including plumbing and grease trap. Inspect water/ sewer lines and replace as part of kitchen renovation as required. |
| Sierra Vista Elementary | | | Х | | | Renovate Library: Flooring, lighting, interior finishes, and furnishings. |
| Sierra Vista Elementary | | | | | | Remove VCT in the classrooms and carpet in the corridors, polish |
| Sierra vista Elementary | | | Х | | | concrete. |
| Sierra Vista Elementary | | | Х | | | Repaint entire interior (Except SBHC area N206, N208 & N210) |
| Sierra Vista Elementary | | | Х | | | Replace casework in all classrooms |
| Sierra Vista Elementary | | | X | | | Replace carpet with carpet tile in all offices, small group breakout classrooms and specialty classroom spaces (Except SBHC area N206, N208 & N210) |
| Sierra Vista Elementary | | | Х | | | Renovate art classroom (S-111), provide hand wash and art sink and storage casework for art materials/ supplies. |
| Sierra Vista Elementary | | | X | | | Replace all drinking fountains throughout provide wing walls if required to meet ADA requirements |
| Sierra Vista Elementary | | | Х | | | Replace rubber flooring in Multi-Purpose |
| Sierra Vista Elementary | | | Х | | | Remove ceramic tile (including all broken) and entry mats and replace with new recessed mats and polished concrete - All entry areas |
| Sierra Vista Elementary | | | Х | | | Replace chalkboards with marker boards & Smartboards |
| Sierra Vista Elementary | | | Х | | | Sand, prime and repaint interior door frames, replace interior doors, hardware, and install new signage |
| Sierra Vista Elementary | | | Х | | | Install corner guards throughout to protect from future damage |

Executive Summary Report

District: Las Vegas City School: Sierra Vista ES

School ID: 0

Facility Description

and no portables. Occupancy is Kindergarten through fifth grade students and a staff of approx 30. District offices occupy 5 classrooms. NOTE: The space occupied by the district offices is not included Sierra Vista Elementary School is located in Las Vegas City, NM, at 475 Legion Drive, and falls within the Las Vegas City Public Schools District. The one-story campus contains permanent buildings in either the Campus' gross square footage or EA space. Originally constructed in 1988, there have been no additions. One permanent building assessment was conducted.

ang capacity of 93 (8 are handicap spaces). All paved areas require eas are irrigated. Site drainage is adequate but there is a Site: The immediate site is 26.77 acres and includes an athletic field, playground, and hard surface play area. The school has a no improvements. Concrete sidewalks are in good condition and pose no hazard. Landscaped areas include grass and treg history of flooding.

e or settlement. The building structural system uses concrete block, tal and windows are operable, double-pane units with aluminum frames. Structural/Exterior Closure: The building rests on spread footing and slab-on-grade foundations that he exte brick veneer, and steel structure. The modified bitumen roof is original and has minor leaks,

pair ed in 1000. Most ceilings have the original lay-in tile. Flooring in high use areas is vinyl ras las Interior: Partition wall types included painted concrete block and painted drywall. The facility oors are composition tile, while classrooms have carpet and vinyl composition tile. Interior

and rooftop evaporative coolers. The heating distribution system is a 2-pipe system and cooling and exterior windows. Exhaust fans are operable and bathroom ventiliation is generally adequate. The Mechanical/Plumbing: Heating and cooling for the building is supplied by a natural supplied through variable air volume boxes. Fresh air is supplied through outside plumbing fixtures and piping are original

bition is adequate. Emergency exit signs and lighting (with battery back-up) are in corridors and exit signs are typically illuminated. The facility has no Electrical: The electrical system is fearfrom a 30d KVa transformer that delivers 208 V., 3-phase, 4-wire power via a 1200 amp main panel. Branch circuits within rooms and corridors are original. Lighting is original fluorescent fixtures and illumination is adequate. Emergency exit signs and lighting (with battery back-up) are in corridors and exit signs are typically illuminated. The facility ha emergency generator for emergency lighting and critical system backup.

Fire Protection/Life Safety Systems/Accessionity: The fire alarm system consists of audible and visual annunciators in classrooms, corridors, and other public places. The system is activated by manual pull stations and smoke detectors and is not centrally monitored. The building does not have a fire sprinkler system. Egress corridors have appropriate fire separation and interior doors on escape corridors are fire rated. There is a security system comprised of motion sensors, which is linked to the local police department. The complex is handicap compliant

2003 Update

No major work and/or reprevations have been performed since the last assessment.

Comments Section

Roadway/Parking

Top surface starting to develop cracks. Some repairs have been made but cracks with weeds have developed. Yellow Paint peeling off of curb area. Signage in place along with ADA access ramp.

Site Utilities

Utilities locked and secure at the rear of the North wing along with power utilities locked and secure on the South side of the Cafeteria. The enclosure for the emergency generator is unlocked and needs to be secured.

Playgrounds/Athletic Fields

Playground impact material is pea gravel. Weeds have developed in this area needing to be removed. Impact material needed around the base fo the swing set and slides. Equipment secure. No edging around the playground equipment. Suggest that the impact material be replaced.

Site Drainage

Splash blocks in place along with grates. Water directed away from the building. North side wing has had water barrier installed on the CMU block below ground to prevent water from entry into the building.

Sidewalks

Some spalling on the West side of the main entrance to the school. One damage area at the courtyard entrance North side of the classroom wing. No tripping hazards or raised edges.

Grounds

Grounds have grass, trees and shrubs in place. Heavy weeds due to the afternoon rains the last several weeks. Schools starts on Monday, August 17, 2015, behind schedule on weed removal. On baskeball court with three baskets in place, some cracking of the concrete surface area.

Windows/Caulking

Exterior windows are a mix of fixed, operational and glass block inserts. The glass block inserts show heavy damage from vandalism needing replacement. Graffiti spray painted on one window on the North side of the South classroom wing. Hardware in place but screens are missing is several areas.

Walls/Finishes

CMU block construction with several areas needing holes filled in at the rear of the East classroom entrance areas where an outside water fountain has been removed.

Entry/Exterior Doors

Entry doors have door seals in place along with panic bars, locks, closers in place. No broken or damage glass found during the site survey.

Roof/Flashing/Gutters

The roof is white TPO and pitched metal roof in good condition. Roof drains need to have debris removed (PM in place per district). Damaged interior ceiling tile from either past or current leaks. Flashing in place and secure. Skylights secure and sealed, no broken lenses observed.

Walls/Floors/Ceilings/Stairs

Interior floors are a mix of VCT and carpet. The carpet in the main entrance leading to the gym/cafeteria needs to be stretched to remove tripping hazard. Damaged upper interior walls from roof leaks needing repair. VCT waxed and gym floor being waxed during the site survey.

Interior Doors

Several interior doors frames out of square causing doors not to close needing to be adjusted or frames replaced. Locks, latching and hardware in place and working as designed. Door seals in place.

Restrooms

Restrooms have toiletry in place along with trash cans both on the interior and exterior of the school. Fixtures tested for proper operation. Partitions in place and in good condition with hardware in place. Hot water to the North side R/R but not to the South side R/R. Light fixtures in place and working.

Housekeeping

Custodian closet organized and maintained. MSDS sheets available in one custodian closet. Equipment available for custodian usage and floors were being waxed during the site survey. Trash cans both on the interior and exterior of the school.

Elecrical Distribution

Electrical panels in place and labeled. One panel in the kitchen area in need of door lock on the Southwest area. Interior panels labeled and secure, clearance is being maintained around panels (3ft).

Lighting

The exterior lights on the South side of the kitchen left on during the day. Damaged lenses need to be replaced. Interior light bulbs needing replacement in several classrooms.

Fire Protection Systems

Main fire panel showing fault during the site survey needing to be reset and problem corrected. Fire Hydrant at the front of the school. Drop boxes in place and fire extinguishers have current inspection date. Fire suppression system in kitchen and fire blanket mounted on wall.

Equipment Rooms

The main mechanical room is clean and maintained. No storage items around equipment.

Heating/Cooling/Ventilation

RTU in place and maintained. One person maintains the systems in the district. Newer units installed in the lower mechanical room.

Air Filters

Not checked during the site survey.

Kitchen Equipment/Refrig

Kitchen area is clean and maintained. Fire suppression system in place and has current inspection date. Ref. & Freezer shut down and locked during summer break.

Plumbing/Water Heaters

Plumbing labeled and gages working. No eye wash stations at this school. No hot water to the sinks on the South side of the R/R. Hot water to the wash sinks in the kitchen. Hot water heaters in place and clear of storage items.

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 school year this facility will be closed and all 7th and 8th graders will attend the new 7th/8th Grade Academy at Robertson High School. *The main building has been identified for decommissioning and demolition and the gym will remain in use until the district can construct a new auxiliary gym at the RHS campus, once complete the gym will also be demolished.*

Facility Notes and Comments:

Memorial Middle School is located on the northwest side of Las Vegas at 947 Old National Road and serves 6th-8th grade. The school was originally constructed in 1970 with a single addition in 1994 that has resulted in 99,447 SF of permanent space. The school also utilizes one double-portable with 1,680additional square feet for athletic storage and as a changing area. As part of the district's approved "right sizing" plan, the district intends to close this facility effective the 2017/18 school year and relocate students incoming 7th and 8th grade students to the new 7th/8th Grade Academy at Robertson High School. The main building at this site has been identified for demolition, the gym will remain in use until an auxiliary gym is constructed at Robertson HS, and the property will be retained by the school district at this time.

Site:

The 35.4 -acre site is located along the north end of Old National Avenue in a primarily agricultural area with residential housing located to the east. The parent drop-off/ pick-up is accessed from Old National Avenue and loops around the school site. The bus drop-off/ pick-up is in front of the gym and is accessed from Legion Avenue through the main parking lot to the east. The main parking lot is in fair condition and is located on the southeast portion of the site and is large enough to accommodate the staff and visitors; overflow parking is located along the unimproved road edges of the parent pick-up lane or near the playfields located west of the gym. Access to the main entry is from the east parking lot, the access ramp between the sidewalk and asphalt is in poor condition, does not meet ADA requirements due to its location and condition and needs replacement. Sidewalks around the facility are in fair to poor condition as there are several areas of spalled surfaces and broken concrete. There is only minimal site fencing in place and additional is needed to help secure the site.

Memorial MS has one partially developed play-field with an unpaved track on the northwest side of the school that are in poor condition and is plagued by gophers. The is a developed baseball/ softball field just west of the gym that needs maintenance. The outdoor basketball court located just south of the gym are also in need of improvements from the basketball goals to the concrete court surface that has areas of cracking and spalling. The site is fairly level with a several areas that have drainage problems particularly in the area between the north side of the gym and the main building, where the drainage swale does not appear to have enough slope and creates ice dams between the two buildings. There are also drainage issues and evidence of soil erosion along the north and west sides of the main building.

Structural/Exterior Closure:

Memorial Middle School including the gym was originally constructed in 1970 and the band/choir room and library additions were constructed in 1994. The facility consists of concrete footings and a slab-on grade foundations that appear to be showing several areas of settlement throughout both the main and gym buildings. A structural evaluation was conducted in the Fall of 2016 and has identified specific repairs in both buildings that need to be done as part of a major renovation. The exterior wall structure for both buildings consists of CMU and steel stud framing with a traditional stucco system that needs repairs,

ADA access to the main entrance needs improvement

Site drainage issues between main building & gym

Regrade site & replace sidewalk. Provide under sidewalk roof draining

Repair stucco & recolor coat

Repair /replace broken downspout

new color coat and joint maintenance around all wall openings and along the building perimeter. There are three roof systems in place on both buildings – the original standing seam metal roofing at mechanical screens and façade areas, the original built-up asphalt roofing over the 1994 additions (31,982 SF) and a single-ply membrane roof system (TPO) that is mechanically attached that were replaced in 2005 (67,465 SF). Only the TPO roof system is in good condition and the remaining roof materials are in need of replacement. Both building roofs over the years have experienced multiple leaks, many of which have been coming from the facility's original skylights as well as areas that have had poor flashing maintenance on the roof. Roof ladders are missing in several areas to assist in transitioning the multiple roof levels or are in poor condition. The facility has several skylights that need replacement as they are also original, some are broken and have had multiple issues with leaking. All of the roofs need to have regular annual maintenance in removing tree pine needles and debris from the roof drains, gutters, and downspouts

Exterior doors and frames are hollow metal or wood; doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors. Exterior doors are in fair to poor condition and automatic door openers are needed at strategic locations to meet accessibility requirements and to improve the school's security. During one of the school's previous renovations, all of the exits doors were reduced from two doors down to one; not only reducing the path of egress but also creating security concerns as the vestibule areas are now difficult to monitor with the partition walls in place. The exterior windows are a combination of operable and fixed double pane window systems with insulated hollow aluminum frames that appear to be of residential grade at the main building, and the gym has the original hollow metal window system in place. All of the exterior windows need to be replaced with a commercial grade insulated window system.

Interiors:

The interior walls are a combination of painted CMU walls, and wood/ metal stud framed walls with painted gypsum board and are in fair condition; with many areas needing minor repairs and repainting, including installation of corner guards to reduce future damage. The interior hollow metal door frames need be repainted and the interior wood doors and hardware need to be replaced throughout out as many are damaged or do not meet ADA requirements.

The flooring throughout varies with a combination of vinyl composition tile or carpeting in the lobby area, corridors, and classrooms, and administrative offices. Both the carpeting and VCT flooring throughout needs to be replaced, consideration should be given to polished concrete flooring to help reduce overall building maintenance. The flooring in the restrooms is ceramic tile w/ ceramic tile wainscoting in the larger restrooms that needs to be replaced and sealed concrete in the mechanical/janitor rooms. The gym has a wood floor surface with integral play-court markings that was recently replaced in 2016 for safety

Replace broken/cracked sidewalks

Roof maintenance needed

Rooftop metal panels need replacement

Reconnect gas lines & test for leaks-multiple locations

Settlement occurring-see structural report. Reseal wall base around perimeter

reasons.

The ceilings throughout consist of two types: painted gypsum board, and multiple styles of either 2'x'2' or 2'x4' suspended ceiling tile systems. Stained ceiling tiles throughout are all miss-matched and stained from multiple roof leaks, a complete ceiling system upgrade is needed in both the main building and a portion of the cafeteria/ gym building as part of a larger renovation. There are also areas of gypsum board ceilings that have been damaged over the years from the multiple roof leaks that are still in need of repair and repainting,

Classrooms are spread out about the facility due to the poor design of the school, which does not provide for easy supervision of corridors; additional security cameras are needed in strategic locations both interior and exterior to improve facility safety. All classrooms throughout the facility are dated including the administration suite and gym; have worn finishes, poor lighting, and need to be renovated including being repainted and have the chalkboards replaced with white-boards with storage casework and Smart Board Technology. Casework in the classrooms is in fair to poor condition and was only partially replaced in 2005, however the built-in computer stations in the technology labs require repairs. The auditorium also needs a complete renovation as many of the seats are broken, and the isle ways need hand rails due to the steepness of the slope, and landings to meet overall safety needs as well as ADA requirements.

The administrative offices are not located adjacent to the main entrance which is a security issue for the school as well as a priority of the district. There is a bell/camera system to allow entry to the building during school hours, which often does now work and administrative staff have to go open the door to allow visitors in. However, when it is operational it does not prevent visitors from wandering off and not checking into the office thereby creating safety issues. During the master plan process, it was identified to relocate the administrative suite into the former Home Ec classroom which is located directly next to the main entrance. This would allow for a secure vestibule to be installed that would include doors with magnetic locks to be installed which would route visitors directly to the administrative office, and would correct this issue for the school.

Mechanical/Plumbing:

Both buildings have a combination of multiple rooftop HVAC units with refrigerated air and evaporative cooling that are in poor condition, as well as an aging furnace systems and air handlers that are needed to provide fresh air exchanges. All of these multiple types of systems which has resulted in a very inefficient system that is difficult to maintain Both the Main Building and Gym building needs a complete new HVAC system along with a new facility-wide central control system, and should include

Handrails * landings need to be provided for ADA. Repair/replace seating

Replace flooring & wall base

Replace piping insulation

Ductwork insulation needs to be repaired/replaced

Remove debris & equipment on roof

testing and balancing of all the HVAC units once complete. The roof top gas lines for the HVAC equipment are rusted and need to be tested for leaks. The exhaust fans in the restrooms require replacement, as they are minimally operable and do not provide adequate ventilation. Most of the existing water heaters are more than 20 years old and are in need of replacement.

The restrooms need complete renovation in both the main building and gym to include all plumbing including hot water supply, fixtures, partitions, ventilation, lighting, toilet accessories and wall/ floor finishes and ADA compliance. The locker rooms were last renovated in 2005 and appear to be in good condition, however they are in need of maintenance. The district has reported issues with the existing water and sewer lines, which will require upgrading/ replacement as part of any renovation project.

Electrical:

There are two separate electrical systems that feed each building, the main building is fed from a 300 KVA ground mounted transformer that delivers 120/208v 3-phase, 4-wire power, and the gym is fed from a 150KVA ground mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. If the facility undergoes a major renovation, the facility will be in need of a secondary service upgrade throughout as there is not sufficient capacity available. Many classrooms have outlets that do not work or enough available to meet technology needs, and teachers utilize power strips and extension cords to have power where they need it. Either surface mounted, pendent or 2X4 lay-in fluorescent light fixtures provide lighting throughout the facility, with many being the original light fixtures from the 1970's. Lighting is in fair to poor condition and requires a complete upgrade both exterior and interior including new wiring in many areas. Emergency lighting and exit signage has been provided with backup systems and appear in operable condition.

Fire Protection/ Life, Safety Systems/ ADA Compliance:

The fire alarm system consists of audible and visual annunciators throughout the building and was upgraded in 1994. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects, and may require a booster pump due the location

Drainage improvements on west side of gym needed

Repaye drive lane on south side of gym

Reseal building perimeter

Replace evaporative cooler at kitchen

Renovate gym restrooms

of the school. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

FMAR's:

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. As this school site has been identified for closure at the end of the 2016/17 school year, all major findings unless related to immediate life, health, safety corrections will not be completed. Only the gym will remain operational at this time, no major capital improvements other than mission critical items will be completed until the Board of Education determines whether the gym facility will remain or be demolished. As for the minor findings, only items that have a direct mission critical impact will be corrected for the main building and all other facility needs for the gym were given to the LVCS Maintenance Department to be entered into School Dude and will become summer work projects.

Renovate gvm restrooms

Replace sinks & counter tops

Repair ADA shower & provide curtain

Replace bleachers & comply with ADA

Replace gym flooring

Rooftop equipment needs to be replaced/ repaired

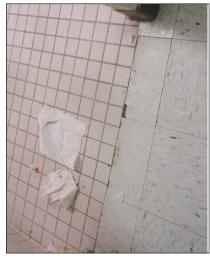

Telephone wiring/cabling needs to be upgraded

Replace carpet in all classrooms

Water heater needs replacement

Replace VCT & provide transition strip

Replace door & hardware in the art room to meet egress requirements

Replace VCT throughout

Drainage gutter/culvert needs to be replaced for positive flow

Renovate all restrooms & comply with ADA

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | Maintenance | 2013 GO Bond | 2017 GO Bond Project | Other Funding | Future GO Bond | |
|---|-------------|---------------|-------------------------|------------------|-------------------|---|
| School Facility/ Building | Work Order | Project Funds | Funds | Options | Project | Facility Deficiencies & Needs |
| Memorial Middle School | | | Х | | | FACILITY IS TO BE CLOSED AS OF THE 2017/18 SCHOOL YEAR AND HAS BEEN IDENTIFIED FOR DEMOLITION |
| Memorial Middle School - Site | х | | | | | Dirt track needs to be regraded - Long term the track should at least be asphalt paved at a minimum. |
| Memorial Middle School - Site | х | | | | | Clean and grub soccer field and reseed for grass. <i>Does this area</i> need to be irrigated? Ask Chris |
| Memorial Middle School - Site | | | | | | Grading and drainage improvements along the north and west sides of both the main and gym buildings. Several existing drainage swales have overgrown plant material and culvert pipes around the campus have become clogged with debris. Other areas include where roof drains/ downspouts do not have proper splashblocks and have caused erosion and undermining of nearby sidewalks. |
| Memorial Middle School - Site | | | | | | Concrete valley gutters between the main building and gym, and along the north side of the main building do not drain properly and needs to be reworked to reduce ice build-up and drain properly. |
| Memorial Middle School - Site | | | | | | Repair cracks, correct ponding areas near the gym, resurface parent drop/pick-up, parking lot and re-stripe. Install compliant ADA signage and paint curbs. Current ADA parking spaces are not compliant (size and signage). |
| Memorial Middle School - Site | | | | | | Replace broken/ damaged sidewalks along south side of the main building and between the gym, along the south and west sides of the gym and the perimeter of the main building. Improve ADA access to the main entrance and gym. |
| Memorial Middle School - Site | | | | | | Regrade west side of the gym where several portables were previously located to reduce ponding - remove remaining portable. |
| Memorial Middle School - Site | | | | | | Replace missing backboards and damaged goal posts at exterior basketball courts on the south side of the campus. |
| Memorial Middle School - Site | | | | | | Replace deteriorated outdoor seating tables between the main building and gym |
| Memorial Middle School - Site | | | | | | Improve site directional signage campus-wide |
| Memorial Middle School - Main Building | Completed | | | | | Structural Investigation: To determine extent of repairs and stabilization required. |
| Memorial Middle School - Main Building | Х | | | | | Replace broken windows at the north and west sides of the building. |
| Memorial Middle School - Main Building | X | | | | | Repair holes in stucco to reduce potential moisture damage - multiple locations around the building and at the damaged wall corner at the main entry. |
| Memorial Middle School - Main Building | Х | | | | | Replace broken security camera's at the north and south west corner's of the building |
| Memorial Middle School - Main Building | Х | | | | | Replace missing/ damaged roof downspouts at southeast corner of the building |
| Memorial Middle School - Main Building | Х | | | | | Repair damaged roof flashing at the northwest corner of the building and multiple other locations on the upper roof area. |
| Memorial Middle School - Main Building | Х | | | | | Replace broken exterior light at exit on the northeast side of the lecture hall |
| Memorial Middle School - Main Building | Х | | | | | Reseal/caulk all existing skylights |
| Memorial Middle School - Main Building | Х | | | | | Remove debris from the roof and clean all roof drains and downspouts |

| | | | 2017 GO | Other | Future GO | |
|---|---------------------------|-------------------------------|-----------------------|-----------------|-----------------|--|
| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | Bond Project Funds | Funding Options | Bond Project | Facility Deficiencies & Needs |
| Memorial Middle School - Main Building | Х | | | | | Roof Maintenance: Re-caulk all skylights, flashing and coping seams. Clean debris off of roof, from roof drains, gutters and downspouts. Including repairing damaged roof flashing at the northwest corner of the building and multiple other locations on the upper roof area. Repair/ Replace damaged downspouts and remove unused wires on roof |
| Memorial Middle School - Main Building | Х | | | | | There are several open (8" dia.) raised penetrations on the roof that do not have covers or are connected to equipment. Suspected roof overflow drains - additional investigation is needed by maintenance to determine if these openings need to have roof drain covers installed or openings sealed to prevent water infiltration. |
| Memorial Middle School - Main Building | Х | | | | | Repair all disconnected rooftop gas lines. Test all remaining rusted rooftop/ exterior gas lines for leaks & repair as required. |
| Memorial Middle School - Main Building | Х | | | | | Replace missing rooftop exhaust fan shroud - SE corner of the building |
| Memorial Middle School - Main Building | Х | | | | | Install exit light and panic hardware on exterior door in Art Room |
| Memorial Middle School - Main Building | Х | | | | | Replace both corridor doors and hardware to the lecture hall. Doors sticking and door hardware is in poor condition. |
| Memorial Middle School - Main Building | Х | | | | | Replace broken door hardware near girls restroom at NE corner of building. |
| Memorial Middle School - Main Building | х | _ | | | | Repair water damage to skylight wells in library and repaint |
| Memorial Middle School - Main Building | х | - | | | | Install door stop, repair hole in exterior wall and replace exterior light fixture at southeast corridor exit |
| Memorial Middle School - Main Building | Х | - | | | | Replace damaged/ stained ceiling tiles throughout |
| Memorial Middle School - Main Building | | | | | | Structural Repairs: Repair facility according to recommendations contained in the building's structural report to include extensive site drainage improvements, foundation repairs and stabilization of the building, and possible hazardous material remediation. |
| Memorial Middle School - Main Building | | | | | | Seal perimeter of the main building between adjacent sidewalk and building edge to reduce water infiltration and damage to stucco - multiple areas where there are gaps 1/2-1". |
| Memorial Middle School - Main Building | | | | | | Sand, primer and repaint all exterior metals including columns, flashing, trim, misc. framing and handrails. |
| Memorial Middle School - Main Building | | | | | | Clean and re-caulk all vertical joints, around wall openings and misc. wall penetrations. |
| Memorial Middle School - Main Building | | | | | | Replace damaged/ cracked stucco system and recolor coat entire building - the most severe damage is on the north side of the building. Repair damage to multiple areas including wall base, corners and all building addition connections. |
| Memorial Middle School - Main Building | | | | | | Replace exterior doors, frames and hardware. Design Professional to review egress requirements for exiting at exit doors that have been reduced from two to single doors. |
| Memorial Middle School - Main Building | | | | | | Replace exterior window system including blinds |
| Memorial Middle School - Main Building | | | | | | Replace all exterior building lighting - LED |
| Memorial Middle School - Main Building | | | | | | Roofing: Replace metal roof panel screens and partial TPO roofing (1994 library & classroom addition - 27,172 SF) systems including all fascia, flashing, copings, gutters, downspouts and provide new roof ladders. |

| Building | | | | | | Replace skylights with translucent skylight system |
| Memorial Middle School - Main Building | | | | | | Building Security Improvements: Renovate/ Relocate Administrative office adjacent to the front entry and provide secure entrance to the building. The existing layout is non-functional and needs improvement to meet the needs of the students and staff. |
| Memorial Middle School - Main Building | | | | | | Improve security to Electrical Room at NE corner of building where main service entry is located. Infill window opening as part of exterior building envelope improvements. Install missing covers on some panels and relocate items stored in front of electrical panels. |
| Memorial Middle School - Main Building | | | | | | Remove VCT throughout, repair areas of damaged concrete and polish concrete. Includes removal of carpet in corridors. |
| Memorial Middle School - Main Building | | | | | | Replace carpet in offices, library, lecture hall and some classrooms with carpet tile. |
| Memorial Middle School - Main Building | | | | | | Renovate Art Room, replace casework for storage of art materials and supplies, new sinks with clay traps, flooring, add additional power outlets, provide proper ventilation at Kiln-install exhaust fan/ hood system that meets current IEBC requirements. |
| Memorial Middle School - Main Building | | | | | | Replace Fire Alarm System - Inc. Gym |
| Memorial Middle School - Main Building | | | | | | Replace Intercom/ Clock System - Inc. Gym |
| Memorial Middle School - Main Building | | | | | | Renovate all restrooms in their entirety. (flooring, finishes, plumbing, fixtures, lighting, partitions, accessories and ventilation) and comply with all ADA requirements. Inspect water/ sewer lines and replace as part of all restroom renovations as required. |
| Memorial Middle School - Main Building | | | | | | Replace remaining chalkboards throughout with marker boards and Smartboards |
| Memorial Middle School - Main Building | | | | | | Lecture Hall Renovation: Improve acoustics through wall and ceiling acoustical panels, install Smartboard, replace broken/damaged seating, install handrails along perimeter walls and down center aisle. Due to the existing slope of floor, modifications may be required to provide landings, full code analysis of this area required for renovation. |
| Memorial Middle School - Main Building | | | | | | Provide secondary egress from former Home Ec Classroom, exceeds 1000 nsf. |
| Memorial Middle School - Main Building | | | | | | Repair and patch walls as needed and repaint entire interior and install corner guards to prevent future damage |
| Memorial Middle School - Main Building | | | | | | Replace all lockers in corridor - 350 to be provided |
| Memorial Middle School - Main Building | | | | | | Replace casework in all classrooms |
| Memorial Middle School - Main Building | | | | | | Replace all drinking fountains throughout provide wing walls if required to meet ADA requirements |
| Memorial Middle School - Main Building | | | | | | Renovate Science Labs including casework and eyewash/ shower. |
| Memorial Middle School - Main Building | | | | | | Replace interior lighting throughout to LED, upgrade all emergency back-up and exit lighting |
| Memorial Middle School - Main Building | | | | | | Replace Janitor mop sinks and surrounds in all custodial closets |
| Memorial Middle School - Main Building | | | | | | Upgrade HVAC System - Existing system is a mix of multiple systems that do not function well together |
| Memorial Middle School - Main Building | | | | | | Install new DDC system for HVAC, and test and balance ALL equipment. |

Capital Improvement Costs:

The costs below are for demolition of this facility based on the approved Board of Education's "Right Sizing Plan" that will consolidate the students from this facility into other schools that have excess capacity in the district. The costs that have been identified on the following pages identify the costs for facility improvements needed if this facility were to be retained for educational purposes for budgeting purposes.

Facility Description

Visions In Planning, Inc.
Educational Facility Planning Consultants

Memorial Middle School is located in Las Vegas, NM, on Old National Avenue, and falls within the Las Vegas City School District. It is a 1-story campus with permanent buildings and portables. The facility houses 6th through 8th grade students and has a staff of approx 65. The campus is made up of four permanent assets. Originally constructed in 1970, there have been three additions. To accurately capture repair costs, the complex is split into five building assessments Site: The immediate site is approximately 35.4 acres and includes an athletic field and a hard surface play area. The school has a parking capacity of 211 (11 are handicap spaces). Concrete sidewalks are adequate. Landscaped areas include grass and gravel and the grass areas are irrigated. Site drainage is not adequate (the site is a low area) Structural/Exterior Closure: The building rests on caisson foundations that are showing no signs of damage or settlement. The building structural system uses CMU and steel. The facade includes 1970's style features which are not architecturally significant. The modified bitumen roof was last replaced in 1996 and is leaking in a few places. The exterior doors are hollow metal, and windows are operable, double-pane units with aluminum frames.

in 1995; however, large spaces use Interiors: Partition wall types include painted drywall and painted CMU. The facility was last painted in 1996. Most ceilings are acoustical lay-in tile mat was replace drywall cellings. Flooring in high use areas is vinyl composition tile and carpet; flooring in rooms/suites is vinyl composition tile and carpet.

supplied through ution system is sup Mechanical/Plumbing: Heating and cooling for the building is supplied by rooftop gas-fired units. The heating/cooling distrib piping are doors and windows. Exhaust fans are operable and bathroom ventilation is adequate. The plumbing fixtures and

din building and a 350 amp panel in the gym building. Ors and exit signs are typically illuminated. The facility in the anel are np main an 800 an Electrical: The electrical system is fed from a 150 kVa transformer that delivers 277/480 V., 3-5h, 4-wire power via Branch circuits within rooms are 120/208 V. Lighting is fluorescent and illumination is adequa

orridors have appropriate fire separation and interior doors on escape corridors are fire rated xits and smoke detectors, strobes, and audible alarms in rooms, corridors, and other tations at Cap compliant. effre sprinkler systems. m consists of manual pull enerally har e fire alarm syste complex Fire Protection/Life Safety Systems/Accessibility. Executive Summary Report

Water leak has damaged lower interior walls and base boards Carpeting is damaged, but is worn out anyway, the whole area has stale, rotten odor due to moisture. HVAC units are failing due to maintenance issues all dates set to 2005, adjusted back to 1994

Ceiling tiles: Damaged ceiling tiles due to water leak estimate 20 -30% or greater

Original Gym & Cafeteria (1970): There has been at least one serious water leak, some flooring in cafeteria and gym are damaged needing replacement, in gym damage causing trip / injury hazard. Not all flooring is damaged estimate 10% gym wood floor and 10 % of Cafeteria VCT flooring needs replaced. See 1994 addition for damage in that area.

HVAC units are in very poor condition due to lack of maintenance. Some Units are on verge of total failure.

Comments Section

Roadway/Parking

Parking lots in poor condition, surface is heavily worn, excessive cracking and splitting, potholes forming, some repaired, parking area striping and cross walks faded but visible, directional arrows not visible. There is one small area in front of cafeteria that has been re-coated, not refinished.

Results Marginal, due to overall condition of parking lots. Lots would be poor except there are repairs that have been made and some pot holes filled in.

Site Utilities

Site utilities are located away from traffic areas and locked. Utilities located East of the main building are accessible to anybody without any protection or deterrent. Other locations have bollards and some fencing, these areas have indicators of excessive weeds during warmer months.

Overall site utilities performance level is marginal due to unprotected East side location and uncontrolled weed indicators in other locations.

Playgrounds/Athletic Fields

The area South of gym has basketball courts and an open area. The concrete is cracked badly but not to trip hazard level, the open area has weeds and rocks strewn about and not well maintained at all.

West of the facility is a very nice baseball facility, assumption high school use, North of that is a nice football facility. Natural grass in normal condition for late winter environment. East football field is what remains of a soccer complex complete with lights and CCTV surveillance. The rest of the complex is totally run down receiving no maintenance, playing surface has been allowed to revert back to weeds.

Results: Poor due to condition of the facilities used by the MS students. Baseball park is locked and it seems it is used for high school level baseball with 300 ft. fencing 90 ft. base paths, i.e. not suitable for mid school level students. The soccer complex is unusable due to poor condition of the playing surface.

Note: areas is experiencing drought conditions which impact ability to water grass areas, however this area is overgrown with un-checked weeds indicating total lack of maintenance. Note: the football and baseball field surfaces are being watered.

Site Drainage

Site drainage is well designed to allow water to drain away from facilities and parking lots to the main drainage ditch located on SW part of property. The system is however not being maintained, ditches are clogged with weeds and debris, several down spouts are damaged or missing with indication this has been the case for quite some time.

Drains on West side is causing erosion under the portable, damage to footings is probably resulting from this erosion. Results: Poor due to the damaged down spouts and system clogged with weeds, debris and erosion damage.

Sidewalks

Sidewalks are old and worn with a lot of cracking, some areas are at trip hazard level.

Spalling and chipping is present but is not excessive. Results: Marginal. The results would have been satisfactory except trip hazards require major deficiency which require at best a marginal performance level.

Grounds

Large areas are fenced off due to construction activities. Remaining areas are natural areas.

Observed weed growth on West of facility, this area is normal for late winter conditions. Results:

Satisfactory or normal conditions given the construction activities.

Windows/Caulking

Overall condition of windows and caulking are very poor. No screens, damaged or missing, broken windows, damaged frames, gaps in caulking observed on most windows. Damage to windows has been there for a while. No indication of attempt at repair in most cases. In many cases the windows will not close. One window, assumed glass is broken, is covered by plywood screwed into frame. This temporary patch has been in place so long the wood is warping and weathered. Estimate at least 6 moonths to 1 year. In most cases screens are not on windows and have not been in place for some time. Results: Poor with Major Deficiency due to heavy unrepaired damage to facility.

Walls/Finishes

Exterior walls and finishes are in Poor condition. Graffiti, unrepaired holes and cracks noted in several

places, especially near the art room door. There is heavy damage to walls, probably moisture or water penetration in this area. Wall to sidewalk caulking is split or nonexistent resulting in damage to lower areas of walls in many places.

Results: Poor with Major deficiency, due to apparent lack of maintenance and repair, with no discernable effort to repair or mitigate possible additional damage.

Entry/Exterior Doors

Exterior doors are in poor condition. Hardware and protective covers missing or damaged, no apparent attempt to repair or replace, A Recently replaced door at main entrance is so poorly installed and adjusted that it will not close without being forced, scraping and indications are that this has been the case since install

Results: POOR performance level. Major Deficiency for very poor installation of the new door at main entrance.

Roof/Flashing/Gutters

TPO roof 2005 install roof seems to be OK, without major leaks.

Some walk and maintenance pads are loose and peeling. There is a lot of trash, debris and discarded service parts on the roof surface. Many equipment service panels are simply laying on the roof surface. Many down spouts are damaged or missing, the performance level for service, maintenance activities is marginal at best as indicated by the accumulated trash and debris and discarded service parts on the roof surface and missing down spouts.

A major deficiency factor is identified due to the numerous equipment access panels which are laying on the roof surface, some have obviously been there for some time. All obvious indicators of very poor level of maintenance activities. See building Equipment for heating cooling and ventilation systems.

Walls/Floors/Ceilings/Stairs

Interior walls are in good condition. VCT flooring and carpet are heavily worn, there are a lot of stained ceiling tiles, these probably did not get replaced when the roof was installed.

Many of the tiles near AHU outlets are very dirty.

Results: Marginal performance level due to the many stained or dirty ceiling tiles needing replacement, chipped or missing floor tiles and overall poor condition of interior surfaces. The exception is the internal wall finishes which are OK preventing a Poor performance level.

Interior Doors

Interior doors are serviceable, they open and close as intended. There are some maintenance and hardware issues such as missing covers and a few doors just a bit out of adjustment. The level is not excessive. Satisfactory performance level.

Restrooms

Restrooms were found to be well kept, clean and fully functional. Fixtures worked as designed. No issues noted. Results Satisfactory performance level.

Housekeeping

Overall public areas of the facilities are well kept. Restrooms, kitchens, offices, meeting rooms and break rooms are clean and orderly. Storage rooms, vacant class rooms, electrical and mechanical rooms are not being well kept - these rooms are a mess, storage is not well managed haphazard at best in many cases a fire hazard. Results: Marginal performance level mostly due to the condition of the storage in the vacant rooms.

Elecrical Distribution

Electrical distribution panels are secured and panel schedules are available. Some open or missing breaker covers were noted and a couple of junction boxes were open with wiring exposed.

Some panels do not have the required 3 ft. clearance due to unmanaged storage issues.

Performance levels Satisfactory as most panels were in good condition. Minor deficiency factor due to storage issues and open junction boxes.

Lighting

Lighting in the facility is adequate. Lights were noted as functional.

Tested Emergency lighting was functional. Illuminated exit lights were noted in working condition.

Exterior lights had some dirty lenses with some fading. Soccer field had exterior lighting.

Results: Satisfactory performance level as no issues were noted.

Recommend checking outside lights during night time and performing a full fictional test of interior

2017 - 2022 Facility Master Plan • Las Vegas City Schools

SECTION 4.0 - SUPPORT INFORMATION

emergency lighting to assure proper function. Clean or replace lenses which have become cloudy due to sun exposure or dirty lenses.

Fire Protection Systems

Building fire alarm system was in normal condition, seems to have had annual inspection.

Fire extinguishers were up to date on annual inspection and are receiving monthly inspections.

Kitchen portable extinguisher was up to date on annual service and had received monthly check.

Results: Satisfactory performance level as all fire systems were in functional condition.

Equipment Rooms

Equipment rooms are not well kept. Storage issues identified.

Areas were cluttered, dirty with improperly stored equipment causing access issues.

Performance level is Marginal.

Heating/Cooling/Ventilation

Heating, cooling and ventilation units have no indication of having any effective maintenance at all. Air filters have not been changed for some time, there is no indication of filters ever being changed. Filters are clogged some have collapsed into the fans in some cases causing additional damage. Some have been removed to allow air flow around clogged filters. Heating/cooling unit service panels are not installed correctly on almost every unit, many have fallen off the units opening the units to environmental conditions and causing heating or cooling problems as well as damage to the roof surface and electronic and control equipment. Performance level is very Poor with several Major deficiencies indicating the level of neglect of the maintenance and performance requirements for these systems.

Air Filters

There is no indication of air filters being serviced. There are plugged up filters in every unit checked. Many units had missing service panels so filters are exposed to weather conditions. Many filters have collapsed into the equipment or duct work or had been removed to allow air flow around plugged up filters. One unit had 1" wide filters installed where 2" filters were required.

Damage to fans, belts and equipment due to clogged filters and improper service is evident in almost every unit on the facility.

Performance level Poor with Many major deficiencies identified.

Kitchen Equipment/Refrig

Kitchen overall was clean well kept. Equipment appeared almost new and fully functional, freezer vanes were clear. Results: Satisfactory performance level. No issues noted.

Plumbing/Water Heaters

Plumbing water heaters are of newer type and recently installed. No Issues noted, equipment and fixtures appears well kept and fully operational. Results satisfactory performance level.

As part of the LVCS "Right-Sizing" Plan, as of the 2017/18 or 2018/19 school year all 7th and 8th graders will attend the new 7th/8th Grade Academy at Robertson High School to be primarily located in the Patio Building. Two buildings have been identified for decommissioning and demolition (Chorus and Quintana Buildings) to reduce square footage on the campus. A new outdoor basketball court will be constructed in the place of the existing Chorus Building. The long term intent for the campus is to convert the gym at McFarland Hall into a new kitchen and cafeteria, and for a new auxiliary gym to be constructed adjacent to Marr Gym.

Facility Notes and Comments:

Robertson High School was constructed in phases starting in 1936 and over the years as old buildings were demolished replacement buildings have been constructed. McFarland Hall is the last remaining building from the original construction and had a small addition in 2002, the Main Classroom building was constructed in 1951, both the Patio building (former Junior High building) and the Chorus buildings were constructed in 1961, the Quintana building was constructed in 1970, followed by the Career Education Building in 1975; the Marr Gym was constructed in 1983 and was expanded in 1997 when the Media/ Science building was constructed. The campus is split in elevation with the majority of the educational facilities located on the western portion of the site and the Marr Gym and athletic facilities located to the east at a lower elevation, the existing campus facilities are comprised of 173,924 permanent square feet with no portables on site. As part of the district's approved "right sizing" plan, the district intends establish a new 7th/8th Grade Academy effective the 2017/18 school year and relocate the incoming Memorial Middle School students to the Robertson High School campus. The Chorus and Quintana buildings at this site have been identified for demolition as part LVCS's effort to reduce overall square footage.

Overall Campus Conditions:

Robertson High School is located at 1236 5th Street and the upper portion of the campus is bordered by residential streets on all four sides, with the adjacent land use in the area being residential development. There is a concrete barrier in place at the corner of 4th Street and Friedman Avenue to close the south portion of the campus to thru-traffic. The RHS campus is approximately 24.0 -acres and is fully developed with buildings, parking areas, walkways, landscaping, tennis courts, and the main sport fields areas are located at the lower level to the east between 4th and 2nd Streets. Grass, trees, and shrubs are the main landscaping features on the campus and are in need of significant improvements. The outdoor student commons just south of the main building was constructed in 2010 and has a covered seating area as part of the amphitheater that is need of maintenance. The site has a large developed main football with track, two areas of tennis courts and to the far north of the site is the school's baseball field and practice football/soccer field. There have been many problems reported with the lift-station near the "Cardinal Alley" restroom and it needs replacement.

There are two primary parking areas for the high school — a central area at the main portion of the campus on the west side of 4th Street and down near Marr Gym and the athletic fields for a total of close to 400 parking spaces including approximately 20 ADA parking spaces campus-wide. Parking is not allowed along 5th Street, Baca Avenue or Friedman Avenue due to a Las Vegas City ordinance. All paved areas are in fair condition, the paving along 4th Street needs to be resurfaced and will need to be a joint project between the City and the District. All of the school's parking areas need various levels of repairs, resurfacing or top coat and re-striping.

There are several areas of both steps and ramp located throughout the campus that need new handrails installed, concrete sidewalks and stairs to be replaced. Concrete sidewalks overall across the campus are in fair condition with several

Replace concrete pad & provide sidewalk for ADA access

Replace broken ramp lighting

Field upgrades completed

Provide paved surface to access play fields

Replace spalled concrete & repaint metal rails

areas of spalled surfaces that need to be replaced to prevent tripping.

The bus drop-off and pick-up is located on the west side of the main building along 5th Street and is sufficient to meet the school's needs. There is not a "true" dedicated parent drop-off and pick-up area, however parents typically use either Friedman or Baca Avenues for this activity causing traffic congestion occurs in this area during both drop-off and pick-up times, as waiting parents block in the parked cars. School personnel currently help direct traffic through the parent drop/pick-up area to keep traffic flowing. The parent drop/ pick up needs to be re-evaluated to improve access and safety as the enrollment at the school site increases with the inclusion of the new 7th/8th Grade Academy.

Site security of the campus is a concern as the campus is not fully fenced and can be easily accessed by the public. New fencing is needed around the perimeter of the west portion of the main campus to connect it to the lower portion of the east campus, an entry access gate along 4th Street is needed to control daytime traffic access to the campus.

Constructed: 1936, Addition 2002

Permanent SF: 18,637 GSF

Facility Notes and Comments:

McFarland Hall the oldest building on campus was constructed in 1936 as the high school gym, and received an addition to the north side with locker

room renovation in 2002 and is comprised of 18,637 SF. This facility serves as the Main Administration hub of Robertson High School with the former lobby, concession and restroom areas converted to offices. The existing gym remains with one section of the original bleachers over the only remaining locker room and is primarily used for after school athletics. The bleachers do not meet ADA requirements, handrails/ guardrails are installed too low or are missing. The locker room below was renovated about five years ago, when the new concession addition was completed. The stage area has been enclosed and is only used for storage.

Site:

The main entry to the Administrative Offices is to the west along 5th Street and away from the core of the campus. The Main Academic Building is directly to the north along with the outdoor amphitheater, tennis courts are located to the south and to the east is the central parking lot, which can only be accessed via 4th Street. Grading and drainage improvements are needed around the entire facility and landscape trimmed. The entrance is accessed via concrete steps that are in fair condition (some areas of spalling); there are areas in front of the building where the sidewalks have excessive spalling as well. There are two ramps to access the facility; one at the main entrance and one to access the rear of the stage, both need improvements and new handrails.

Structural/Exterior Closure:

The facility was constructed with concrete footings, stem walls with basement

Handrails required at exterior stairs near Marr gym

Resurface parking lot &re-stripe

Replace handrails & comply with ADA & current code

Replace damaged/uneven sidewalks

Replace exterior windows & tuck-point

(for the locker rooms and a crawl space), and concrete pad for the concrete slab. The oldest portion of the building is experiencing settlement in several areas and the district recently had Chavez-Grieves Consulting Engineers complete a structural assessment report for this facility that identifies multiple areas of repairs and reinforcement needed from the foundation, to the exterior walls and to the roof diaphragm. Exterior masonry walls, steel columns and joists, and metal decking form the roof structural system.

The exterior walls consist of CMU with a brown/light colored brick veneer at the oldest portion of the building and fluted brown CMU at the classroom addition, all of which needs joint maintenance, repairs, and tuck-pointing. There are two roof systems in place - standing seam metal roofing at sloped areas and an old single-ply membrane roof system (EPDM). The metal roofing system is in fair condition, however the EPDM roof system over the administrative area needs a complete replacement as there have been multiple leaks reported over these areas. At areas that have parapets, metal caps and flashings are in place. Overall roof maintenance is needed at all base/ perimeter flashings, and repairs/ repainting of soffits.

The exterior doors frames are hollow metal throughout the facility, with exterior hollow metal doors that are either solid panel or have glazed inserts, and are in fair to good condition. Several exterior doors and hardware need to be replaced as many are damaged or missing door hardware, and automatic door openers need to be replaced to meet accessibility requirements. The exterior windows are double-glazed aluminum with a combination of fixed and operable windows, most with broken seals, warped frames, and damaged screens all needing replacement.

Interiors:

The interior walls are a combination of painted brick and glazed CMU in the old gym area and wood/metal stud framed walls with painted gypsum board which is in fair to good condition, only needing minor repairs and repainting, including installation of corner guards to reduce future damage. The interior hollow metal door frames and the interior wood doors and hardware are also range from fair to good condition.

The flooring in the gym, adjacent restrooms and entryways is vinyl composition tile (VCT) with main floor of the gym being rubber, carpeting and ceramic tile in the Administrative office areas, all of which needs replacement. Both the concession kitchen and locker rooms have the ceramic tile flooring and wainscoting. Sealed concrete is in the storage rooms and the stage still has the original wood flooring. The ceiling surfaces are a combination of 2x4 layin ceiling tile in the administrative areas, some corridors and both the kitchen and concession, painted gypsum board/plaster in some restrooms, and 12"x12" glue-on tiles (that may contain asbestos) in the gymnasium. There were several areas observed that have water damage from previous roof leaks that still need to be repaired/ replaced.

Mechanical/Plumbing:

Heating for the facility is provided by a series of small boilers and cooling is provided via rooftop DX cooling units. The entire building needs a complete new

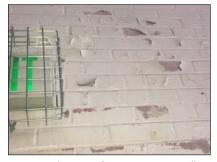

Stairs need handrails installed

New guard rails needed at delivery dock

Replace damaged ceiling

Scrape peeling paint & repaint interior walls

Replace stained/damaged ceiling tiles in admin area

HVAC system along with a new facility-wide central control system, and should include testing and balancing of all the HVAC units, once complete. The exhaust fans in the restrooms require replacement, as many are minimally operable and do not provide adequate ventilation. All of the water heaters range in age from 5-14 years old and a few are in need of replacement.

Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed in the administrative area. The one remaining locker room was renovated about five years ago and is in good condition. The district has reported issues with the existing water and sewer lines, which will require upgrading/replacement as part of any renovation project.

Electrical:

The electrical system is fed from a 150k VA pad mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility that may need to be upgraded to accommodate a new cooling system. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures, pendent mount in the gym and surface mounted fluorescent light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does have fire sprinkler system in place which may be required to be upgraded under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

Replace missing handrail-safety hazard

Repair water damage at exterior soffit

Lower level locker room in good condition

Existing Mechanical System

Replace water fountain

RHS Main Academic Building

Constructed: 1951, Addition 1997

Permanent SF: 43,584 GSF

Facility Notes and Comments:

The Main Academic Building is located on the north end of the site and serves as the schools primary academic building. The 2-story facility was constructed in 1951, and received a two-story 4-classroom addition in 1997 and is comprised of 43,584 SF. As part of the district's "Right-Sizing" efforts and campus wide reorganization, this building will serve as the "core" academic building for all 9th-12th grades as of the 2017/18 school year.

Site:

The concrete sidewalks around the Main Building have several areas of spalled surfaces, settlement, and cracks due to age that need to be replaced to prevent tripping including sidewalk curbs that are not ADA compliant with appropriate curb ramps for access. Some of the steps that are used for egress on the east side end of the building that do not have railings and are in poor condition as well as the adjacent retaining wall. ADA access to all campus facilities will require improvements as part of a campus-wide sidewalk repair/replacement project and include the installation of ADA compliant ramps and handrails at all exterior steps. There are two open exterior stairwells located on the north and south sides of the building that were the original access to the basement. These two areas have poor drainage and trap water against the building's foundation and have poor fall protection in terms of hand and guardrails, redesign of these two access points needs to be completed. Grading, drainage, and landscape improvements are needed around the entire building.

Structural/Exterior Closure:

Originally constructed in 1954, the main building has undergone only one addition in 1997 and consists of 43,584 SF. The two- story building was constructed with concrete footings, stem walls with basement and crawl space, and a slab-on grade foundation at the west addition. The oldest portion of the building (34,495 SF) is experiencing significant settlement in several areas. The district recently had Chavez-Grieves Consulting Engineers complete a structural assessment report for this facility that identifies multiple areas of repairs and reinforcement needed from the foundation, to the exterior walls and repairs to the interior. The exterior walls consist of CMU with a brown/light colored brick veneer at the oldest portion of the building and fluted brown CMU at the classroom addition, all of which needs joint maintenance, repairs, and tuckpointing. The roof consists of a standing seam metal roof system that is 20 years old with metal soffit/fascia panels that needs to be replaced as there are areas of continuous leaks and fascia/ flashing damage around the perimeter. There is neither a gutter system in place to help keep water away from the building nor a snow stop system in place to reduce the impact of snow falling two stories.

Exterior doors and frames are hollow metal, doors are a combination of solid panel at exterior storage, and partially glazed doors at the main entry and classroom wings. The double door entries into the main entrance and classroom wings have double pane glazing and are in fair condition; while vestibules are

Main Academic Building & Student Commons

Repair retaining wall & provide handrails at steps

Basement access needs to be redesigned to improve drainage - North side

North side: replace basement access stairs

in place, doors have been removed rendering the vestibules inefficient. All exterior doors and hardware need to be replaced as many are damaged or missing door hardware, and automatic door openers need to be replaced to meet accessibility requirements. The exterior windows are double-glazed aluminum with a combination of fixed and operable windows, most with broken seals, warped frames, and damaged screens all needing replacement.

Interiors:

Entry into the main building is difficult to monitor as the Main Administrative Office is located next door at McFarland Hall. All of the classrooms, science labs, former Tech Labs, and restrooms rooms are in need of refurbishment and finish upgrades. The interior partitions are a combination of painted plaster, fluted CMU, wood/metal stud framed walls with painted gypsum board and are in poor to good condition, with several walls and ceilings needing structural repairs. The interior door frames are hollow metal with fire-rated solid wood doors and all classroom doors have vision panels.

Flooring throughout varies throughout with ceramic tile in the lobby area, vinyl composition tile in the corridors, and classrooms, all areas appear to be in poor to fair condition with the elevator flooring having the most damage. The flooring in the restrooms is vinyl composition tile or ceramic tile w/ ceramic tile wainscoting and sealed/painted concrete in the mechanical/janitor rooms. The ceilings throughout consist of two types: painted plaster, and 2'x4' suspended ceiling tile system. There are some stained ceiling tiles are in several locations and areas of plaster damage from previous roof leaks. The ceilings in the restrooms, and storage areas have painted gypsum board / plaster ceilings with either surface mounted or recessed lighting.

Mechanical/Plumbing:

Heating for the facility is provided by a central boiler system that is located in the basement. The facility recently underwent a boiler upgrade 2012, however the building often has issues with controls. Warm air is distributed through an inceiling ductwork system. The facility's cooling system consists of old inefficient thru-window residential grade refrigerated air units, that are installed in most classrooms - the entire system needs to be replaced. The exhaust fans in the restrooms require replacement, as many are minimally operable and do not provide adequate ventilation. All of the water heaters range in age from 5-20 years old and a few are in need of replacement.

Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed. District has reported issues with the existing water and sewer lines, which will require upgrading/ replacement as part of any renovation project. The water fountains throughout are of multiple ages ranging from the original to units that are just a few years old, more than half of the facility's water fountains need to be replaced.

Electrical:

The electrical system is fed from a 300k VA pad mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility that may need to be upgraded as to accommodate a new cooling system. The facility is also in need of a secondary

Science lab needs renovation

Repair wall damage & repaint

Replace flooring in corridors

New Boiler System Cooling System Still Needed

service upgrade throughout to accommodate current and future technology needs. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures and surface mounted fluorescent light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office located in McFarland Hall, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does have fire sprinkler system in place which may be required to be upgraded under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to the facility's Intrusion alarm system including to the Main Administration Office located in McFarland Hall, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system in each classroom. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

RHS Patio Building

Constructed: 1961 **Permanent SF:** 21,158 GSF

Facility Notes and Comments:

The Robertson High School Patio Building consists of 21,158 square feet and was constructed in 1961. This facility was the former Junior High School when it was originally constructed. The former gymnasium was converted into an oversized band room with full stage at the north end of the building and there are general classrooms located in the south portion of the building. At one time, there was an interior courtyard that has since been enclosed and was used as office space when the facility was used as the 9th grade academy many years ago. As of the 2017/18 school year this facility will undergo minor improvements so that it can house the new 7th/8th grade Academy.

Renovate east restrooms

Renovate restrooms & comply with ADA requirements

Refurbish elevator

Patio Building Main Entrance

Replace spalled concrete steps & provide handrails

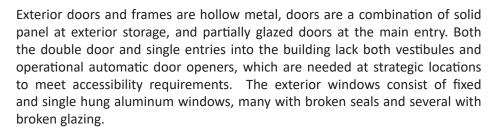

Site:

The concrete sidewalks around the building have several areas that are spalled, settling and cracked that require replacement to prevent tripping. The main entry to the building is located on the east side of the building; and an ADA accessible ramp in place. The egress exit from the north side of the building from the band room has a concrete stoop with steps that are spalled and do not have handrails. The south and east entrances are in fair condition. Overall, the site drainage is adequate; however, there are some areas around the building perimeter that are in need grading and drainage improvements, particularly between this facility and the adjacent Career Education Building to the west. Landscaped areas need improvement.

Structural/Exterior Closure:

The Patio Building was constructed with concrete footings and a built-up concrete foundation pad with crawl space in a portion of the building. Exterior masonry walls, steel columns and joists, and metal decking form the roof structural system. The exterior walls consist of CMU with a light-colored brick veneer, which needs joint maintenance and tuck-pointing and repairs where some masonry is missing. There is also an area on the south and east ends of the building that have areas of stucco that needs repairs and new color coat. The building is experiencing settlement in several areas and the district recently had Chavez-Grieves Consulting Engineers complete a structural assessment report for this facility that identifies multiple areas of repairs and reinforcement needed from the foundation, to the exterior walls and to the roof diaphragm. The roof consists of a standing seam metal roof system with metal soffit/fascia panels that needs to be replaced as there are areas of continuous leaks. There is neither a gutter system in place to help keep water away from the building nor a snow stop system in place to reduce the impact of snow falling from the eaves. Overall roof maintenance is needed at all base/ perimeter flashings, and roof seams.

Interiors:

The interior partitions are a combination of painted CMU, wood/metal stud framed walls with painted gypsum board and are in fair to good condition, with several walls and ceilings needing repairs and corner guards installed. The interior door frames are hollow metal with fire-rated solid wood doors and all classroom doors have vision panels. There is an interior lift system in place to assist students and visitors that need assistance to change levels.

Flooring varies throughout with vinyl composition tile in the lobby area, corridors, and classrooms; all areas appear to be in poor to fair condition needing replacement except for the band room which has recently had new carpet tile

Replace exterior windows

Replace damaged concrete sidewalks & reseal asphalt

Replace exterior doors & improve drainage

Replace missing exterior vent panel

Replace stair nosing's

installed. The flooring in the restrooms is vinyl composition tile w/ ceramic tile wainscoting and sealed/painted concrete in the mechanical/ janitor rooms. The interior stairs to transition levels need new step nosing's and handrails that meet current code requirements installed. The ceilings throughout consist of three types: painted gypsum board, 2'x4' suspended ceiling tile system, and exposed structure with tectum panels in the band room. There are some stained ceiling tiles in several locations and areas of gypsum board damage from previous roof leaks. The ceilings in the restrooms, and storage areas have painted gypsum board / plaster ceilings with either surface mounted or recessed lighting.

Mechanical/Plumbing:

Heating for the facility is provided by a series of newer small boilers and cooling is provided with DX cooling units with condensing units. The entire building needs a cooling system along with a new facility-wide central control system, and should include testing and balancing of all the HVAC units, once complete. The exhaust fans in the restrooms require replacement, as many are minimally operable and do not provide adequate ventilation. All of the water heaters are in need of replacement as well as water fountains.

Restroom renovation including plumbing fixture replacement and reconfiguration for ADA compliance is needed in the administrative office area at the south end of the building. The district has reported issues with the existing water and sewer lines, which will require upgrading/replacement as part of any renovation project.

Electrical:

The electrical system is fed from a pole mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. While the facility's primary service has been upgraded, the secondary service for facility will need to be upgraded to meet new programmatic and technology requirements. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures, pendent mount in the band room and surface mounted fluorescent light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does have fire sprinkler system in place which may be required to be upgraded under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and fixtures.

Replace stained ceiling tiles

Replace damaged ceilings & upgrade lighting

Replace VCT flooring

Restrooms need minor refurbishment

Stage area needs refurbishment

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

RHS Chorus Building

Constructed: 1961 Permanent SF: 2,989 GSF

Facility Notes and Comments:

The Robertson High School Chorus Building consists of 2,989 square feet and was constructed in 1961. This facility is centrally located on the main campus near the Patio Building and McFarland Hall. As part of the district's effort to reduce unneeded square footage as of the 2017/18 school year this facility has been identified for demolition.

Site:

The concrete sidewalks around the building have several areas that are spalled, settling and cracked that require replacement to prevent tripping. The main entry to the building is located on the south side of the building facing the back side of the band room; and an ADA accessible ramp in place. The egress exit from the east side of the building from the choir room have a concrete stoop with steps that are spalled and do not have handrails. The west doors to the building are in fair condition. Overall, the site drainage is adequate; however, there are some areas around the building perimeter that are in need grading and drainage improvements, particularly between this facility and the adjacent Patio Building to the south.

Structural/Exterior Closure:

The Chorus Building was constructed with concrete footings and a built-up concrete foundation pad. Exterior masonry walls, steel columns and joists, and metal decking form the roof structural system. The exterior walls consist of CMU with a light-colored brick veneer, which needs joint maintenance and tuck-pointing and repairs where some masonry is damaged. The building is experiencing settlement in several areas and the district recently had Chavez-Grieves Consulting Engineers complete a structural assessment report for this facility that identifies multiple areas of repairs and reinforcement needed from the foundation, to the exterior walls and to the roof diaphragm. The roof consists of a standing seam metal roof system with metal soffit/fascia panels that is in fair condition. There is neither a gutter system in place to help keep water away from the building nor a snow stop system in place to reduce the impact of snow falling from the eaves. Overall roof maintenance is needed at all base/ perimeter flashings, and roof seams.

Wheelchair lift is operable but should be

Choir Building

Stabilize structural settlement & repair masonry

panel at exterior storage, and partially glazed doors at the main entry. Both the double door and single entries into the building lack both vestibules and operational automatic door openers, which are needed at strategic locations to meet accessibility requirements. The exterior windows consist of both the original fixed and single hung aluminum windows with single pane glazing, all of which need replacement.

Interiors:

The interior partitions are a combination of painted CMU and wood stud framed walls with painted gypsum board, which are in fair condition, with several walls and ceilings needing repairs and corner guards installed. The interior door frames are hollow metal with solid wood doors and the choir room door has a vision panel. Flooring varies throughout with vinyl composition tile in the lobby area, corridor, and restrooms; and carpet in the choir room, office, and practice rooms. The ceilings throughout consist of three types: painted plaster/gypsum board, 2'x4' suspended ceiling tile system, and exposed structure with tectum panels in the choir room. There are some stained ceiling tiles/ tectum panels in several locations and areas of plaster damage from previous roof leaks. The ceilings in the restrooms, and storage areas have painted gypsum board / plaster ceilings with either surface mounted or recessed lighting.

Mechanical/Plumbing:

Heating for the facility is provided by a small boiler and no cooling is provided. The entire building needs a cooling system installed along with a new facility-wide central control system, and should include testing and balancing of all the HVAC units, once complete. The exhaust fans in the restrooms require replacement, as they are minimally operable and do not provide adequate ventilation, as well as the water heater and water fountains.

Restroomrenovations including plumbing fixture replacement and reconfiguration for ADA compliance is needed in the building's two single occupant restrooms. The district has reported issues with the existing water and sewer lines, which will require upgrading/replacement as part of any renovation project.

Electrical:

The electrical system is fed from a pole mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures, pendent mount in the choir room and surface mounted fluorescent light fixtures. There are several areas in the corridor and offices that have broken or missing light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system

Replace all exterior windows-single pane

Replace exterior windows

Repair interior walls & repaint

Replace inoperable water fountain

Replace light fixtures

is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC - Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

Replace broken/spalled concrete

Renovate restrooms for ADA compliance

RHS Quintana Building

Constructed: 1970 Permanent SF: 8,788 GSF

Facility Notes and Comments:

The Quintana Building consists of 8,788 square feet and was constructed in 1970. This facility is located next Marr Gym across the street from all of RHS's other academic buildings and is used for "D" Level SPED and support services. An evaluation of the campus, revealed opportunities to bring the students into the Main Academic Building with some modifications to be more inclusive. As part of the district's effort to reduce unneeded square footage as of the 2017/18 school year, this facility has been identified for demolition.

Quintana Building

Site:

The three-story building does not have an elevator; however, it has three primary access points, one entrance that directly access's the 3rd floor (which is used for SPED) from 4th Street, the second is from an access ramp to the south side of the 2nd floor, and the lower level can be accessed from the parking lot on the north side of Marr Gym. The concrete sidewalks/ ramps around the Quintana Building have several areas of spalled surfaces, uneven settlement, and cracks due to age that need to be replaced to prevent tripping. The hand/guard rails for the 2nd floor access are in poor condition, as well as the adjacent retaining wall on the south side of the building which needs significant repairs. Grading, drainage, and landscape improvements are needed around the entire building.

Replace exterior windows

Structural/Exterior Closure:

Originally constructed in 1970, the Quintana Building has not undergone any additions, however a portion of the second floor was converted into a locker several years ago, but is no longer used. The three-story building was constructed

Replace exterior wood panels & lighting

with concrete footings, stem walls and partial crawl space. There are several areas where the building experiencing settlement and damaging interior walls. The exterior walls consist of CMU with a light-colored brick veneer which needs joint maintenance, repairs, and tuck-pointing and decorative wood siding that also needs replacement as it is damaged/ rotted in several areas. The roof consists of a standing seam metal roof system that was replaced within the past five years with metal soffit/fascia panels, and gutters with downspouts on the west side of the building only.

Exterior doors and frames are hollow metal, doors are a combination of solid panel and partially glazed doors at the main entry areas. All exterior doors and hardware need to be replaced as many are damaged or missing door hardware, and automatic door openers need to be replaced to meet accessibility requirements. The exterior windows are double-glazed aluminum with a combination of fixed and operable windows, most with broken seals, warped frames, and damaged screens all needing replacement.

Interiors:

The interior walls consist of wood/metal stud framed walls with painted gypsum board and are in fair condition with several areas needing repairs and repainting, including installation of corner guards to reduce future damage. The interior stairwells that are used to access the other floors need to have debris cleaned up and handrails installed in areas where they are missing or added to areas in which only one rail exists. The interior hollow metal door frames and the interior wood doors and hardware are also in fair condition.

The flooring throughout varies with vinyl composition tile in the entry area, corridors, some classrooms, and locker room. There is also carpet that needs to be replaced in the 3rd floor SPED classrooms. The flooring in the restrooms and shower areas is ceramic tile w/ ceramic tile wainscoting and sealed concrete in the mechanical/janitor rooms and on the lower level storage room.

The ceilings throughout consist of two types: painted gypsum board, and 2'x4' suspended ceiling tile system. There are some stained ceiling tiles are in several locations from previous roof leaks. The remainder of the ceiling system is in fair to good condition and just requires replacement of damaged/stained tiles.

Replace water fountain

Mechanical/Plumbing:

Heating for the facility is provided by a gas fired furnaces that are of varying ages and condition; a cooling system is not in place. The entire building needs a complete new HVAC system along with a new facility-wide central control system, and should include testing and balancing of all the HVAC units once complete. The exhaust fans in the restrooms and locker rooms require replacement, as they are minimally operable and do not provide adequate ventilation.

Restroom renovations including complete plumbing fixture replacement and reconfiguration for ADA compliance is needed in the building's two single occupant restrooms. The water fountains throughout are of multiple ages and condition, with a majority of the facility's water fountains needing to be replaced. **Electrical:**

Furnace upgrades needed

The electrical system is fed from a pole mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures and surface mounted fluorescent light fixtures. There are several areas in the corridor and offices that have broken or missing light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

RHS Career Education Building

Constructed: 1975 Permanent SF: 24,451 GSF

Facility Notes and Comments:

The RHS Career Education Building consists of 24,451 square feet and was constructed in 1975. Several years ago, the former Home Ec classroom and adjacent classrooms were converted into a "School Based Health Clinic" (approximately 3,400 SF). The remaining classrooms and shop areas are all in need of renovation and upgrades to meet programmatic requirements. The facility is located on the south west side of the campus next to the Patio Building and tennis courts.

Site:

The north side of the building has roll-up door to access the various shop

Stove is not properly vented

Install transition strip

Install stainless changing table

Career Education Building

Replace broken/settling sidewalk

areas to allow for exterior work space and delivery of large materials. The concrete sidewalks around the building have several areas that are spalled, settling, and cracked that require replacement to prevent tripping and meet to ADA requirements. The egress exit from the south side of the building from the corridor has a concrete stoop with steps that are spalled and do not have handrails. Overall, the site drainage is adequate; however, there are some areas around the building perimeter that are in need grading and drainage improvements, particularly between this facility and the adjacent Patio Building to the east.

Structural/Exterior Closure:

The Career Education Building was constructed with concrete footings and a built-up foundation pad; there is a stone made retaining wall system in place along a portion of the west and south sides of the facility. The structural system consists of concrete columns and beams frames with infill masonry shear walls act as the main lateral system of the structure with a pre-cast, pre-engineered double tee concrete panel system for the roof. The exterior walls are fluted concrete vertical facing panels around the perimeter of the building that has some areas that need repair and the entire exterior needs to be repainted. The facility is currently experiencing settlement in several areas and the district recently had Chavez-Grieves Consulting Engineers complete a structural assessment report for this facility that identifies multiple areas of repairs and reinforcement needed from the foundation and the exterior walls.

The roof consists of a standing seam metal roof system that was replaced in approximately 1996 with metal soffit/fascia panels. The roof has several areas where leaks are persistent, many of which have been coming from the facility's skylights, as well as areas that have had poor flashing maintenance on the roof. The connecting covered walk-way to the Patio Building also needs roof replacement. The facility has several skylights that need replacement as they are also original, some are broken and have had multiple issues with leaking.

The exterior doors frames are hollow metal throughout the facility, with exterior hollow metal doors that are either solid panel or have glazed inserts, and in poor to fair condition with damaged doors and hardware. All of the main entry points lack vestibules and the automatic door openers need to be replaced. Overhead coiling doors are installed in the auto, wood, and metal shop areas to allow for big project access and material delivery. The exterior windows consist of fixed double pane operable window systems with insulated aluminum frames along the west side of the building all of which need replacement.

Interiors:

The interior partitions are a combination of painted CMU, wood/metal stud framed walls with painted gypsum board and are in fair to good condition, with several walls and ceilings needing repairs and corner guards installed. Flooring throughout the facility is fair condition and consists of multiple systems: vinyl composition tile in the corridors and classrooms; is vinyl composition tile w/ ceramic tile wainscoting in the restrooms, and sealed concrete in the shop areas that need re-striping around the work areas around equipment. The interior door frames are hollow metal with fire-rated solid wood doors and all classroom

Extend handrails at steps to meet current code requirements

Improve drainage around building perimeter

Repair concrete panels & repaint

Repair water damaged ceilings & repaint

Install Dust Collection System on all Equipment

doors have vision panels. The ceilings throughout consist of three types: painted gypsum board, 2'x4' suspended ceiling tile system, and exposed structure in the shop areas. There are some stained ceiling tiles in several locations and areas of gypsum board damage from previous roof leaks that need repairs. The ceilings in the restrooms, and storage areas have painted gypsum board with either surface mounted or recessed lighting.

Mechanical/Plumbing:

The HVAC system for this facility was upgraded in 2011 with a boiler/ chiller system. Heating and cooling is distributed is through above ceiling ductwork and gas-fired radiant heating is used in the shop classrooms. Conditioned air is distributed is through above ceiling ductwork throughout the facility except for the shop classrooms. Ventilation in the shop classrooms needs upgrades and improvements. The wood working equipment in the Wood Shop needs to be connected to a central vacuum system, while in the Welding Shop only some of the welding stations have exhaust ventilators in place (most are in operable) and more are needed, and additional ventilation is needed in the Small Engine Repair Shop to exhaust fumes.

Restroom renovations are needed including plumbing fixture replacement and reconfiguration for ADA compliance is needed. The water fountains throughout are also in need of replacement.

Electrical:

The electrical service to the facility is provided by a 300 KVA., 120/208V., pad mounted transformer, 4-wire power to the facility. While the facility's primary service has been upgraded, the secondary service for facility may need to be upgraded to meet future programmatic and technology requirements. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures, pendent mount light fixtures in the shop areas and surface mounted fluorescent light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does have fire sprinkler system in place which while the fire riser was upgraded in 2013, may still be required to be upgraded under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

Replace all welding equipment hoods - Non Operable System

New boiler system

Restroom renovations need to comply with ADA

Provide fencing around equipment

Replace exterior doors, frame & hardware

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

Repair settlement cracks

RHS Marr Gym

Constructed: 1983, Addition 1997

Permanent SF: 44,323 GSF

Facility Notes and Comments:

The RHS Marr Gymnasium was constructed in 1983, and in 1997 a locker room/ field house addition was constructed on the northeast side of the building which now consists of 44,323 SF. Marr Gym is located on the east side of 4th Street on the lower half of the campus near the athletic fields. The facility serves as the school's primary gym for both physical education and athletics, as well as is the main kitchen for the school with student dining at the main level lobby area.

Marr Gym - Repaint metal handrails

Site:

The primary entry to the Main Gym is from the southwest corner of the building. Student can access the gym via either a stairway or ramp that leads down the hillside from 4th Street. Both the stairway and ramp are in need of repairs and new handrails that meet current code/ ADA requirements as the existing concrete is broken/ spalled in several areas. The retaining wall in this area is also experiencing settlement issues and needs to be repaired. Marr Gym is surrounded by parking areas, access roads, concrete walkways, and landscaping. This portion of the site has a large developed main football with track, two areas of tennis courts and to the far north of the site is the school's baseball field and practice football/soccer field. There have been many problems reported with the lift-station near the "Cardinal Alley" restroom and it needs replacement.

Repaint stucco & re-color coat

There are two parking areas on the north and south sides of Marr Gym, and all paved areas need various levels of repairs, resurfacing or top coat and re-striping. On the north side of the gym is an access stairway that leads from the parking lot to the main entry level of the gym that does not have handrails. There are sections of fencing around the perimeter of this portion of the site that need to replaced and expanded.

Repair [saving & resurface

Structural/Exterior Closure:

Marr Gym is a multi-level gymnasium structure originally constructed in 1983 with a field house addition constructed in 1997, with no structural upgrades visible. Skylights run parallel to the deep long span pre-engineered steel joists. The gym's roof structure is a flat long span steel joist framed system supported on cast in place concrete beam and column rigid frame with infill masonry walls and a modest number of steel columns. The floors are structured including the gym floor with a crawl space. The structure is steel joist, metal deck with

Repair/repaint walls & install handrails

concrete finish floor for the wood floor. The ground floor is a framed structural floor consisting of open web steel joists with metal deck and concrete slab cast over the deck. The field house is most likely slab on grade with continuous and spread footings. The ground floor supports the wooden gym floor. The upper floors are framed concrete elevated slabs that support the gym's expandable bleacher seating system. Concrete columns and beams support the elevated cast in place system.

The exterior walls consist of a combination of metal wall panels and stucco system that needs repairs in many locations including replacement wall panels, stucco patching with new color coat and joint maintenance around all wall openings and along the building perimeter. All of the exterior metal trim needs repainting and/or maintenance. There are two roof systems in place - standing seam metal roofing at sloped areas (1983) and a fully adhered TPO roof system that was last replaced in 2005. Both roof systems over the years have experienced multiple leaks, many of which have been coming from the facility's original skylights as well as areas that have had poor flashing maintenance on the roof. The facility has several large acrylic skylights are in poor condition and need replacement as they are also original, some are broken and have had multiple issues with leaking. Overall, the roof needs to have regular annual maintenance in removing debris from the roof drains, gutters, and downspouts including replacement of any damaged splash-blocks.

The exterior doors frames are hollow metal throughout the facility, with exterior hollow metal doors that are either solid panel or have glazed inserts, and are in fair to good condition. Several exterior doors and hardware need to be replaced as many are damaged or missing door hardware, and automatic door openers need to be replaced to meet accessibility requirements. The exterior windows on the field house addition are double-glazed aluminum with a combination of fixed and operable windows, most with broken seals, warped frames, and damaged screens, all needing replacement.

Interiors:

The interior walls consist of metal stud framed walls with painted gypsum board, painted CMU and interior acoustic metal wall panels in the main gym area. All wall surfaces are in fair condition with several areas needing repairs and repainting, including installation of corner guards to reduce future damage. The locker rooms and restrooms in the Main Gym were renovated in 2011, and are in good condition just requiring maintenance.

The kitchen for the school is located on the main mezzanine level, with student dining located in the lobby area of the mezzanine. The current configuration of the kitchen is inefficient and a complete renovation is needed including new equipment. The interior ceramic tile walls and floors are very dated, dingy and have damaged grout joints. The floors throughout main gym mezzanine area are either polished concrete, carpeting in the upper level seating areas that needs to be replaced, VCT flooring in the field house, and ceramic tile flooring in the restrooms and locker rooms. The wood gym floor was replaced in 2016 as part of an insurance repair due to roof leaks/ water infiltration. The ceiling surfaces are a combination of 2'x4' lay-in ceiling tile, painted gypsum board/plaster and

Replace damaged wall panels

Replace broken sidewalks

Replace all skylights. Multiple panels broken

Renovate dining area

Replace skylights & repair wall damage

exposed structure. Several of the ceiling areas require repairs, repainting and portions of suspended ceiling system and tiles need to be replaced.

Mechanical/Plumbing:

Heating for the facility is provided by a gas fired boiler and chiller system that was replaced in 2000 and is in good operable condition. Conditioned air is distributed is through above ceiling and exposed ductwork throughout the facility. The exhaust fans in the restrooms and locker rooms require replacement, as they are minimally operable and do not provide adequate ventilation. While the locker rooms were renovated in 2011, none of the existing restrooms have been upgraded since the facility was constructed in 1983. Many of the toilet stalls have either broken or missing doors, some lavatories/toilets do not work properly, none of the restrooms are currently ADA compliant. Restroom renovations including complete plumbing fixture replacement and reconfiguration for ADA compliance are needed throughout all levels of the gym. The water fountains throughout are of multiple ages and condition, with more than half of the facility's water fountains need to be replaced.

Electrical:

The electrical system is fed from a pad mounted 300KVA 120/208v 3-phase, 4-wire power to the facility. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures and surface mounted fluorescent light fixtures. There are several areas in the corridor and offices that have broken or missing light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does have fire sprinkler system in place which may be required to be upgraded under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to

Repair roof leak damage in dry storage room

Complete kitchen renovation needed

Non-accessible toilet area (3rd level)

Replace water fountains

Locker rooms in good condition

better monitor the building. Overall, the facility only meets the minimal ADA requirements (primarily the Main Gym) and requires improved access to the facility, interior door hardware upgrades, access, restroom renovations, and additional access/ accommodation in public areas.

RHS Media Center/Science Building

Constructed: 1997 **Permanent SF:** 9,994 GSF

Facility Notes and Comments:

The RHS Media Center/ Science Building is the campus's newest facility as it was constructed in 1997 and has not had any additions. The 9,994 square feet houses the school's media center, two computer labs, a large science lab and a small lecture room. The facility needs renovation as only very minimal upgrades have been completed in the facility over the past 20 years.

Site:

The main entrance to the Media Center is from the west side that faces the interior courtyard of the main building and amphitheater. The science lab can be directly accessed from the east side of the building which has several concrete stairs without handrails and a concrete ramp that needs guard rails upgraded. Overall site drainage around the building is in good condition, however there are a few areas that need grading and drainage improvements needed along the north and west sides. The concrete sidewalks and steps around the building are spalled, cracked, settling, and needs to be replaced. Landscaped areas include grass on the west side of the building that is irrigated.

Structural/Exterior Closure:

The Media Center/ Science Building was constructed with concrete footings and slab on grade foundation that is in overall fair to good condition, and appears to be showing signs of minimal settlement (primarily due to the age of the facility). Exterior masonry walls, steel columns and joists, and metal decking form the roof structural system. The exterior walls consist of a brown fluted and smooth faced CMU, which is in need of joint maintenance and tuck-pointing. The roof consists of a TPO single-ply membrane roof system and standing seam metal roofing with metal flashing and trim, both systems were replaced in 2015. The roof over the years has experienced multiple leaks, many of which have been coming from the facility's original skylights which were also replaced as part of the roofing project. Both the metal roofing and TPO roof systems are in good condition, however, the roofs needs to have regular annual maintenance to remove debris from the roof drains and gutters, and reseal all joints.

Exterior doors and frames are hollow metal, doors are a combination of solid panel at secondary exits and secure areas, and partially glazed doors at main entry points and exit corridors. Exterior doors are in fair to poor condition with several doors damaged or missing door hardware. Exterior windows are a combination of insulated single-hung type of operable units and non-operable units all of which need replacement. There are some areas in which glass block was installed to provide additional daylighting; in many places the glass block is either broken or are cracked, and needs replacement with an alternative type of

Media Center / Science Building

Repaint exterior metal work

Repaint ADA access curbing/sidewalk

Replace exterior windows throughout

New Roof & Mechanical Systems

translucent wall panel system to help maintain security.

Interiors:

The layout of the building is somewhat disjointed as the main entrance to the science lab is from the exterior of the east side, however interior access to this area can only be had by going through intervening rooms. Both the classroom and library finishes and built-in casework are in fair condition as majority of the casework is from the original construction and is very worn. The interior door frames are hollow metal with solid wood doors, all interior doors to occupied spaces have vision panels located in the center.

Floor finishes throughout need replacement, the carpeting is in poor to fair condition can be found in the media center, lecture hall, and computer labs, vinyl composition tile (VCT) is in the science lab and restrooms. All restrooms need major upgrades and renovation, as they are still in their original configuration, many fixtures are not operable, and are not ADA compliant.

The ceilings throughout are a combination of 2'x4' suspended acoustical panels and painted gypsum board are in fair to good condition. There are many areas throughout the building that need replacement ceiling tiles in areas that have had prior roof leaks and there are also multiple places where the gypsum board ceilings have been also damaged by leaks and needing repairs.

Mechanical/Plumbing:

As part of the roof replacement project in 2015, a new HVAC system was installed consisting of a gas-fired rooftop DX combination units. Conditioned air is distributed is through above ceiling ductwork throughout the facility and is regulated by a direct digital control system. The existing restrooms still have the original plumbing and original fixtures and are not ADA compliant. Restroom renovations including plumbing fixture replacement and reconfiguration for ADA compliance is needed in the building's two single occupant restrooms. The water fountains throughout are of multiple ages and condition, with more than half of the facility's water fountains need to be replaced.

Electrical:

The electrical system is fed from a pole mounted transformer that delivers 120/208v 3-phase, 4-wire power to the facility. Lighting throughout is a combination of 2'x4' lay-in fluorescent light fixtures and surface mounted fluorescent light fixtures. There are several areas in the corridor and offices that have broken or missing light fixtures. A complete lighting upgrade to LED throughout will improve light quality throughout, reduce energy costs and should include replacement of all exterior building light fixtures with LED fixtures with photocells. Emergency lighting is provided in all areas and exit signage is illuminated (both with battery back-up) throughout.

Fire Protection/Life Safety Systems/Accessibility:

The fire alarm system is centrally monitored in the Main Administration Office, consisting of audible alarms and strobes in all occupied spaces and corridors, and fire alarm pulls adjacent to the exit doors have been installed. The system is activated by pull stations and is centrally monitored in the administrative office

New Metal Roof System

Replace glass block with kalwall system

and needs to be replaced. During the facility assessment, smoke detectors were visible throughout the facility but as part of any renovation project CO2 detectors will be required to be installed to meet current NM IEBC and Fire Code requirements. The facility also does not have fire sprinkler system in place which may be required to be installed under the current International Existing Building Code (2009/2015 IEBC — Level 3 Renovation) and Fire Code as part of any major facility renovation and upgrade projects. Emergency back-up lighting is also sporadic in terms of placement of emergency back-up wall packs and light fixtures.

A new security camera system (interior/exterior) is needed and to be connected to each campus building's Intrusion alarm system, as the current system has several areas where cameras are either inoperable or are missing. The intercom is a 2-way system needs replacement along with upgrades to the phone system as well as the clock system. The school does have a security system in place and needs one that is comprised of intruder alarm, motion detectors, however additional security cameras in strategic areas need to be installed to better monitor the building. Overall, the facility meets most ADA requirements but will need to be upgrades throughout to meet current code requirements.

RHS Campus FMAR's

As part of the Facility Assessment Process, the FMAR's were reviewed for the school site. All major findings have been combined with additional deficiencies identified from the FMP facility assessments into larger capital improvement projects that have been prioritized in the district's Capital Improvement Plan, with the exception of the Chorus and Quintana Buildings which have been identified for demolition. The minor findings in several areas have already been addressed and items that were not were also listed as maintenance repair needs were given to the LVCS Maintenance Department to be entered into School Dude and will become summer work projects.

Renovate all restrooms & comply with ADA requirements

Install handrails at exterior steps to meet code requirements

Replace damaged/spalled concrete sidewalks

Repair cracks at tennis courts

Stabilize retaining wall & repair ramp

Provide handrails at steps

Repair edges around track

Repair rocks at retaining wall at south side of Gym

Drainage improvements needed

Replace broken/spalled concrete sidewalks

Repair & resurface asphalt

Replace broken/damaged sidewalks

Track repairs needed at NW side

Replace handrails at steps to meet current code requirements

Replace broken/spalled concrete at main entry

Roof drainage improvements needed on north side of building

Clear exterior masonry & tuck-point

Gym interior needs to be repainted

Replace damaged/stained ceiling tiles

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | | | 2017 GO | Other | Future GO | |
|--|---------------------------|-------------------------------|-----------------------|--------------------|-----------------|--|
| School Facility/ Building | Maintenance Work Order | 2013 GO Bond Project Funds | Bond Project Funds | Funding Options | Bond Project | Facility Deficiencies & Needs |
| Robertson High School - Athletic Fields (East Campus) | Х | | | | | Repaint crosswalks on 4th Street between the Main Campus and Marr Gym/ Athletic Fields. |
| Robertson High School - Athletic Fields (East Campus) | X | | | | | Replace broken pathway lights and repaint walls along ADA walkway between upper level of 4th Street and SW corner of Marr Gym |
| Robertson High School - Athletic Fields (East Campus) | Х | | | | | Repair/replace baseball dugouts, replace torn windscreen, replace bleachers and repair hole in fence. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Construct new Auxilary Gym next to Marr Gym to replace McFarland Hall and to accommodate the closure of the Middle School |
| Robertson High School - Athletic Fields (East Campus) | | | | | X | Repair cracks/ potholes and resurface asphalt along 4th Street between the Main Campus and Marr Gym/ Athletic Fields (Need to coordinate with the City of Las Vegas for repairs to 4th Street) |
| Robertson High School - Athletic Fields (East Campus) | | | | | X | Repair cracks, potholes, resurface asphalt and restripe parking lot at north & south sides of Marr Gym and next to Stadium and replace parking bumpers. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Repair cracks and seal coat parking lot near soccer/ baseball fields and replace all damaged parking curbs. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Bus & Parent drop/pick up areas need to be reconfigured to improve traffic flow. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Replace spalled sidewalk crossing area between Marr Gym and Stadium. |
| Robertson High School - Athletic Fields (East Campus) | | | Х | | | Stabilize and repair retaining wall from 4th Street to the main level of Marr Gym and the southwest and northwest corners of the gym. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Site drainage improvements needed to correct ponding, erosion and improve soil stabilization around all playfield structures. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Add handrails to stairway between northwest parking lot to the main level of Marr Gym. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Replace spalled concrete areas on the southwest and northwest corners of the track. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Replace parking lot lighting north parking lot Marr Gym |
| Robertson High School - Athletic Fields (East Campus) | | | | Х | | Seal west edge of track at concrete to prevent further deterioration and potential tripping hazard. Resurface track. |
| Robertson High School - Athletic Fields (East Campus) Robertson High School - Athletic | | | | Х | | Reseed soccer & softball fields |
| Fields (East Campus) | | | | | Х | Replace lighting near baseball fields. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Repair cracks on Tennis Courts and resurface. (East and West Campus) |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Stadium Repairs: Repair cracked stucco and recolor coat. Provide covers at exposed outlets/j-boxes at SE corner of Stadium. Replace broken glass block with vandal resistant Kalwall system. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Repaint all exterior metal handrails, columns, trim around all playfield buildings and site areas. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Repair/ Replace damaged fencing at Northwest corner of Football Field |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Repaint all ADA markings in the Baseball/ Soccer Field Parking Lots. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Cardinal Alley Restroom Building: Repair cracked stucco and recolor coat. |
| Robertson High School - Athletic Fields (East Campus) | | | | | Х | Cardinal Alley Restroom Building: Replace lift station |

| Maintenance Work Order Completed X X | 2013 GO Bond Project Funds | 2017 GO Bond Project Funds | Other Funding Options | Future GO Bond Project | Facility Deficiencies & Needs Structural Investigation: To determine extent of repairs and |

| Work Order Completed X | | | Ü | | Structural Investigation: To determine extent of repairs and |
| Completed X X | | | | , | Structural Investigation: To determine extent of repairs and |
| X | | | | | stabilization required. |
| Х | | | | | Sand, primer and repaint all exterior metals including columns, flashing, trim, misc. framing and handrails. |
| Х | | | | | Clean and re-caulk all vertical joints, around wall openings and misc. wall penetrations. |
| | | | | | Install door threshold and sweep at NE football locker room. |
| Х | | | | | Repair broken goal post - east side in gym |
| Х | | | | | Steam clean ceramic tile in all locker rooms |
| X | | | | | Repair ceiling and paint over toilet in the Home Football Locker Room |
| Х | | | | | Repair leaking shower head in visitors football locker room and clean stained wall tile. |
| X | | | | | Replace broken exit sign in Girls Locker Room |
| Х | | | | | Repair corridor wall at base near NW exit from Fieldhouse. |
| | | | | | Structural Repairs: Repair facility according to recommendations contained in the building's structural report to include extensive site drainage improvements, foundation repairs and stabilization of the building, and possible hazardous material remediation. |
| | | | | X | Replace broken/ spalled concrete sidewalks around building and steps. Install new handrails at SW steps from parking area to upper level. |
| | | | | X | Replace damaged/ cracked stucco system and recolor coat. Repair damage to multiple areas including wall base, corners and all building addition connections |
| | | | | Х | Replace exterior metal wall panel system |
| | | | | Х | Replace exterior doors, frames and hardware |
| | | | | Х | Replace exterior window system |
| | | | | Х | Roofing: Replace metal and TPO roofing systems including all fascia, flashing, copings, gutters, downspouts and provide snow guards. |
| | | | | Х | Replace acrylic skylight panels with insulated panel skylight system - shed style. (1) 14x124', (3) 14'x97', (1) 13'7 x 31', (1) 13'7 x 36', (1) 13'7 x 30'10" |
| | | | | Х | Replace all exterior building lighting - LED |
| | | | | Х | Renovate kitchen in it's entirety: reconfigure for efficiency including serving lines and replace all equipment including plumbing and grease trap. Inspect water/ sewer lines and replace as part of kitchen renovation as required. Renovate cafeteria seating area near kitchen. |
| | | | | X | Renovate restrooms in their entirety all are NON-ADA. (flooring, finishes, plumbing, fixtures, lighting, partitions, accessories and ventilation) and comply with all ADA requirements. Inspect water/ sewer lines and replace as part of all restroom renovations as required. (Located on 3 floors) Repair and patch walls as needed and repaint entire interior and install corner quards to prevent future damage |

| Robertson High School - Quintana Building | | | | | | Install security camera system (interior/exterior) and connect to central monitoring system. |

Capital Improvement Costs:

The costs on the following pages are for renovation of the multiple facilities on the RHS campus based on the approved Board of Education's "Right Sizing Plan" that will consolidate the students from Memorial Middle School to this facility including demolition of facilities that are no longer needed such as the Chorus & Quintana Buildings (both demolition and renovation costs for these two buildings have been included).

square foot campus that houses 697, rds buildings. Originally constructed in 3th through 12th grade students and a staff of 73. The campus is made up of leght buildings, including general classroom, media/science, gym, Vocation 936, there have been additione between 40st and 40 Robertson High School is located at 5th Street and Friedman in Las Vegas, New Mexico, and falls within the Las Vegas City School District. It is a Facility Description

idap spaces). Paved areas are in fair condition and require. Site drainage is adequate. han Site: The site is approximately 24 acres and includes an athletic field and a stadium. The school has a parking capacity of 400 (20 are I surface improvements. Concrete sidewalks are in fair condition. Landscaped areas include grass and gravel, and these areas are inrigated.

1936, there have been additions between 1951 and 1997. There are 0 portable facilities on site. To most accurately capture repair costs,

complex is split into

metal and windows are operable, double-pane units with tlement. The typical building structural system uses brick, Mollow 5 ally ama signs of DOIS block, and steel. Typical roofs are metal and most of them were replaced in 1996; they are not leaking. Exterior Structural/Exterior Closure: The main buildings typically rest on spread footing foundations that are showing no

and interior wall finishes are generally in good condition. Most ceilings are lay-in All interior doors are so last pain Interiors: Partition wall types are both painted concrete block and painted drywall. The facilities we acoustical tile that was replaced in 1996. Flooring in all areas is vinyl composition tile,

ducts. Fresh air is supplied through air handling units and infiltration. Exhaust fans are plentiful and bathroom ventilation der buildings, but fixtures and piping are original in the newer buildings. Window HVAC units are being installed at the plant while heating and cooling is provided by rooftop units for some of the newer buildings. entra Mechanical/ Plumbing: Heating for many of the older buildings is supplied by a gas-fired boiler in the The heating distribution system is 2-pipe and ducts while cooling is distributed by ducts. Fresh air is so is adequate. The plumbing fixtures and piping has been replaced in many of the older buildings, but fix 2-story classroom buildings

27/208 V., 3-phase, 4-wire power via 200, 400, and 600 amp main panels. Branch circuits within rooms are 120/208 V. Lighting is ery backup is in corridors and emergency exit signs are typically illuminated. The facility does not have an emergency generator. Electrical: The electrical system is fed from transformers that deliver fluorescent and illumination is adequate. Emergency lighting with be

Fire Protection/Life Safety Systems/ Accessibility: The fire alarm system consists of annunciators in rooms, corridors, and other public spaces. The system is activated by pull stations and smoke detectors, and is not centrally monitored. Most of the buildings have fire sprinkler systems. Egress corridors have appropriate fire separation and interior doors on escape corridors are fire rated. The security system is comprised of cameras and motion detectors. The complex is generally handicap compliant. Educational Adequacy: Robertson High School generally meets the state general adequacy requirements. The gross square footage is adequate for the current enrollment. Adequacy deficiencies include no separate student drop-off area, incomplete farcing, and an inadequate number of projection screens. Access is not safe due to the lack of a separate student drop-off area and parking is not adequate even when considering dirt areas. There is a two-way public address system and classrooms have data ports, but classrooms do not have CATV.

Many of the buildings had a fire alarm and intercom system installed. There was one addition to McFarland Hall in 2002

DCU 03-233 and 03064; Fire alarm and intercom installations.

Capital Outlay and PSCOC for 2002 addition to McFarland Hall

Comments Section

Roadway/Parking

Top surface showing deterioration along with pot holes needing repair. Stripping is faded due to age. Signage in place. Handicap ramps from parking areas showing spalling, cracks in need of repair. Fire lanes open and clear with accessible access to fire hydrants.

Site Utilities

Exterior utilities locked and secure with hazard labels in place. Barriers in place around natural gas lines. Handles on the electrical panels on the East side of the old gym broken and in need of repair. Barrier fence on the Southwest side of the main HS building needing repair.

Playgrounds/Athletic Fields

Athletic fields in good condition and maintained. Track, football field grass along with additional fields have sprinkler system in place. Score board In place and in good condition. Weeds around the fields removed and area maintained. No safety or risk hazards found during the site survey.

Site Drainage

Down spouts in place along with splash blocks moving water away from the buildings. Ground drain grates clear of debris. Concrete swale next to the tennis court needing to have leaves and branches removed.

Sidewalks

The sidewalk in several area's is in poor condition due to cracks, missing concrete and raised edges with possible tripping hazards to students and staff. Steps on the West side of the new gym having spalling and no hand rail in place. ADA ramps in place from the street and parking area in poor condition due to spalling of concrete.

Grounds

Grounds are a mix of grass, trees and dirt. Rut's from snow removal next to the library need to be repaired. Fence needing repair next to the Main Gym building on the West side (steep slope).

Windows/Caulking

Windows are a mix of fixed and operational type units. Screens missing and damage on the main HS building. Caulking needed on the upper windows on the Choir building. Window tracks need to be cleaned and repaired. Damage glass blocks from vandalism on the Field R/R building needing replacement.

Walls/Finishes

Buildings have brick façade showing settlement cracks and missing brick. Recommend to the district to conduct structural engineer study to determine extent of cracks both on the exterior and interior of the two story HS building and the old gym building. Damage exterior walls on the career building and Choir building noted.

Entry/Exterior Doors

Exterior exit doors have damage and missing hardware on the main HS building needing repairs or replacement (possible security issue). Double entry doors on the old gym North side, frame out of square causing door not to close properly. Panic bar on the East side of the career building needing repair, door hangs up with trying to open (used as emergency exit). Weather seals in place. Handicap access doors not working due to damage or inoperative hardware.

Roof/Flashing/Gutters

The roofs are pitched metal and flat type. Water leaks from the metal roof into the interior of the second floor West side of the HS building (district trying to determine point of leak). Missing and loose flashing on the South side of the main HS building. Down spouts and gutters in place on several buildings.

Walls/Floors/Ceilings/Stairs

The interior walls in several building showing settlement cracks and damage surface wall finishes needing repairs. Suggested to the district that they conduct a structural engineer study to determine extent of damage. Damage interior walls from water leaks needing repairs. Damage interior upper walls in the new Main gym area. Ceiling tiles in several areas needing replacement due to either past or current roof leaks around the campus buildings. Stairs have handrails in place.

Interior Doors

Interior door closures in place along with hardware in proper working condition. No broken or missing

window glass panes. Interior doors fire rated. Door seals in place. Handicap door hardware addressed on the Exterior doors section of the FMAR.

Restrooms

Interior of the R/R are clean but showing there age with damaged walls in several areas. No hot water to several of the R/R with hand wash fixtures not working or needing to be reattached. Damage stall panels in the R/R in the old gym area needing repair. Several light fixtures needing bulbs and lens covers.

Housekeeping

The interior of the custodian closets needing to be organized with hazard paint containers removed and stored in proper locations. MSDS books available to custodians and staff. Blinds need to be either removed or repaired with dusting needed on vents and window sills. Trashcans both on the interior and exterior of the buildings. Equipment available to custodian for waxing, and carpet cleaning.

Elecrical Distribution

Several areas have major findings due to missing blanking cover on circuit breaker electrical panel located in the original gym building mechanical room allowing direct access to the main buss bar. Circuit breaker in the kitchen area has circuit breaker double wired (code and safety issue). Recommend review. Open wire leads in the mechanical room South side of Admin offices near the forced air heater unit.

Lighting

Exterior and interior light fixtures in place. One exterior light on the North side of the HS building needing sensor adjusted due to being on during the day light hours. Several emergency lights tested and found non operational. Several interior light fixtures needing either bulbs or ballast replacements.

Fire Protection Systems

Fire protection drop box's, fire extinguishers in place along with main fire panel in normal status. Several fire extinguishers with outdated certification in the boiler room of the HS. Emergency lights tested for proper operation and found to be non operational in several buildings. District Rep so noted this problem. Fire suppression system in the kitchen with current cert. Sprinkler system in the main gym area.

Equipment Rooms

Equipment rooms clean with no storage items blocking access to equipment for repairs or PM.

Heating/Cooling/Ventilation

Heating and cooling are a mix of RTU and ground units around the campus. Heat is supplied via boilers or forced air heaters. Window A/C units being used on the main HS building. Covers needing to be reinstalled on several units during the site survey. Boiler cert. posted in one area but not found in the HS boiler room, district indicted that they have copy in main office.

Air Filters

Filters in place on the air handler units. The forced air heater filters needing to be changed out due to being dirty. District indicated that filters are on order. Suggest that they date filters when last installed.

Kitchen Equipment/Refrig

Kitchen area clean and maintained. Condensor units starting to frost up with coils needing cleaning. Fire suppression system in place with current cert. date. Storage items organized. Hood has current inspection cleaning sticker posted. Refrigerators and freezers running at proper temp. Lighting system over hood area working as designed.

Plumbing/Water Heaters

Plumbing labled with gauges working in the mechanical rooms. Eye wash stations tested for proper operation, one station showing water orange when tested. No hot water to hand wash sinks in the Main gym area.

THIS PAGE IS INTENTIONALLY BLANK

4.1.9 – District Central Administration Office

 Site Acreage:
 0.52

 Constructed:
 1927

 Permanent SF:
 20,080

Facility Notes and Comments:

The Las Vegas City Schools Central Administration Office is located at 901 Douglas Avenue, and was the former home to the US Post Office and the San Miguel County Courthouse nearly 90 years ago. It is unknown as to exactly when the LVCS acquired the property but is presumed to be within the past 10-12 years. The facility has

two-stories plus a full basement which still contains the original boilers from when the building was constructed. The basement has a large mechanical room, storage room and some offices that were formerly used by both the Post Office and the County Sheriff. The upper two floors of the facility maintain a lot of the original vestiges of the former Post Office and Courtroom. The first floor is currently used as offices for the district's finance department and support services. The second floor houses the remaining administrative staff, Superintendent's Office and the Board of Education Room, which is located in the former old courtroom. As a historic building, all previous renovation efforts worked hard to maintain the historic integrity of the building from the exterior to the interior and have set the level of refurbishment that needs to be maintained.

- Historic integrity criteria as defined by the National Register 1) location; 2) design; 3) setting; 4) materials; 5) workmanship;
 6) feeling; and 7) association. (Note: A resource must have retained at least three of the seven aspects to have integrity).
- A clear architectural style representative of the time period in which it was constructed.
- A uniform level of architectural detail throughout the entire structure.
- A unique form or structure (like a Silo building)
- Decorative finishes/materials integrated in the entire façade.

Site:

Located on a .52 acre lot the district's Central Administration office has very limited off-street parking located on the south side of the building, additional parking available is located along the street for staff and visitors. The south parking area's pavement is deteriorated and needs to be repaired or replaced, with new striping. The sidewalks that surround the building and are used to access the building are worn, settling, and have areas of spalling on the north and east sides of the building as well as exterior stairs need to have handrails installed or replaced. All sidewalk

Main Entry to Building

Side Entrance to Building - Broken Sidewalks

Rear Parking Lot Access Deteriorated Stairs/ No Handrails

Roof Drain Discharge - water does not flow away from building

repair/replacement projects need to be coordinated with the City of Las Vegas.

Structural/Exterior Closure:

The three story facility was constructed in 1939 with concrete footings, columns, and stem walls with a slab-on grade foundation that appears to be showing signs of settlement particularly along the west side of the building (primarily due to the age of the facility); exterior masonry walls, steel columns and joists, and metal decking form the roof structural system. The exterior walls consist of CMU with a red brick veneer, which is in need of joint maintenance, repairs of broken brick and tuck-pointing. The bricks surround the chimney stack are very deteriorated and requires restoration before additional damage occurs. The exterior walls also have stone lintel corners and courses, key courses, stone cornice; and decorative stone panels and inlays around the perimeter. All of the building's exterior particularly under the windows and at the corners that are in need of crack repairs and resealing to maintain the historical integrity of the building system. There are also several areas that have exterior wall penetrations that require sealing to protect the building from moisture infiltration.

The roof consists of a TPO roof system that was recently replaced in 2015, is in good condition. The roof has some areas of soft spots and bubbling; and where the TPO material is loose at the vertical corners. There are several areas where the stone parapet caps, wood trim and soffit panels are deteriorating and require maintenance and refurbishment. The roof drains both on the roof and at the ground level discharge point need maintenance.

Exterior doors and frames are a combination of the original wood doors and hollow metal doors with an automatic door opener at the main entry, and several doors that have broken or deteriorated door hardware. Any replacement or refurbishment of the exterior doors needs to maintain the historical integrity of the building. The exterior light at all of the building entrances are from the building's original construction and need to be upgraded restored

The exterior windows consist of original wood framed window units, that have had a secondary glazing system installed and are combination of single pane glazing with both fixed and partially operable units. All of the building's windows have areas of broken seals and sealants that are deteriorated and need maintenance in the short term. In order to maintain the historical integrity of the exterior of the building, the window units need refurbishment including either restoration/repair of all rotted wood frames/ sills.

Interiors:

The interior walls are a combination of wood stud framed walls with painted gypsum board or plaster, with some areas having wood paneling and wood chair rails. The interior walls have several areas that are worn, need minor repairs and repainting. The interior wood door frames and transoms are original, and are in relatively good condition, however have been painted and also need minor repairs and refurbishment. Most of the original wood doors are still in place including glazing and hardware. The door hardware may need to be replaced to meet ADA access requirements in select locations.

Deteriorated Parking Lot Paving - Rear

Wood Windows Need Refurbishment/ Caulking

Masonry Restoration/ Cleaning Needed

Masonry Restoration/ Cleaning Needed

Roof Drains Clogged

The flooring throughout varies with the "ground floor" having large marble inlays with a red unglazed paving tile in the main lobby area, and the offices having carpet over wood floors, and vinyl composition tile in the break room, and restrooms. Carpeting covers most of the original wood flooring in the offices on both the upper floors and a painted concrete flooring in the restrooms. The basement has a combination of carpeting in the office areas and unsealed concrete in the storage and mechanical rooms. There were several areas observed that may still contain the original vinyl asbestos tile which was in poor condition. The original wood wainscoting, wood moldings and paneling needs to be refurbished throughout.

The ceilings throughout consist of three types: painted plaster, 12"x12" adhered acoustic tiles and 2'x4' suspended ceiling tile system. There are several areas where the ceiling tiles are stained from roof leaks and need to be replaced. A combination of vertical and horizontal blinds cover the exterior windows in the offices areas, and many are in need of replacement. The main stairwell consists of the original marble flooring, decorative steel railings, and wood banister on one site and are in worn but good condition, however they require extensions at each landing to meet current code and safety requirements. The new extensions should be designed to match the existing design.

Mechanical/Plumbing:

Heating is supplied by a boiler system located in the basement that was replaced in 2015, however the ground mounted cooling system with aging ground mounted condensers was not replaced nor is energy efficient. There are often issues in the ability to maintain air temperature in the offices due to the delivery system of the radiators which often have multiple maintenance issues and the need for better delivery of cooled air; a mechanical study is recommended to evaluate the building to determine areas of improvement. There are several areas in which the ductwork has been modified to supply reconfigured areas that is nor efficient.

The water supply within the building is assumed to be galvanized piping that ranges in size from ¾"-2", there are some small areas that have been replaced with copper as part of minor renovations and repairs. The sewer line is assumed to be cast iron and over the course of the buildings life, there have been multiple issues with the sewer lines within the building and will require further examination as to their ability to be reused as part of any renovation process.

Restrooms are located on each floor of the building with two sets restrooms on the ground floor, one near the employee break room and two single occupant restrooms near the elevator that are considered the building's "public" restrooms were renovated many years ago. The existing second floor restrooms still have the original configuration, including the original toilet partitions, lighting, flooring and plumbing fixtures, as well as are not ADA compliant, including the single occupant restrooms. While the restrooms over the past 87 years have undergone some upgrades, all are in need of complete renovation/ restoration and ADA upgrades where possible and may include replacement of the original water and sewer lines.

Electrical/Lighting:

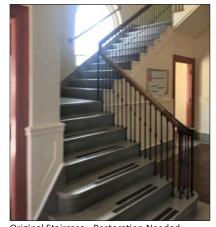

The building's electrical supply is fed from a 300KVA ground mounted transformer that provides 120/208 V, 3-phase power to the building. While over the years

Main Lobby Area - Needs Restoration

Basement Work Room & Elevator

Original Staircase - Restoration Needed

Board of Ed Room - Restoration Needed

the building has undergone some partial secondary service upgrade, there are still several electrical panels in use that operate with glass fuses. The wiring throughout much of the building is old, with some areas still having the original light switches in place, a complete secondary service upgrade is needed.

Lighting throughout is a combination of the original pendent mounted fluorescent light fixtures, newer 2'x4' lay-in fluorescent light fixtures and some areas with incandescent bulb fixtures. A complete lighting upgrade to LED will improve light quality throughout and reduce energy costs. Care needs to be taken throughout to refurbish the existing historical light fixtures both interior and exterior as part of the lighting upgrade.

Fire Protection / Life-Safety Systems / Accessibility:

Currently the building does not have a fire alarm system in place throughout. A new fire alarm system that is centrally monitored, complies with current code and consists of smoke detectors, audible alarms and strobes in all occupied spaces and corridors, fire alarm pulls on each floor and adjacent to the exit doors needs to be installed. At the west end of the BOE room there is an exterior emergency stairwell that needs to be evaluated for compliance as an emergency exit. Additional exit signs are needed throughout as many are more than 50 years old and the emergency back-up lighting also needs to be upgraded. The building does not have a fire sprinkler system which may be required under the current International Existing Building Code (2009/2015 IEBC – Level 3 Renovation) as part of any major facility renovation.

It does not appear that the interior corridors are fire rated, nor are the building's janitor closets, electrical and mechanical rooms as walls in several areas do not extend up to the underside of the ceiling/roof deck. None of the interior corridor doors and frames are fire rated as many have glazed vision panels and transoms. The elevator appears to be an older model, and should be refurbished to meet current code and ADA requirements.

Hazardous Materials:

Due to the age of the building there is potential for some areas to still contain hazardous materials such as asbestos VAT flooring (which was observed in a deteriorated state), wall base, 12"x12" ceiling tiles, mastic, insulation, plaster, pipe fittings, the old boilers in the basement, etc., or contain areas of lead paint. A complete Hazardous Material inspection report and remediation plan is recommended prior to any renovation/ restoration of the facility.

Original 1927 Restrooms - Restoration Needed

Original Plumbing Fixtures

Need Updated Exit Signage

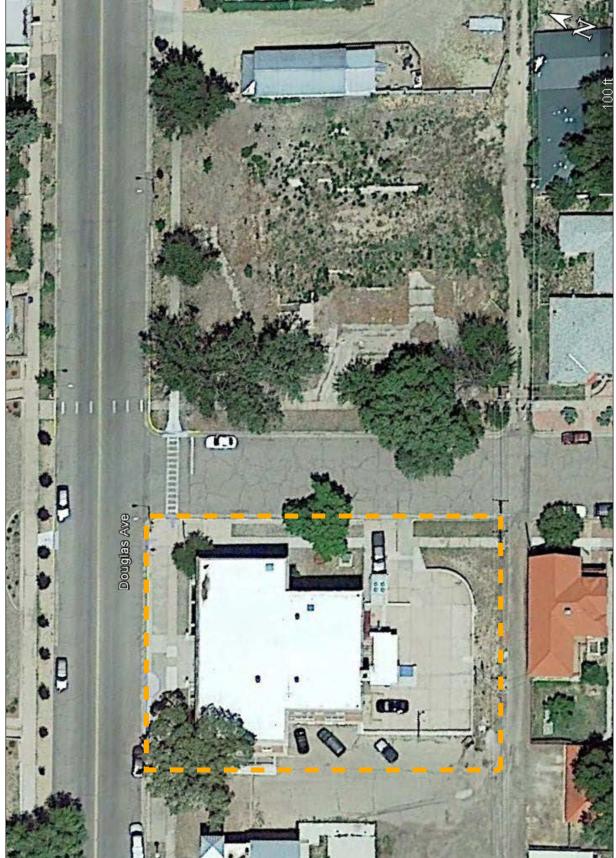

Original Boilers Remain - Non-Operational

Original Panels Remain With Glass Fuses

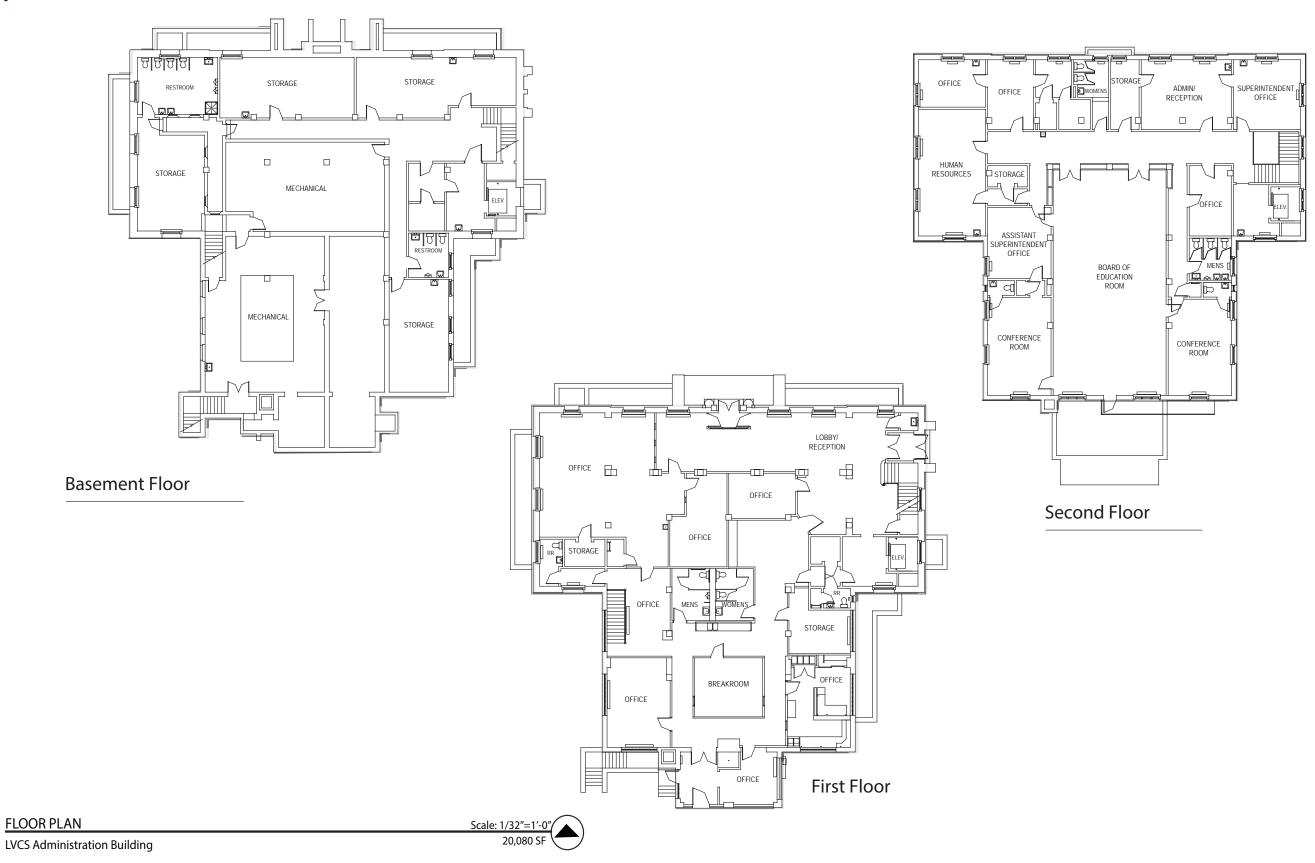

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | Maintenance | 2013 GO Bond | 2017 GO Bond | Other Funding | Future GO Bond | |
|-------------------------------------|-------------|-----------------|-----------------|------------------|-------------------|---|
| School Facility/ Building | Work Order | Project | Project | Options | Project | Facility Deficiencies & Needs |
| LVCS Central Administration Office | X | | | | | Structural Investigation: There is settlement occuring along the south and west sides of the building, a structural review is needed to determine necessary repairs that are in keeping with the historic requirements for this facility. |
| EVC3 Central Authinistration Office | ^ | | | | | Roof Maintenance: Clean and remove all roof debris and unclog all |
| LVCS Central Administration Office | Х | | | | | roof drains. Repair and/or replace cracked concrete/ asphalt in parking lot and |
| LVCS Central Administration Office | | | | | Х | restripe |
| LVCS Central Administration Office | | | | | Х | Replace cracked and spalled concrete sidewalks and entryways Install ADA curbcuts at sidewalks - Coordinate with the City of Las |

4.1.10 - District Maintenance Complex

Site Acreage: 2.1 Acres

Constructed:...... 1962, 1974, 1995

Permanent SF:..... 18,219 GSF

Facility Notes and Comments:

The LVCS District Maintenance Complex is located across from Robertson High School along 4th Street. All the district's maintenance and transportation personnel are assigned to this facility. The Maintenance Complex consists of 5 buildings, with the main building in need of upgrades as there have been very few completed over the past 20 years.

Site:

The Maintenance Complex consists of a 2.1-acre site adjacent to the RHS Marr Gym and is fenced with razor wire bordering the top. The site houses one main maintenance shop building and four smaller warehouse and repair buildings which are in poor to fair condition and should be considered for demolition. District's buses are stored within the maintenance yard when not in use, there are several exterior storage areas used to store excess equipment. The remainder of the site is paved asphalt and there is no landscaping. There are two parking areas along the west side of the main Maintenance Shop along 4th Street and in the maintenance yard. All paved areas need various levels of repairs, resurfacing or top coat and re-striping. The concrete sidewalks around the building have several areas that are spalled, settling, and cracked that require replacement to prevent tripping and meet to ADA requirements.

Facility:

The main maintenance shop and office area consists of 5,697 square feet and has three open bays for vehicle, bus and machinery maintenance and storage, an office area with restrooms, and a secured storage area. The metal building has a masonry front façade with walls that are minimally insulated and exterior metal wall panels around the remainder of the building. The exterior metal building panels are showing signs of rust, deterioration and have areas that need replacement/repair. There are three overhead coiling doors along the south side of the building to allow for mid-to large vehicles access to the building as well as regular door entryways with hollow metal doors and frames.

The vinyl composition tile in the administrative office area is poor to fair condition as there are several areas in which tiles are chipped and broken and the carpeting needs to be replaced. The remainder of the facility has concrete floors that appear to be in good condition throughout and all ceilings are exposed structure with suspended light fixtures. Skylight panels that are part of the metal roof provide some daylight and the building has adequate electrical supply for maintenance repair needs.

Heating is provided by gas-fired ceiling-hung units in the open bay area, and by wall-mounted gas fired heating system in the office area. Cooling in the office area

Resurface parking lot

Repair/replace damaged overhead doors

Due to amount of flammable material, a separate room enclosure may be required code analysis

is via through-wall mounted evaporative cooling units that need to be replaced. There is no mechanical cooling in the open bay. The building does not have a fire sprinkler system in place and may be required in the event of a major renovation. There is both a fire alarm system with annunciators and strobes in place as well as an intrusion alarm system for security.

Repaint flooring

Upgrade HVAC system

Replace exterior windows

Re-stripe flooring to meet OSHA requirements

Replace VCT

Restrooms in good condition but ADA upgrades needed

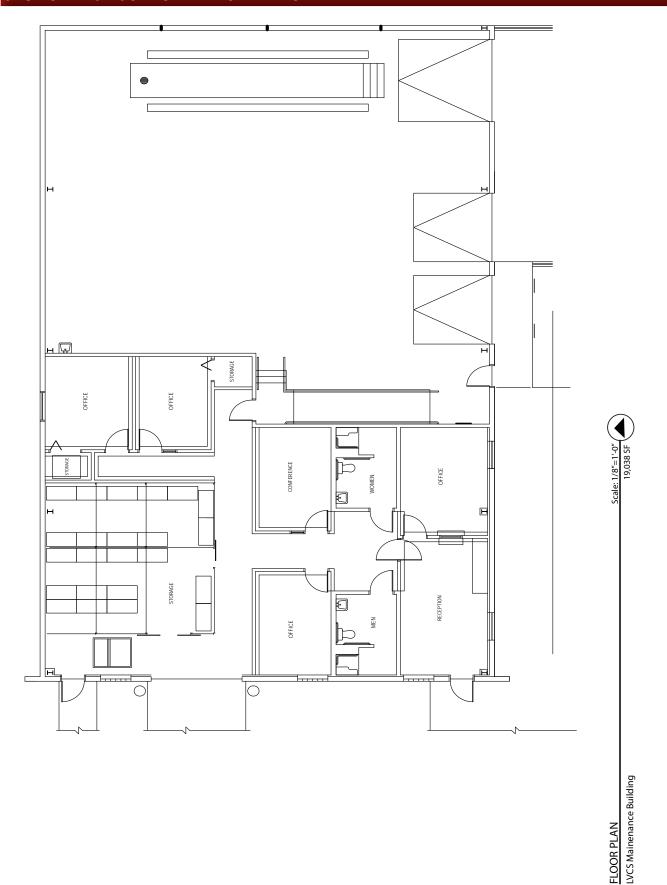

Replace VCT

Site Plan - District Maintenance Complex Las Vegas City Schools

Capital Improvement Needs:

Based on the Facility Assessments in April 2016, the following Capital Improvement Needs have been identified. The findings have been divided into four categories - Maintenance Work Order, Current (2013& 2017) and Future GO Bond Capital Projects and Other Funding Options.

| | | 2013 GO | 2017 GO | Other | Future GO | |
|------------------------------|-------------|---------|---------|---------|-----------|---|
| | Maintenance | Bond | Bond | Funding | Bond | |
| School Facility/ Building | Work Order | Project | Project | Options | Project | Facility Deficiencies & Needs |
| | | | | | | |
| LVCS Maintenannce Complex | | | | | Х | Replace/ Upgrade fencing |
| | | | | | ., | Grading and drainage improvements needed to provide positive |
| LVCS Maintenannce Complex | | | | | Х | drainage away from the building and reduce ponding. |
| LVQC M.: I | | | | | V | Repair cracks, potholes, resurface asphalt and restripe south parking |
| LVCS Maintenannce Complex | | | | | Х | lot. |
| LVCC Maintanannaa Camplay | | | | | v | Replace remaining misc. spalled concrete sidewalks |
| LVCS Maintenannce Complex | | | | | Х | Clean and tuck point exterior masonry, re-caulk all vertical joints, |
| | | | | | Х | around wall openings and misc. wall penetrations. |
| | | | | | ^ | Sand, primer and repaint all exterior metals including columns, |
| LVCS Maintenannce Complex | | | | | Х | flashing, trim and handrails. Replace rusted exterior wall panels |
| EVG3 Walliterlannice Complex | | | | | | Indistring, trim and haridrans. Replace rusted exterior wall pariets |
| LVCS Maintenannce Complex | | | | | Х | Replace exterior windows including blinds |
| Eves maintenannee complex | | | | | ~ | Tropides exterior windows including binds |
| LVCS Maintenannce Complex | | | | | Х | Replace exterior doors, frames and hardware. |
| | | | | | | Replace VCT flooring in the office lobby area and replace carpeting in |
| LVCS Maintenannce Complex | | | | | Х | all offices. |
| | | | | | | Repair and patch walls as needed and repaint entire interior and |
| LVCS Maintenannce Complex | | | | | Х | install corner guards to prevent future damage |
| • | | | | | | Install industrial exhaust fans in the workshop area to improve |
| LVCS Maintenannce Complex | | | | | Х | ventilation |
| | | | | | | |
| LVCS Maintenannce Complex | | | | | Х | Upgrade cooling system in the office areas. |
| | | | | | | |
| LVCS Maintenannce Complex | | | | | Х | Replace all exterior building lighting - LED |
| | | | | | | Replace interior lighting throughout to LED, upgrade all emergency |
| LVCS Maintenannce Complex | | | | | Х | back-up and exit lighting |
| | | | | | | Install fire sprinkler system throughout the entire building to meet |
| LVCS Maintenannce Complex | | | | | Х | CURRENT NM IEBC Code Requirements. |
| | | | | | | Install security camera system (interior/exterior) and connect to central |
| LVCS Maintenannce Complex | | | | | Х | monitoring system. |
| | | | | | | |
